- Arrow representing a reaction of an action*
- Arrow representing forces

* If not identical to the action arrow.

Safety instruction categories
The safety instructions alert site personnel to the risks involved and provide information on how to avoid these risks. Safety instructions can be found at the beginning of the section or before instructions for action and are highlighted as follows:

Danger
This sign indicates an extremely hazardous situation that could result in death or serious, irreversible injury if the safety instructions are not followed.

Warning
This sign indicates a hazardous situation that could result in death or serious irreversible injury if the safety instructions are not followed.

Caution
This sign indicates a hazardous situation that could result in minor or moderate injury if the safety instructions are not followed.

Note
This sign indicates situations in which failure to observe the information can result in material damage.

Format of the safety instructions

Signal word
Type and source of hazard!
Consequences of non-compliance.
⇒ Preventative measures.

Dimensions
Dimensions are usually given in cm. Other measurement units, e.g. m, are shown in the illustrations.

Conventions
- Instructions are numbered with: 1. ....., 2. ....., 3. .....
- The result of an instruction is shown by: →
- Position numbers are clearly provided for the individual components and are given in the drawing, e.g. **1**, in the text in brackets, for example (**1**).
- Multiple position numbers, i.e. alternative components, are represented with a slash: e.g. **1 / 2**.

Notes on illustrations
The illustration on the front cover of these instructions is understood to be a system representation only. The assembly steps presented in these Instructions for Assembly and Use are shown in the form of examples with only one component size. They are valid for all component sizes contained in the standard configuration.

To facilitate understanding, detailed illustrations are sometimes incomplete. The safety equipment that might not be shown in these detailed illustrations must nevertheless be available.

Target groups

Contractors
These Instructions for Assembly and Use are designed for contractors who either
- assemble, modify and dismantle PERI systems, or
- use them, e.g. for concreting, or
- allow them to be used for other operations, e.g. carpentry or electrical work.

Safety and Health Protection Coordinator*
- is appointed by the client,
- must identify potential hazards during the planning phase,
- determines measures that provide protection against risks,
- creates a safety and health protection plan,
- coordinates the protective measures for the contractor and site personnel so that they do not endanger each other,
- monitors compliance with the protective measures.

Competent person
- is appointed by the contractor,
- must be on site for all system operations,
- prepares and updates the plan for assembly, modification and dismantling,
- prepares and updates the plan for use of the system by the user,
- supervises the assembly, modification and dismantling work (supervisor).

Competent persons qualified to carry out inspections
Due to the specialist knowledge gained from professional training, professional experience and recent professional activity, the competent person qualified to carry out inspections has a reliable understanding of safety-related issues and can carry out inspections correctly. Depending on the complexity of the inspection to be undertaken, e.g. scope of testing, type of testing or the use of certain measuring devices, a range of specialist knowledge is necessary.

Qualified personnel
PERI systems may only be assembled, modified or dismantled by personnel who are suitably qualified to do so. Qualified personnel must have completed a course of training** in the work to be performed, covering the following points at least:
- Explanation of the plan for the assembly, modification or dismantling of the system in an understandable form and language.
- Description of the measures for safely assembling, modifying or dismantling the system.
- Naming of the preventive measures to be taken to avoid the risk of persons and objects falling.
- Designation of the safety precautions in the event of changing weather conditions that could adversely affect the safety of the system, as well as the personnel concerned.
- Details regarding permissible loads.
- Description of all other risks and dangers associated with assembly, modification or dismantling operations.

- **Ensure that relevant national guidelines and regulations in the respective current version are complied with!**
- **If no country-specific regulations are available, PERI recommends that you proceed according to German guidelines and regulations.**

* Valid in Germany e.g.: Regulations for Occupational Health and Safety on Construction Sites 30 (RAB 30).

** Instructions are given by the contractor themselves or a competent person selected by them.

Instructions for Use

Use in a way not intended, deviating from the standard configuration or the intended use according to the Instructions for Assembly and Use, represents a misapplication with a potential safety risk, e.g. risk of falling.

Only PERI original components may be used. The use of other products and spare parts is not allowed and represents a misapplication with associated safety risks.

Changes to PERI components are not permitted.

The system described in these Instructions for Assembly and Use may contain patent-protected components.

Intended use

Product description
PERI products have been designed for exclusive use in the industrial and commercial sectors only by suitably trained personnel.

The VGK Console Bracket System is used for the concreting of cantilevered parapets in cantilever and abutment areas of bridges cast in-situ or constructed using prefabricated elements.

The VGK Console Bracket System system can also be used as a pure work platform, either in the standard configuration VGK 160 or in the VGK Flex configuration.

The system facilitates the forming of parapet geometries up to H/W = 100/60 cm. Work platforms and formwork units are separate. This allows the formwork unit to be readjusted to match the geometry of the parapet from the work platform.

The individual bracket consists of a standard, bracket cantilever, platform beam and spindle, and can be fixed to the bridge at variable distances to one another depending on the parapet cross-section, thus resulting in excellent load optimisation.

In the VGK Flex configuration as a work platform, a single bracket is composed of a standard, formwork girder and Kicker AV.

When used in bridge construction, the console bracket is anchored using the Anchor Sleeve M24. For refurbishment work, the console bracket can be anchored afterwards by means of composite anchoring systems.

In combination with
Suspension Head Flex VGK, two bracket discs can also be suspended from the structure as pre-assembled units. With both Suspension Head VGK and Suspension Head Flex VGK, all structural arrangements can be carried out. (Exception: VGK 70 with formwork construction at the abutment)

Features
- Platform and formwork units are separated.
- No openings or penetration in the platform decking.
- Operation and adjustment is carried out from the work platform.
- Continuous inclination adjustment of the slab and side formwork.
- High load-bearing capacity.

Technical data
- Parapet dimensions: max. H/W = 100/60 cm.
- Perm. influence widths up to 185 cm.

Additional technical documentation

- Approvals:
  – Approval No. Z-21.6-1764 Alternative Anchoring
  – Approval No. Z-21.6-1766 PERI Screw-On Cone for the Anchoring of Bracket Scaffold

- Product brochures:
  – DK, SK anchor technology – Reliable sealing of clamping points

Cleaning and maintenance instructions

In order to maintain the value and operational readiness of the formwork materials over the long term, clean the panels after each use.

Some repair work may also be inevitable due to the tough working conditions.

The contractor must ensure that the personal protective equipment required for cleaning, maintenance and repair work such as

- Safety helmet,
- Safety shoes,
- Safety gloves,
- Safety goggles,

is available and used as intended.

The following instructions should help to keep cleaning and maintenance costs as low as possible.

Cleaning tools must be adapted to the respective surfaces of the components so that they are not damaged.

Spray the formwork on both sides with concrete release agent before each use; this makes the formwork easier and faster to clean. Spray the concrete release agent very thinly and evenly!

Do not spray work platforms and access routes with concrete release agent.
Slip hazard.

Spray the rear side of the formwork with water immediately after concreting; this avoids any time-consuming and costly cleaning operations.

When used continuously, spray the formlining elements with concrete release agent immediately after deshuttering; then clean by means of a scraper, brush or rubber lip scraper.
Important: do not clean formlining made of plywood with high-pressure equipment. This could result in the formlining being damaged.

Fix recesses and built-in parts with double-headed nails; as a result, the nails can easily be removed later, and damage to the formlining is largely avoided.

Close all unused tie holes with plugs; this eliminates any subsequent cleaning or repair work.
Tie holes accidentally blocked with concrete are cleared by means of a steel pin from the formlining side.

When placing bundles of reinforcement bars or other heavy objects on horizontally supported formwork elements, suitable support, e.g. squared timbers, is to be used: this prevents impressions and damage to the formlining to a large extent.

Internal concrete vibrators should be fitted with rubber caps if possible; as a result, any damage to the formlining is reduced if the internal vibrator is accidentally inserted between the reinforcement and formlining.

Never clean powder-coated components, e.g. elements and accessories, with steel brushes or hard metal scrapers; this preserves the powder coating.
Use spacers for reinforcements with large or flat supports; this largely avoids indentations in the formlining under load.

Mechanical components, e.g. spindles or gear mechanisms, must be cleaned of dirt or concrete residue before and after use, and then greased with a suitable lubricant.

Provide suitable support for the components during cleaning so that no unintentional change in their position is possible.

Do not clean components suspended on crane lifting gear.

Cross-system

Safety instructions apply to all service life phases of the system.

General information
The contractor must ensure that the Instructions for Assembly and Use supplied by PERI are available at all times and understood by the site personnel.

These Instructions for Assembly and Use can be used as the basis for creating a risk assessment. The risk assessment is compiled by the contractor. The Instructions for Assembly and Use are not a substitute for a risk assessment!

Observe and comply with the safety instructions and permissible loads.

For the application and inspection of PERI products, observe the current laws and regulations in force in the respective countries.

Materials and working areas are to be inspected before each use and assembly, for:
- damage,
- stability and
- functional correctness.

Damaged components must be exchanged immediately on site and may no longer be used.

Safety components are to be removed only when they are no longer required.

When on slab formwork, scaffolds and working platforms:
- do not jump,
- do not run,
- do not drop anything from or onto it.

Components provided by the contractor must comply with the characteristics stipulated in these Instructions for Assembly and Use and all applicable laws and standards. Unless otherwise indicated, the following applies in particular:
- Timber components:
  Strength class C24 for solid wood according to DIN EN 338:2016-07.
- Scaffolding tubes:
  Galvanised steel tubes with minimum dimension Ø 48.3 x 3.2 mm according to DIN EN 12811-1:2004-03 4.2.1.2.
- Scaffolding tube couplings:
  according to DIN EN 74-1:2022-09 and DIN EN 74-2:2022-09.

Deviations from the standard configuration are only permitted after a further risk assessment has been carried out by the contractor.

Appropriate measures for working and operational safety, as well as stability, are defined on the basis of this risk assessment.

Corresponding proof of stability can be provided by PERI on request if the risk assessment and resulting measures to be implemented are made available.

Nails and wood screws must not protrude. Only allow other connecting components to protrude to the extent that is necessary.
If necessary, mark protruding components or fit them with protective material.
Secure all bolts with cotter pins and all screws with nuts

Before and after extraordinary events that may have damaging effects on the safety of the climbing system, the contractor shall immediately
- produce another risk assessment and make use of its results to take suitable steps to guarantee the stability of the climbing system,
- arrange for an extraordinary inspection to be carried out by a competent person qualified to do so. The aim of this inspection is to detect and repair damage in good time in order to ensure the safe use of the system.

Exceptional events could be:
- accidents,
- long periods of non-use,
- natural events, e.g. heavy rainfall, icing, heavy snowfall, storms or earthquakes.

Safety instructions

Assembly, modification and dismantling work
PERI systems may only be assembled, modified or dismantled under the supervision of a person qualified to do so and by technically suitable employees. The qualified personnel must have received appropriate training for the work to be carried out with regard to specific risks and dangers.

On the basis of the risk assessment and the Instructions for Assembly and Use, the contractor must create assembly instructions to guarantee safe assembly, modification and dismantling of the system.

The contractor must ensure that the personal protective equipment required for the assembly, modification or dismantling of the system, e.g.
- Safety helmet,
- Safety shoes,
- Safety gloves,
- Safety goggles,

is available and used as intended.

For work at a higher level, use an approved ladder or platform system, or an assembly scaffold.

If personal protective equipment against falling from a height (PPE) is required or specified in local regulations, the contractor must determine appropriate attachment points on the basis of the risk assessment.
The PPE to be used to prevent falling is determined by the contractor.

The contractor must
- provide safe working areas for site personnel, which are to be reached through the provision of safe access ways. cordon off and clearly mark danger zones.
- guarantee stability during all stages of construction, in particular during assembly, modification and dismantling operations.
- ensure and demonstrate that all loads that occur are safely transferred.

Use
Every contractor who uses or allows the systems to be used, is responsible for ensuring that the equipment is in good condition.

If the system is used successively or at the same time by several contractors, the health and safety coordinator must point out any possible mutual hazards and all work must then be coordinated.

When systems are used in publicly accessible areas,
- measures to prevent unauthorised use, e.g. enclosure of access areas, must be taken.
- Measures are taken against injuries caused by bumping against protruding components, e.g. assembly of protective components.

Always keep the contact surfaces of the system free of dirt, objects, snow and ice.
Close off the system in extreme weather conditions.

System-specific

Deshutter components only when the concrete has sufficiently hardened and the person in charge has given the go-ahead for deshuttering to take place.

Working areas situated below must be protected by means of appropriate measures.

Secure tools and materials to prevent them from falling to the ground. Remove concrete residue and other forms of dirt.

Every cantilevered parapet bracket must have its own anchoring. Loosening or removing the anchoring must only be possible from the load transfer side.

Constructional requirements regarding the use of the anchoring methods are to be taken into account.

Check that the anchor is correctly installed before concreting takes place. PERI recommends compiling an acceptance report.

Anchoring is to take place only if the anchorage has sufficient concrete strength.

Screw Anchor Sleeve M24 as far as possible on the fibre cement pipe on Anchor Posit. Stud M24 ga.

The threaded areas on Screw-On Cone-2 as well as Threaded Plates DW 20 must always be completely screwed in.

The required anchoring depth h must not be achieved through a reduction in the screw-in depth.

Avoid standing under suspended loads. If work under suspended loads cannot be avoided, come up with suitable safety measures and apply them. Avoid standing between a fixed object and an object that is drawing near.

Do not use any anchoring components and mountings in advance that are damaged.

Examples of damage:
- deformed components,
- rough or scratched cone surfaces,
- blocked threads,
- weld splashes on the threads.

Check the functionality of the slide bearings before every use. Do not use Bracket Cantilever VGK 50 if the grouting is damaged.

The contractor must ensure that there is safe lightning and current discharge facilities.

Storage and transportation

Store and transport components in such a way that no unintentional change in their position is possible. Detach load-lifting accessories and lifting gear from the lowered components only if they are in a stable position and no unintentional change is possible.

Do not drop the components.

Use PERI lifting accessories and lifting gear and only those load-bearing points provided on the component.

During the relocation procedure
- ensure that components are picked up and set down in such a way that unintentional falling over, falling apart, sliding, falling down or rolling is avoided.
- no one is allowed to remain under the suspended load.

Pre-assembled assemblies should always be guided with ropes when moving them by crane.

The access areas on the construction site must be free of obstacles and tripping hazards, as well as being slip-resistant.

For transportation, the substrate must be clean, level and have sufficient load-bearing capacity.

Use original PERI storage and transport systems, e.g. crate pallets, pallets or stacking devices.

Tightening torques

Unless otherwise indicated, PERI recommends the following guide values for screw connections as "hand-tightened" tightening torques $M_{A,hand\text{-}tightened}$.
These guide values are based on DIN EN 15048-1:2016-09 with minimum Safety Factor 3 against breakage.

Quality class	Quality 4.6		Quality 8.8 and 10.9
Lubrication	**Lightly oiled**	**MoS2**	**Undefined**
Screw M8	8 Nm	6.6 Nm	8 Nm
Screw M10	16 Nm	13.0 Nm	16 Nm
Screw M12	30 Nm	23.0 Nm	30 Nm
Screw M16	65 Nm	54.0 Nm	65 Nm
Screw M20	100 Nm		100 Nm
Screw M24	150 Nm		150 Nm
Screw M30	260 Nm		260 Nm
Screw M36	350 Nm		350 Nm

Tightening torques have been determined for the following components:

Scaffolding tube coupling	50 Nm
Clamping plate for the slab tie gauge	120 Nm

Standard use on cantilevers ≥75 cm

(Fig. A1.01)

Take into account Section A3 – System Selection.

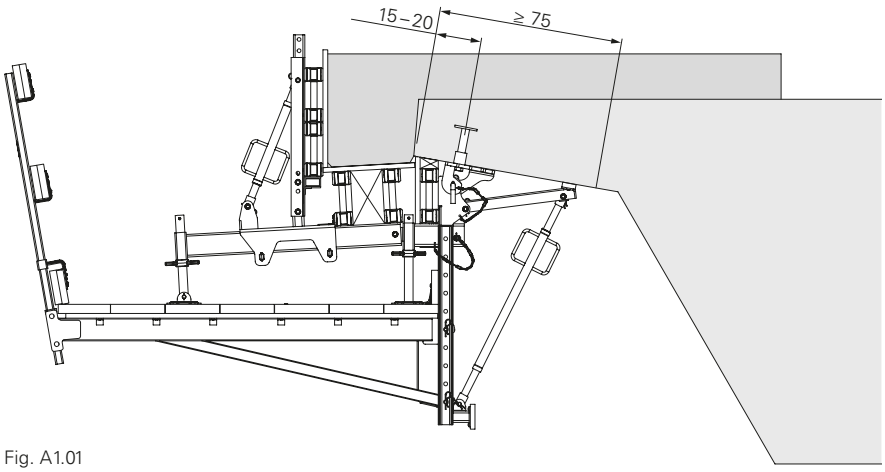

Fig. A1.01

Intermediate area on cantilevers 35 – 75 cm

- Secure Adj. Base Plate UJB 38 mm-80/55 (**9**) against falling out and unintentional twisting, e.g. Screw-on Coup.-2 HT BØ48 mm M20 (**76**) (article no.: 131404).
- The application with Adj. Base Plate UJB 38 mm-80/55 (**9**) must be calculated separately for each project.
- In the case of pressure points on sloping walls, the spindle must be verified and secured against slipping in a project-specific manner.
- If Suspension Head VGK Flex (**12a**) is used, the influence width may be limited.

With Adj. Base Plate UJB 38 mm-80/55 (**9**).
(Fig. A1.02)

Take into account Section A3 – System Selection.

A2 Load conditions

Use as formwork scaffolding

- All given loads are characteristic loads.

Working/concreting
- Set up formwork.
- Install reinforcement in the cantilevered parapet.
- Close side formwork and concrete.
- Deshuttering.
- Inspection and maintenance.

Load case for working	
Live load on the platform	2.00 kN/m²
Max. working wind speed	0.20 kN/m² (V_w = 64 km/h)

Tab. A2.01

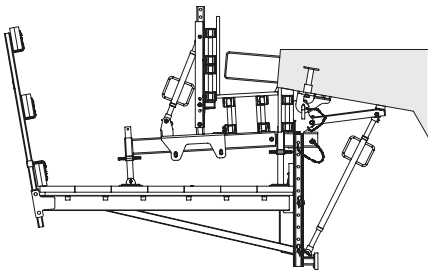

Fig. A2.01

Load Case: Concreting	
Live load on the platform	0.75 kN/m²
Max. working wind speed	0.20 kN/m² (V_w = 64 km/h)
Hydrostatic fresh concrete pressure with $\gamma_{concrete}$= 25 kN/m³	

Tab. A2.02

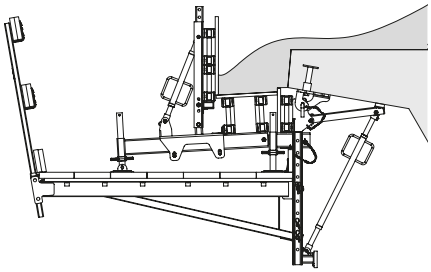

Fig. A2.02

Storm (non-operational)
During longer work breaks or storm warnings with wind speeds > 64 km/h.

- All given loads are characteristic loads.
- Implement safety measures according to Section A7.
- Remove loose materials and equipment.
- Do not access console brackets in storm conditions.
- For storm warnings with wind speeds > 111 km/h, inform an authorised person and implement separate safety measures.

Load case: Storm	
Live load on the platform	0.00 kN/m²
Peak velocity pressure $q_p(z)$*	≤0.60 kN/m² ($V_W \leq$ 111 km/h)

*Max. peak velocity pressure $q_p(z)$ including reduction for temporary construction.

Tab. A2.03

Use as Work Platform VGK 160

- All given loads are characteristic loads.
- All demolished concrete is immediately removed. No accumulation of demolished concrete.
- Secure working areas located underneath against falling objects.

Work

- Demolish existing cantilevered parapet.
- Continuously remove demolished concrete from the work platform.
- Carry out refurbishment work.
- Demolition work:
  - Demolish existing cantilevered parapet.
  - Demolished concrete.
  - Refurbishment work.
- Access for formwork work on buildings.
- Platform for reinforcement scaffolds.

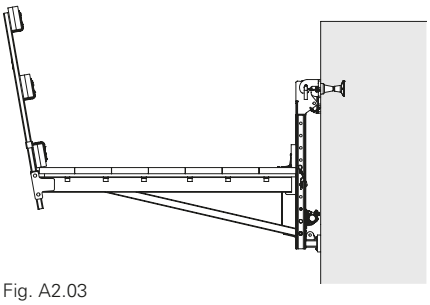

Fig. A2.03

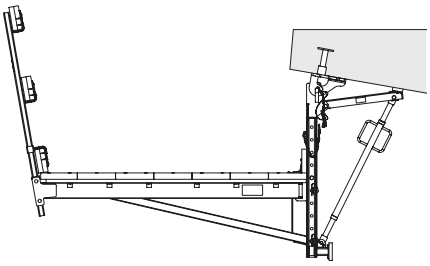

Fig. A2.04

Load case for working	
Live load on the platform	2.00 kN/m²
Max. working wind speed	0.20 kN/m² (V_w = 64 km/h)

Tab. A2.04

Storm (non-operational)

During longer work breaks or storm warnings with wind speeds > 64 km/h.

- All given loads are characteristic loads.
- Safeguarding measures, see Section "A7 Storm protection" on page 44.
- Remove loose materials and equipment.
- Do not access console brackets in storm conditions.
- For storm warnings with wind speeds > 111 km/h, inform an authorised person and implement separate safety measures.

Load case: Storm	
Live load on the platform	0.00 kN/m²
Peak velocity pressure $q_p(z)$*	≤0.60 kN/m² ($V_W \leq$ 111 km/h)

*Max. peak velocity pressure $q_p(z)$ including reduction for temporary construction.

Tab. A2.05

Use as Work Platform VGK Flex on structures

- All given loads are characteristic loads.
- Secure working areas located underneath against falling objects.
- Can also be mounted on sloping walls.

Work

- Material/equipment with low loads can be parked on the work platform for a short time.

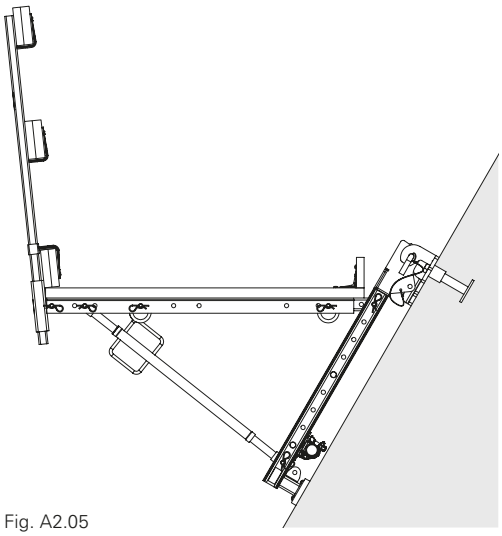

Fig. A2.05

Load case for working	
Live load on the platform	2.00 kN/m²
Max. working wind speed	0.20 kN/m² (V_w = 64 km/h)

Tab. A2.06

Storm (non-operational)
During longer work breaks or storm warnings with wind speeds > 64 km/h.

- All given loads are characteristic loads.
- Safeguarding measures, see Section "A7 Storm protection" on page 44.
- Remove loose materials and equipment.
- Do not access console brackets in storm conditions.
- For storm warnings with wind speeds > 111 km/h, inform an authorised person and implement separate safety measures.

Load case: Storm	
Live load on the platform	0.00 kN/m²
Peak velocity pressure $q_p(z)$*	≤0.60 kN/m² ($V_W \leq$ 111 km/h)

*Max. peak velocity pressure $q_p(z)$ including reduction for temporary construction.

Tab. A2.07

Use with full enclosure

- When installing with full enclosure, additional measures such as ballasting are required for securing. (Fig. A2.06)
- For the design of the ballasting and any additional measures required, refer to the VARIOKIT VGK design information.
- No ballasting is required when mounting with Bracing Shoe VGK (**68**). (Fig. A2.07)
- Affix Bracing Shoe VGK (**68**) with tie bolt Ø13/20x130 mm (**73**).
- The maximum height of the complete enclosure is to be taken from the VARIOKIT VGK design information. Higher complete enclosures must be verified on a project-specific basis.

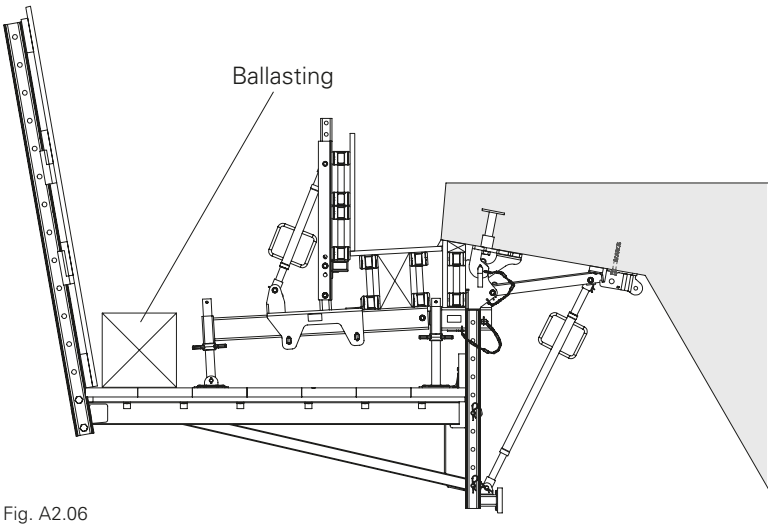

Fig. A2.06

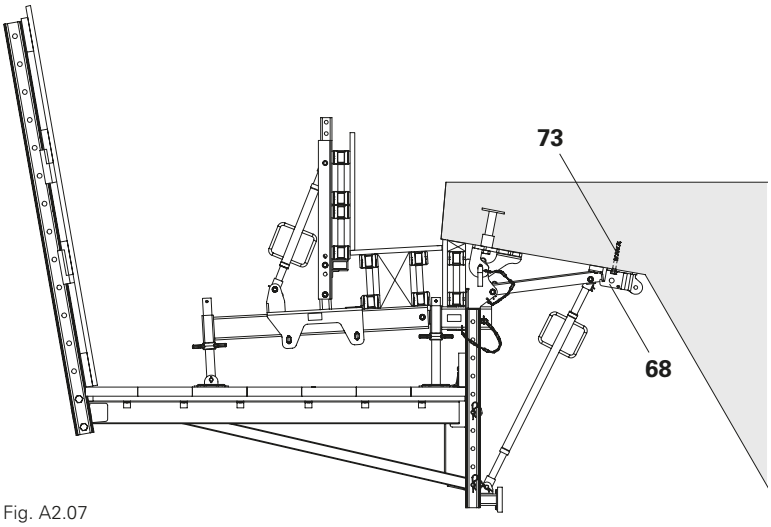

Fig. A2.07

Load case: passing train or trains passing each other	
Downwind on horizontal surfaces *)	0.50 kN/m²

*) See DIN EN 1991-2:2010-12 6.6.3

Tab. A2.08

- The distance from the upper edge of the parapet to the lower edge of the bridge cantilever is max. 55 cm in accordance with the type calculations for both assembly types. (Fig. A3.01)
- Greater heights must be verified separately.

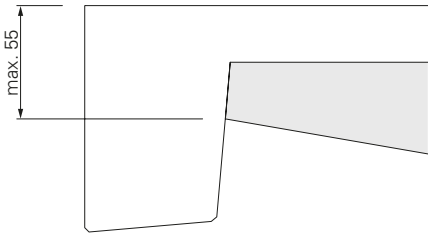

Fig. A3.01

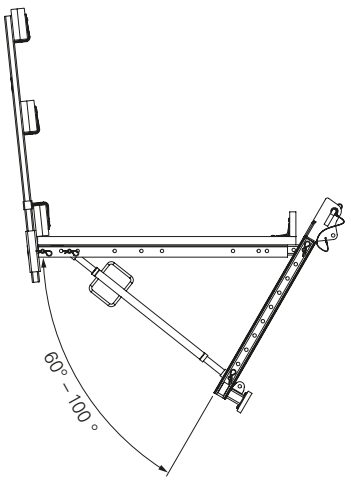

Fig. A3.10

- The different combinations can be configured according to the project-specific requirements using the dimensioning tool.
- A scaffolding tube bracing is not statically necessary, but facilitates assembly and application.

Cantilevered Parapet with Bracket Post VGK 70

Assembly with Bracket Post VGK 70 and Kicker Brace AV 82

- Kicker Brace AV 82 (**2a**) is always connected to the base of Bracket Post VGK 70 (**1a**) by means of bolts and cotter pins. (Fig. A4.01)
- Adapt Tie Rod DW15 (**56**) with squared timbers (**37**). (Fig. A4.01a)
- Mount Platform Cantil. Beam VGK 170 (**4**) in the top and bottom holes of Bracket Post VGK 70 (**1a**). (Fig. A4.01)

- Never attach Kicker Brace AV 82 (**2a**) between the fixing points of Platfor m Cantil. Beam VGK 170 (**4**). (Fig. A4.01b)
- Before demolition work begins or in the case of strong vibrations, secure Kicker Brace AV against unintentional turning, seesee Section "A10 Horizontal bracing for demolition work and strong vibrations" on page 49.

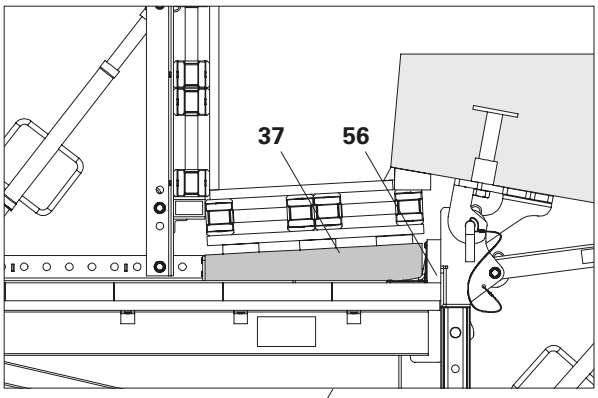

Fig. A4.01a

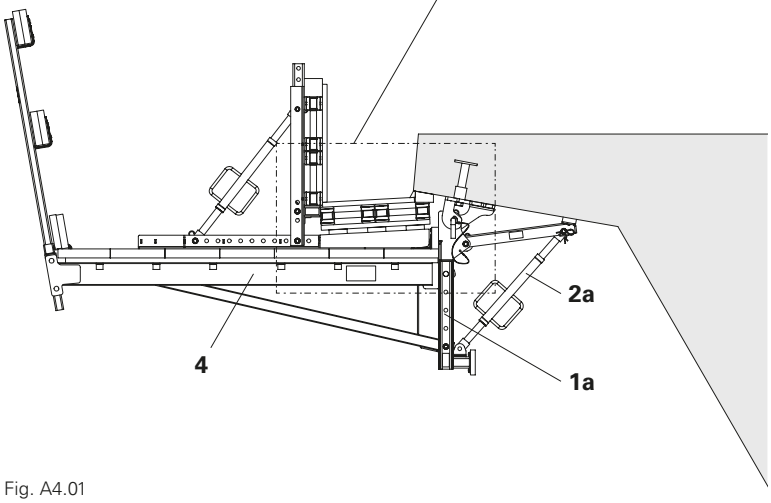

Fig. A4.01

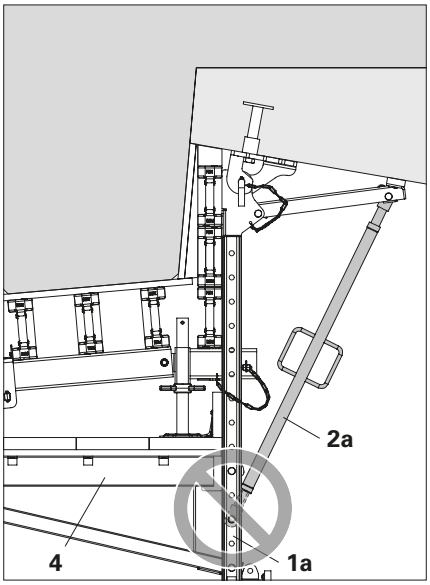

Fig. A4.01b

Cantilevered Parapet with Bracket Post VGK 110

Assembly with Bracket Post VGK 110 and Kicker Brace AV 111

- The Kicker Brace AV 111 (**2b**) is always fixed below the Platform Cantil. Beam VGK 170 (**4**) in the highest possible hole of the Bracket Post VGK 110 (**1b**) with bolts and cotter pins.
- Platform Cantil. Beam VGK 170 (**4**) is connected to the holes on Bracket Post VGK 110 (**1b**) according to the dimensions of the cantilevered parapet.

(Fig. A4.02)

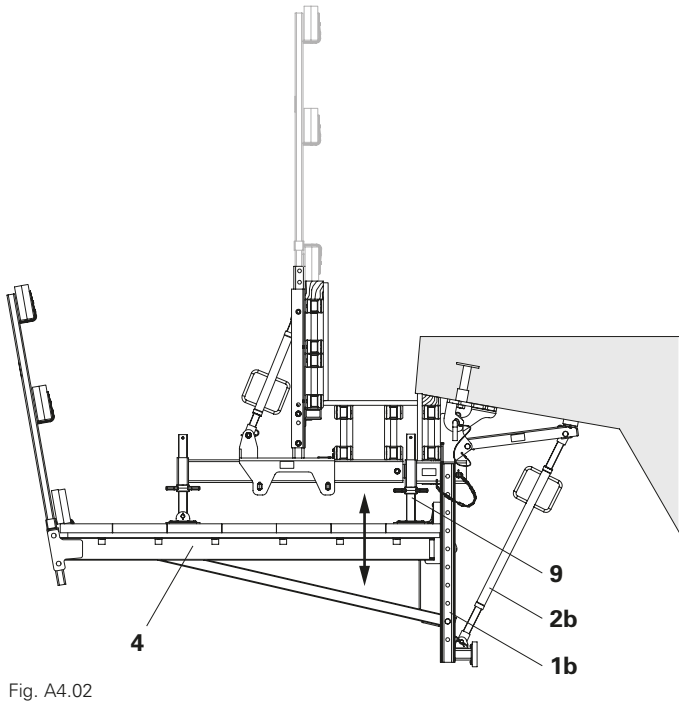

Fig. A4.02

- Never attach Kicker Brace AV 111 (**2b**) between the fixing points of Platform Cantil. Beam VGK 170 (**4**). (Fig. A4.02a)
- Before demolition work begins or in the case of strong vibrations, secure Kicker Brace AV against unintentional turning, seesee Section "A10 Horizontal bracing for demolition work and strong vibrations" on page 49.

Keep the extension of the Adj. Base Plate UJB 38 mm-80/55 (**9**) as small as possible, allow spindle travel for deshuttering.

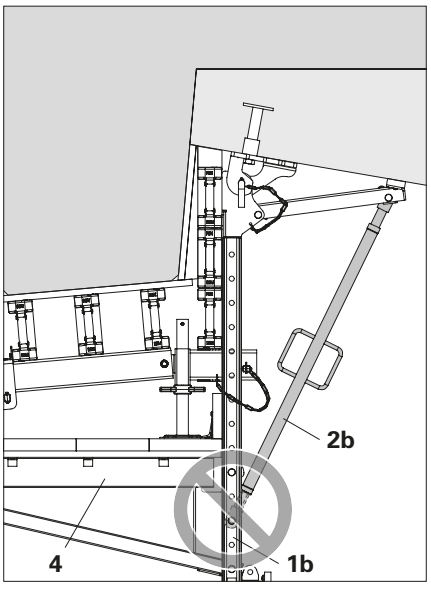

Fig. A4.02a

Cantilevered Parapet with Bracket Post VGK 139

Assembly with Bracket Post VGK 139 and Kicker Brace AV 140

- The Kicker Brace AV 140 (**2c**) is always fixed below the Platform Cantil. Beam VGK 170 (**4**) in the highest possible hole of the Bracket Post VGK 139 (**1c**) with bolts and cotter pins.
- Platform Cantil. Beam VGK 170 (**4**) is connected to the holes on Bracket Post VGK 139 (**1c**) according to the dimensions of the cantilevered parapet.

(Fig. A4.03)

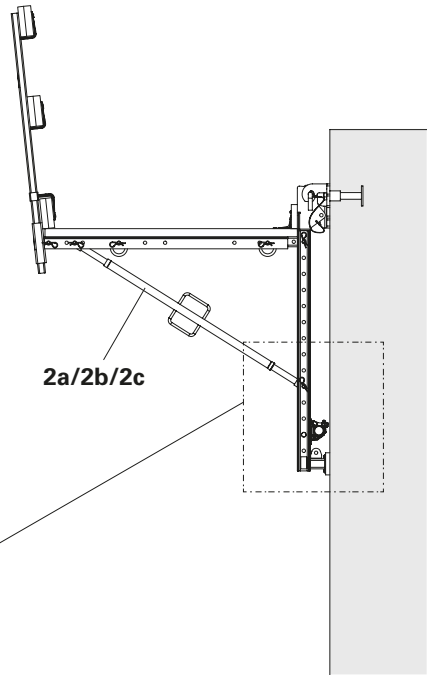

Fig. A4.08

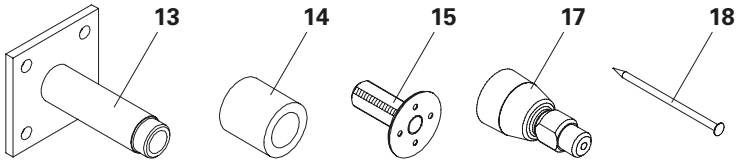
On the cantilever (new structures)

Anchor Sleeve M24
Anchor Sleeve M24 is also embedded when concreting the cantilevered parapet.

Required components per tie point:

13 Anchor Sleeve M24	1x
14 Cone FRC 32/52 mm C=40 mm	1x
15 Anchor Position. M24x65 mm	1x
41 Wire nail 3x80 mm	4x
Alternatively:	
17 Threaded Cone M24 40 mm	1x
18 Wire nail 4.6x130 mm	1x



- Constructional requirements for use of Anchor Sleeve M24 with cantilevered parapet systems, see design information for the VARIOKIT VGK.
- Permissible widths of influence on cantilevers: see design information for the VARIOKIT VGK.
- Keep thread of Anchor Sleeve M24 free of rust and dirt.

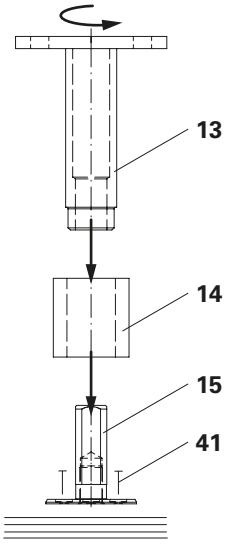


Fig. A5.01

Installation with anchor positioning stud

1. Fix Anchor Position. M24x65 mm ga (**15**) to the formwork panel by means of four wire nails 3x80 mm (**41**). Take into consideration edge spacing "a". (Fig. A5.01 + Fig. A5.01a)
2. Push Cone FRC 32/52 mm C=40 mm (**14**) over the thread of Anchor Position. M24x65 mm (**15**).
3. Screw Anchor Sleeve M24 (**13**) onto the Anchor Position. M24x65 mm (**15**) as far as it will go. (Fig. A5.01)
4. Secure Anchor Sleeve M24 (**13**) in the reinforcement using tie wire.

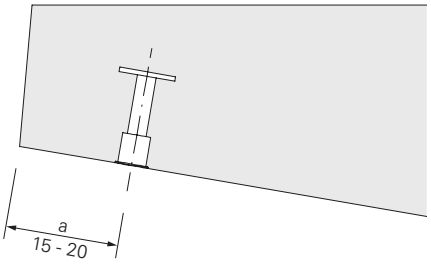

Fig. A5.01a

Installation with threaded cone

1. Check anchor installation components for signs of damage and replace if necessary.
2. Insert the wire nail 4.6x130 mm (**18**) into the Threaded Cone M24/40 mm (**17**).
3. Position Threaded Cone M24 40 mm (**17**) on the formlining and hammer in wire pin 4.6x130 mm all the way (**18**). (Fig. A5.02)
4. Screw in Anchor Sleeve M24 (**13**) as far as possible, at 90° to the formwork panel. (Fig. A5.03)
5. Secure Anchor Sleeve M24 (**13**) in the reinforcement with tie wire to ensure that it does not change its position during concreting.

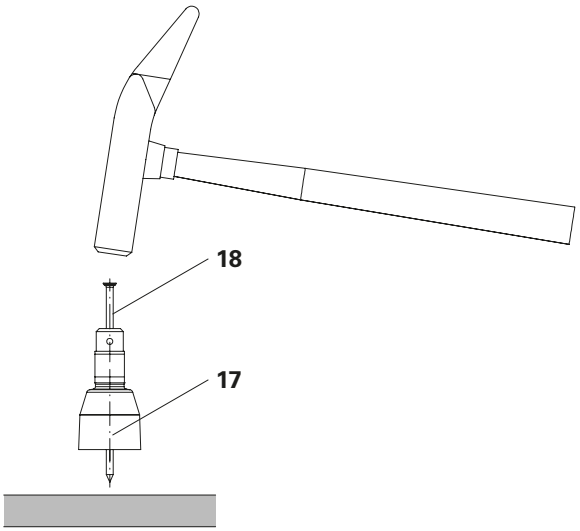

Fig. A5.02

Check installation

- Edge distance
- Distance to each other
- Ensure the anchor sleeve is completely screwed in
- Planned position

Tie and reinforcement checks can be done at the same time.

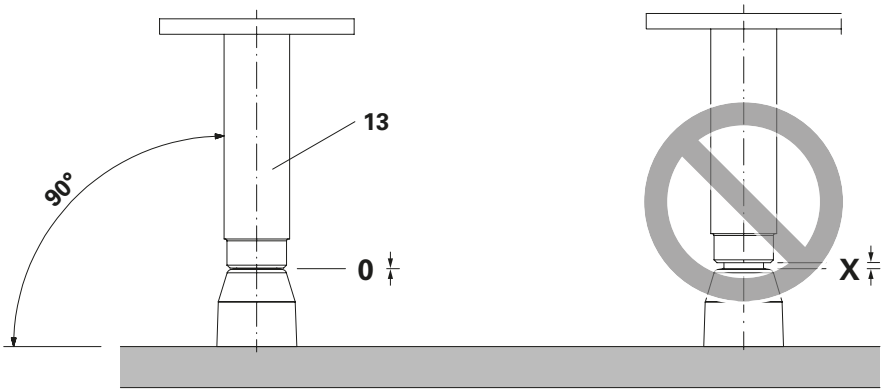

Fig. A5.03

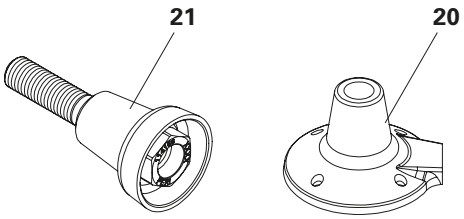
Carefully grease the surfaces of the cones that come into contact with concrete and the thread with a suitable grease.
This simplifies the process of removing the recoverable cones.

On abutment or wall



Screw-On Cone-2 M24/DW20
The screw-on cone is also embedded when concreting the abutment.

Anchor Sleeve M24
The anchor sleeve is also embedded when concreting the abutment.

Required components per tie point

20	Threaded Anchor Plate DW20	1x
21	Screw-On Cone-2 M24/DW20	1x
or		
13	Anchor Sleeve M24	1x
14	Cone FRC 32/52 mm C=40 mm	1x
or		
13	Anchor Sleeve M24	1x
74	Cone PP Ø31/26 mm C=25 mm	1x

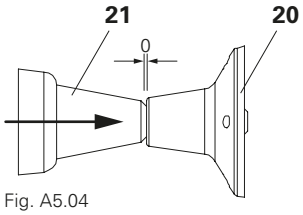


Fig. A5.04

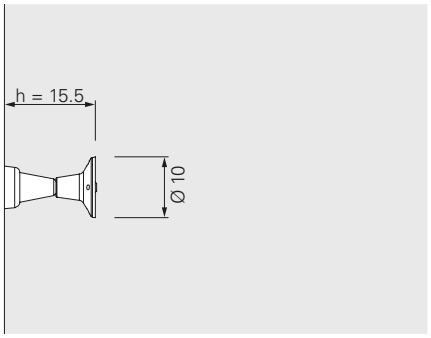

Fig. A5.04a

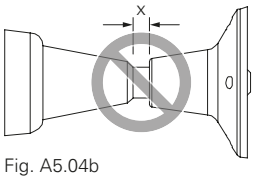

Fig. A5.04b

- Design requirements, see design information for VARIOKIT VGK.
- Permissible widths of influence on abutment, design information for VARIOKIT VGK.

Screw-on cone assembly

1. Fully insert Screw-On Cone-2 M24/DW20 (**21**) into Threaded Anchor Plate DW20 (**20**). (Fig. A5.04a) Anchoring depth h = 15.5 cm. (Fig. A5.04a)

Check installation

- Distance to each other
- Anchor sleeve fully screwed in (Fig. A5.04 + Fig. A5.04b)
- Planned position

Tie and reinforcement checks can be done at the same time.

Carefully grease the surfaces of the cones that come into contact with concrete and the thread with a suitable grease.
This simplifies the process of removing the recoverable cones.

Fixing with
Anchor Posit. Stud M24 ga

Assembly

1. Fix Anchor Posit. Stud M24 (**22**) to the marked position with four wire nails 3x80 mm (**41**). Take into consideration the minimum distance to the edge. (Fig. A5.05)
2. Tightly screw pre-assembled ties (**20 + 21**) onto Anchor Posit. Stud M24 (**22**) and tighten. (Fig. A5.06)
3. Firmly connect Threaded Anchor Plate DW20 (**20**) to the reinforcement to ensure a secure position.

or

2. Fit Cone FRC 32/52 mm C=40 mm (**14**) onto Anchor Position. M24x65 mm (**15**).
3. Screw Anchor Sleeve M24 onto Anchor Position. M24x65 mm (**15**) and tie it to the reinforcement to secure the position. (Fig. A5.07)

or

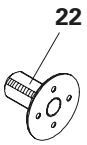
2. In the case of low concrete cover, fit Cone PP Ø31/26 mm C=25 mm (**74**) onto Anchor Position. M24x65 mm (**15**).
3. Screw Anchor Sleeve M24 onto Anchor Position. M24x65 mm (**15**) and tie it to the reinforcement to secure the position. (Fig. A5.08)

Checking assembly

- Height
- Distance to each other
- Anchoring depth h
- Alignment according to specifications

Tie and reinforcement checks can be done at the same time.

- A more stable fixing is achieved through installation of the tie positioning plate, see A5 "Assembly of Advancing Screw M24 ga".
- In this case, the distances from the holes to be drilled to the steel struts or beams of the formwork must be large enough.



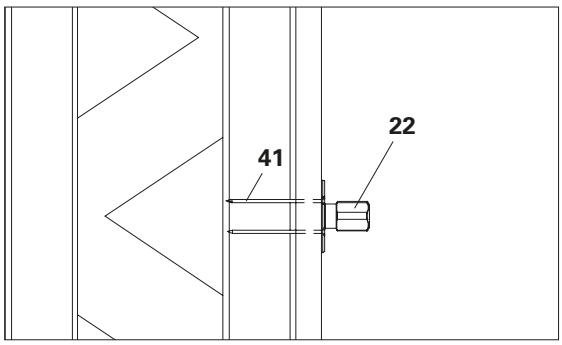


Fig. A5.05

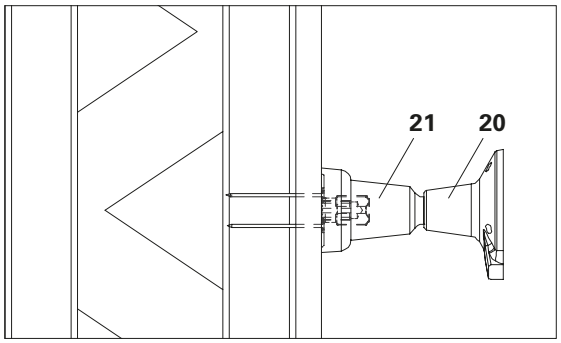

Fig. A5.06

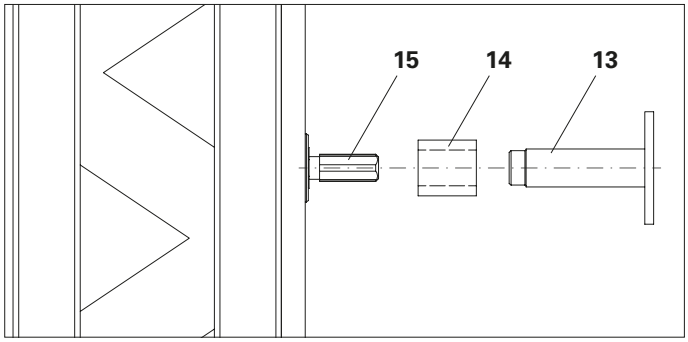

Fig. A5.07

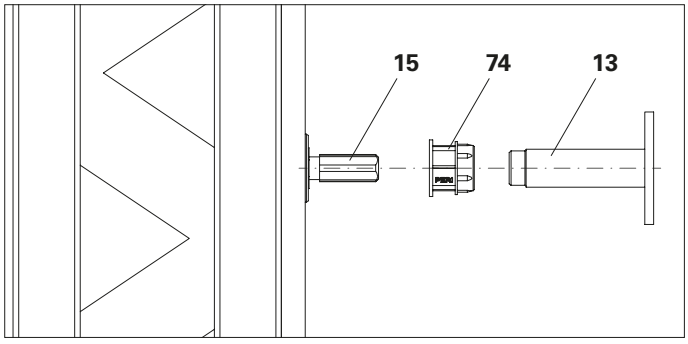

Fig. A5.08

Fixing with Advancing Screw M24 ga

Preparation

1. Check the required space for the Anchor Posit. Plate M24 ga (**45**). Lateral spacings of 3 cm or 4 cm are required.
2. Measure and drill a hole Ø 25 mm from the front of the formwork. (Fig. A5.09)
3. Attach Anchor Posit. Plate M24 ga (**45**) to the formlining with 4x Hex-Wood-Screw 6x20 DIN571-ga (**47**). (Fig. A5.10)

Assembly

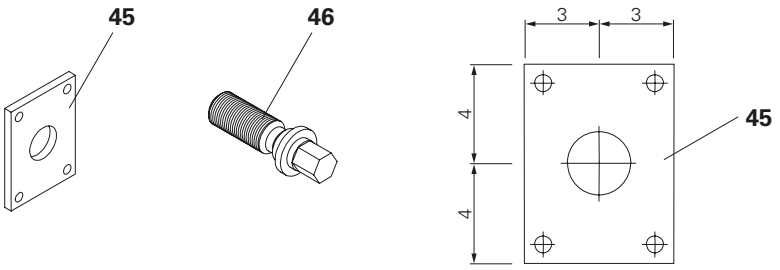
1. Insert Advancing Screw M24 (**46**) from the rear side of the formlining through the hole.
2. From the front side of the formlining, tightly screw on the tie (**20 + 21**). (Fig. A5.11)
3. Firmly connect Threaded Anchor Plate DW20 (**20**) to the reinforcement to ensure a secure position.

Checking assembly

- Height
- Distance to each other
- Anchoring depth h
- Alignment according to specifications

Tie and reinforcement checks can be done at the same time.

If there is a formwork girder positioned at the rear of the tie point, "Assembly with Anchor Posit. Stud M24 ga" can be used.



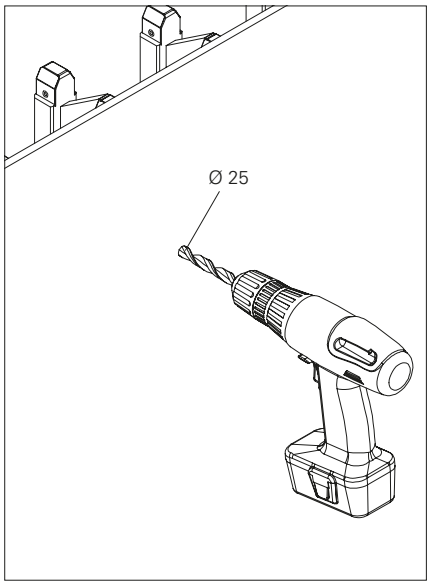


Fig. A5.09

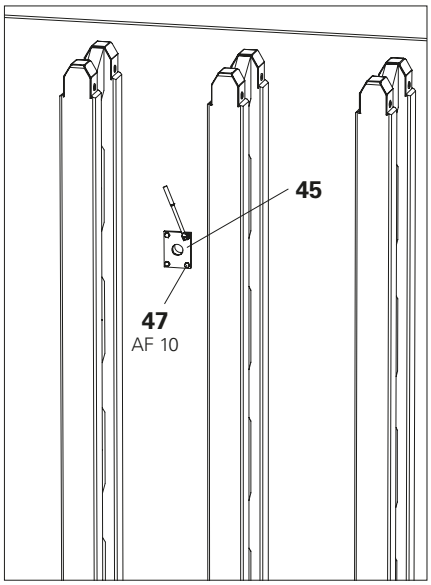

Fig. A5.10

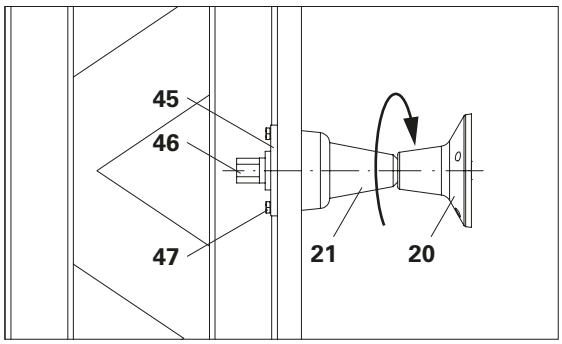

Fig. A5.11

Alternative anchoring
For anchorage on alternative anchoring (according to General Building Inspectorate Approval no. Z-21.6-1764)

Required components per tie point:

12a	Suspension Head VGK Flex	1x
28	Anchor VGK B15	1x
Alternatively:		
12b	Suspension Head VGK	1x
27	Anchor Lock VGK B15	1x
28	Anchor VGK B15	1x

Assembly of Suspension Head Flex VGK
1. Insert Anchor VGK B15 (**28**) through Suspension Head VGK Flex on the slot side (**12a**), screw on but do not tighten. (Fig. A5.12b)
2. Push Suspension Head VGK Flex (**12a**) into position and tighten Anchor VGK B15 (**28**). (Fig. A5.12c)

(Fig. A5.12 + Fig. A5.12a)

Assembling Suspension Head VGK
1. Tighten Suspension Head VGK (**12**) with Anchor VGK B15 (**28**).
2. Secure Anchor VGK B15 (**28**) with Anchor Lock VGK B15 (**27**) to prevent rotation.

(Fig. A5.13 + Fig. A5.13a)

Checking assembly
- Alignment according to specifications

Tie and reinforcement checks can be done at the same time.

Close the hole after use using filler mortar.

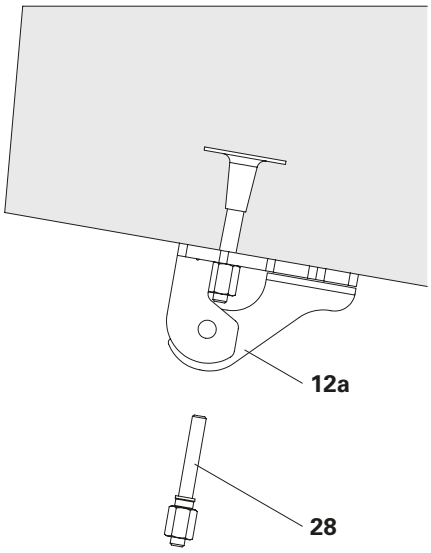

Fig. A5.12

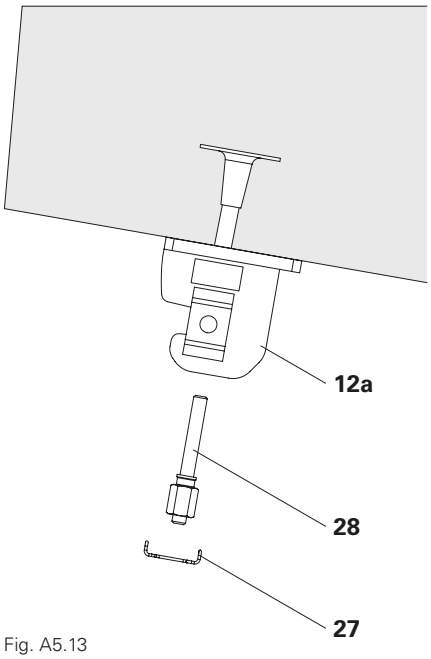

Fig. A5.13

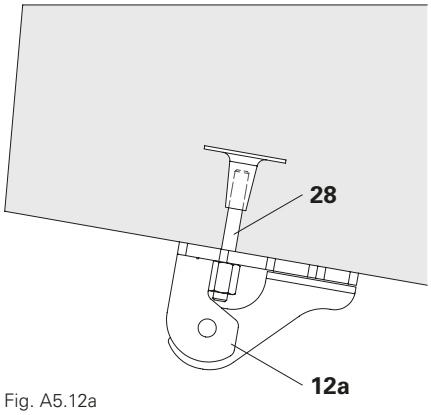

Fig. A5.12a

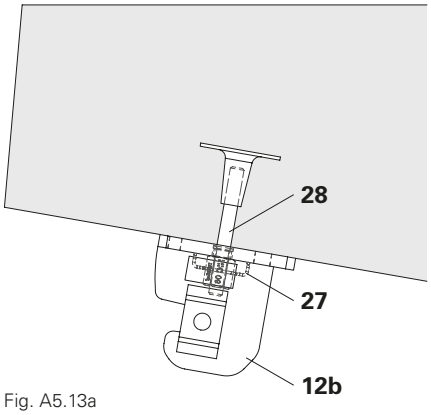

Fig. A5.13a

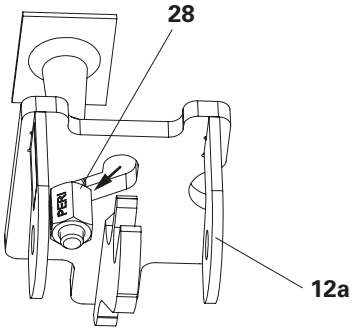

Fig. A5.12b

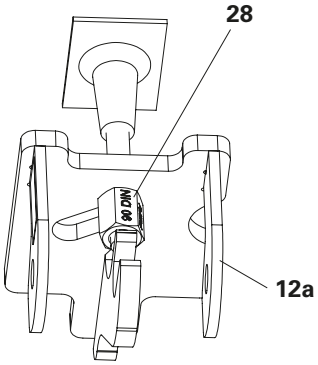

Fig. A5.12c

Removal and closure

19a – Ø 40 mm
19b – Ø 32 mm

Danger

Leading edges are present during assembly!
There is a risk of falling off the cantilevered parapet.

⇒ The removal and closure of the tie holes takes place from a safe and secure working area, e.g.:
- Telescopic work platform.
- Temporary working scaffold.
- Personal protective equipment to prevent falling from a height (PPE).

Dismantling on the cantilever

1. Loosen screw ISO 4014-M24x 100-8.8 (**16**) in Suspension Head VGK (**12**).
2. Remove Suspension Head VGK (**12**).

Closure

1. Clean tie hole.
2. Mix repoxal glue (**31**) according to the manufacturer information.
3. Dip the concrete plug Ø32 mm (**19b**) for the Anchor Posit. Stud M24 ga or Ø40 mm (**19a**) for the threaded cone M24 into the repoxal glue (**31**) on one side.
4. Tap the concrete plug (**19**) flush into the tie hole with a rubber mallet.
5. Remove adhesive residue with a spatula. (Fig. A5.14 + Fig. A5.14a)

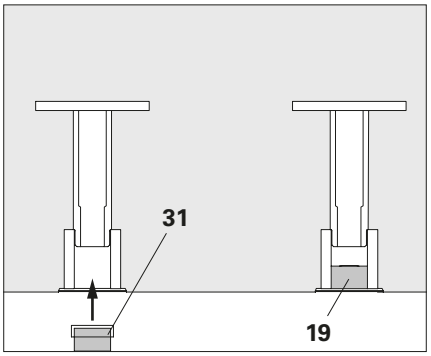

Fig. A5.14

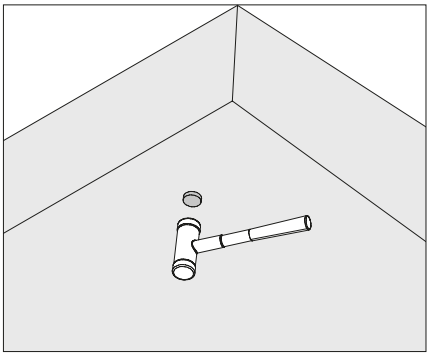

Fig. A5.14a

Dismantling on the abutment

1. Loosen screw ISO 4014-M24x 070-10.9 (**23**) in Suspension Head VGK (**12**).
2. Remove Suspension Head VGK (**12**).
3. Release Screw-On Cone-2 M24/ DW20 (**21**) using socket wrench AF 36.
4. Unscrew Screw-On Cone-2 M24/ DW20 (**21**) by hand. (Fig. A5.15 + Fig. A5.16)

Closure

1. Clean tie hole.
2. Close the tie hole with a suitable cone, e.g. PERI Concrete Cones. (Fig. A5.17)

Observe user information for concrete cones with Sealing Compound-3.

For architectural concrete, the tie holes can be closed with PERI Sealing Cones KK.

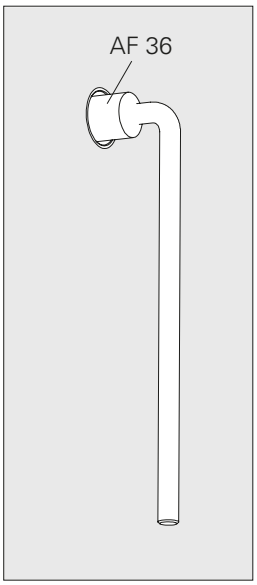

Fig. A5.15

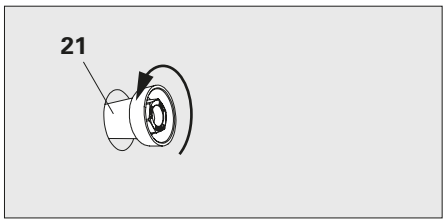

Fig. A5.16

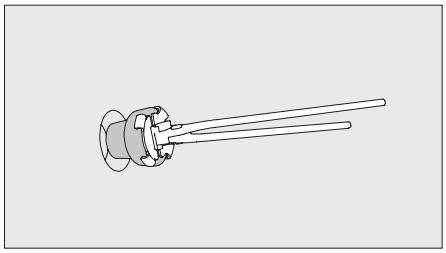

Fig. A5.17

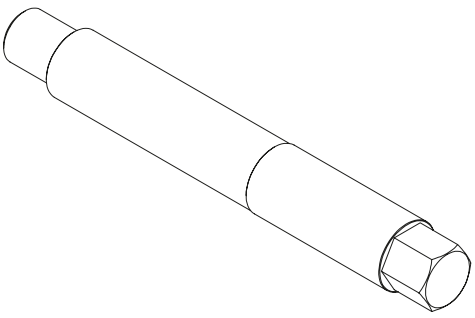
Refurbishment on the cantilever

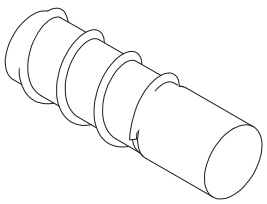
Danger

The full load-bearing capacity is reached after the composite mortar has hardened!
The cantilevered parapet bracket can fall.

⇒ Access the cantilevered parapet bracket only after the concrete has hardened.

Observe safety data sheet.





Preparing drilled hole

1. Ensure that the drilled hole is at right angles to the concrete surface. Drill hole depth 160 mm, Ø 22 mm.
2. Check the depth of the drilled hole.
3. Blow out the drilled hole with the blow-out pump (**48**) from below.
4. Brush out the drilled hole with Cleaning Brush D24 (**49**) at least 4 times.
5. Blow out the drilled hole with the blow-out pump (**48**) from below.

Mounting refurbishment anchor

1. Inject Composite Mortar CF-T 300 V (**50**).
2. Screw Connection Bolt M16/ M24x50 (**51**) and ITH-Sleeve TSM BC 22x75 mm IM16 (**52**) together tightly.
3. Screw the unit into the drilled hole with an impact wrench (nominal torque 600 Nm). (Fig. A5.18)
   → After reaching the designated screw-in depth, the composite mortar must appear on the concrete surface.
   → The embedment mark is the start of the thread on the M24.
   → VGK assembly loads can be immediately accommodated.
7. Fit Suspension Head VGK with Hex-Nut ISO 7040-M24-8-ga (**24**).

Disassembly

1. Unscrew Connection Bolt M16/ M24x50 (**51**) after use. (Fig. A5.19)
2. Close the drilled hole.

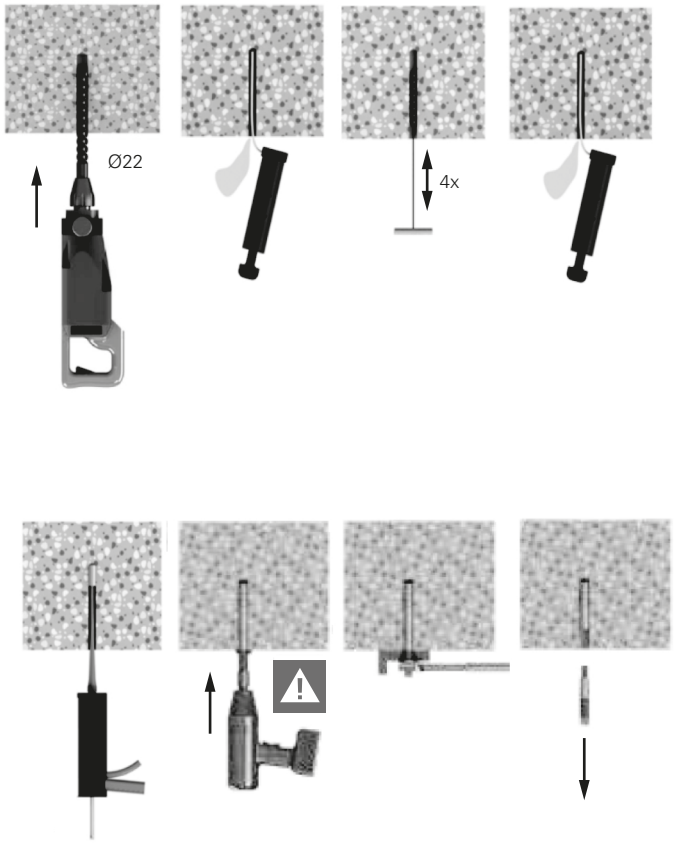


Fig. A5.18

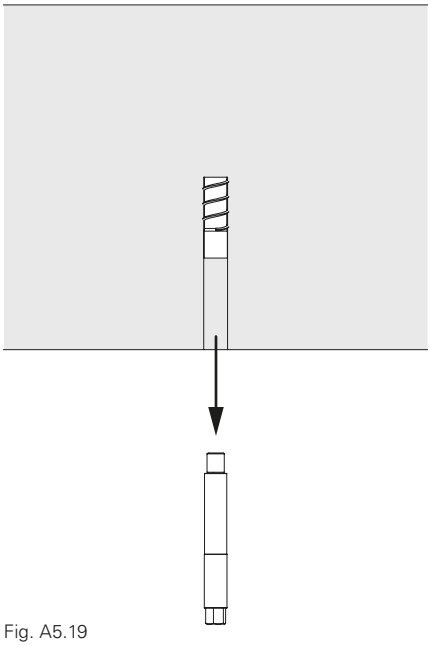

Fig. A5.19

Take into consideration country–specific standards and regulations.

Platform decking

Planking according to EN 12811 and DIN 4420-1 respectively.

- Planking (**35**) spans a minimum of two bays, with offset joints.
- Fit planking onto each platform beam with Wood-Screws 6x80 SK-TX30 HPI (**39**). (Fig. A6.01 + Fig. A6.02)
- When mounting the platform on the floor, only a multi-layer plywood sheet can be used as deck (cantilever = c/2, max. 75 cm). (Fig. A6.03)
- Multi-layer wood sheet thickness of at least 39 mm.
- Secure cantilevered planking against lifting.
- With installation according to DIN 4420-1 Table 3, planking can be used as a cover which is suitable to catch falling objects. Ensure tightness.

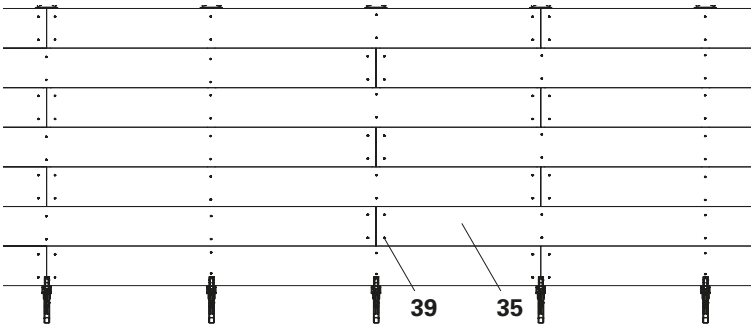

Fig. A6.01

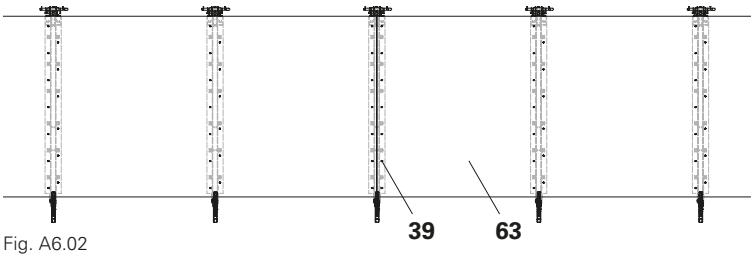

Fig. A6.02

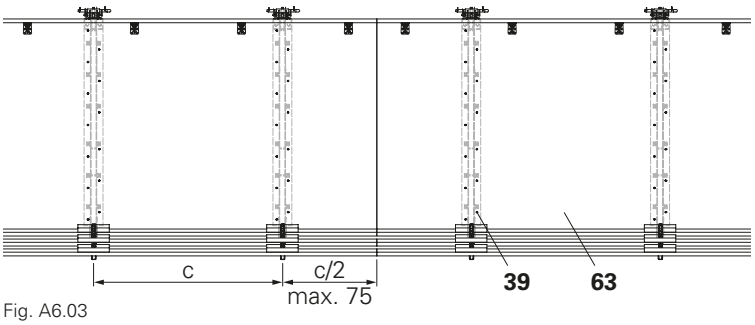

Fig. A6.03

Safety scaffold

In the absence of safety measures against falling and fall heights h > 1.00 m at the edge of the bridge, the planking is to be installed as safety decking according to DIN 4420-1.

- Installation of planking depending on the fall height h and span in accordance with DIN 4420-1, Table 2. (Fig. A6.04)
- Depending on the span, it may be necessary to double the thickness.

For planking widths >24 cm and fall heights h ≤1.50 m:

Planking thickness	max. span
4.0 cm	1.00 m
5.0 cm	1.30 m
Double thickness	
2 x 4.0 cm	1.60 m
2 x 5.0 cm	2.20 m

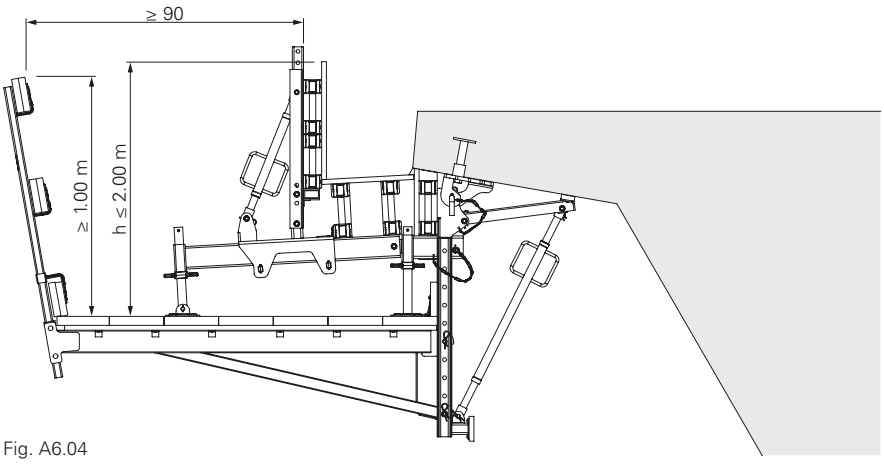

Fig. A6.04

Lateral protection

Guardrails are to be mounted on the working scaffold according to EN 12811.

- Fix guardrail boards (**33**) and toe boards (**34**) to Guardrail Posts-2 HSGP (**29**) with wire pins or wood screws (**36**). (Fig. A6.05)
- Alternatively, Guardrail Post SGP (**67**) can be fitted instead of Guardrail Post-2 HSGP (**29**).
- Alternatively, Lateral Protection Barriers PMB can be used instead of guardrails and toe boards. (Fig. A6.06)
- Lateral protection or full enclosure is only possible with the use of VGK Flex with Guardrail Post -2 HSGP (**29**).
- In case of partial or complete enclosure of the lateral protection or use with Guardrail Post SGP (**67**), the permissible influence width of the guardrail post may limit the bracket spacing.

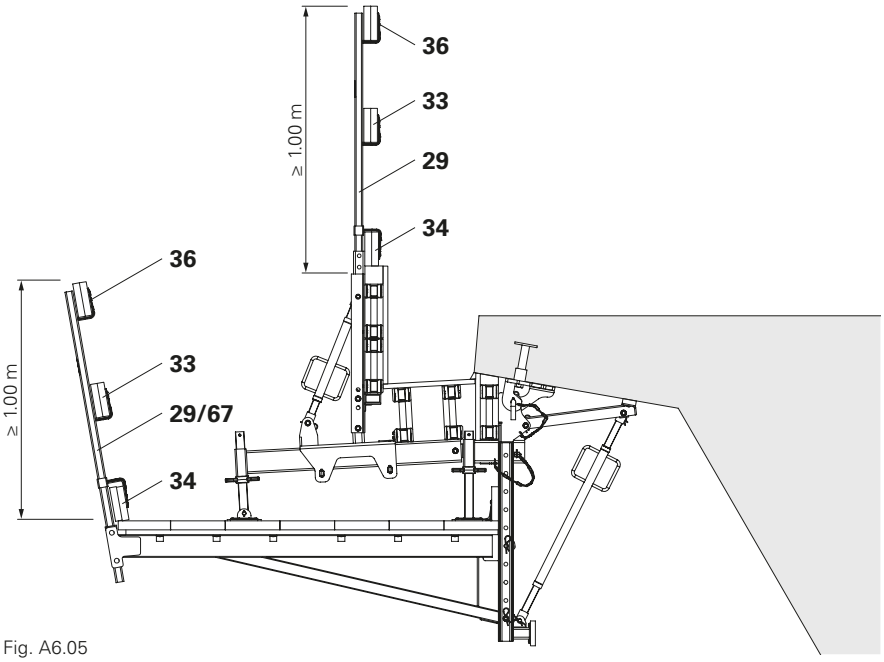

Fig. A6.05

Observe the design information.

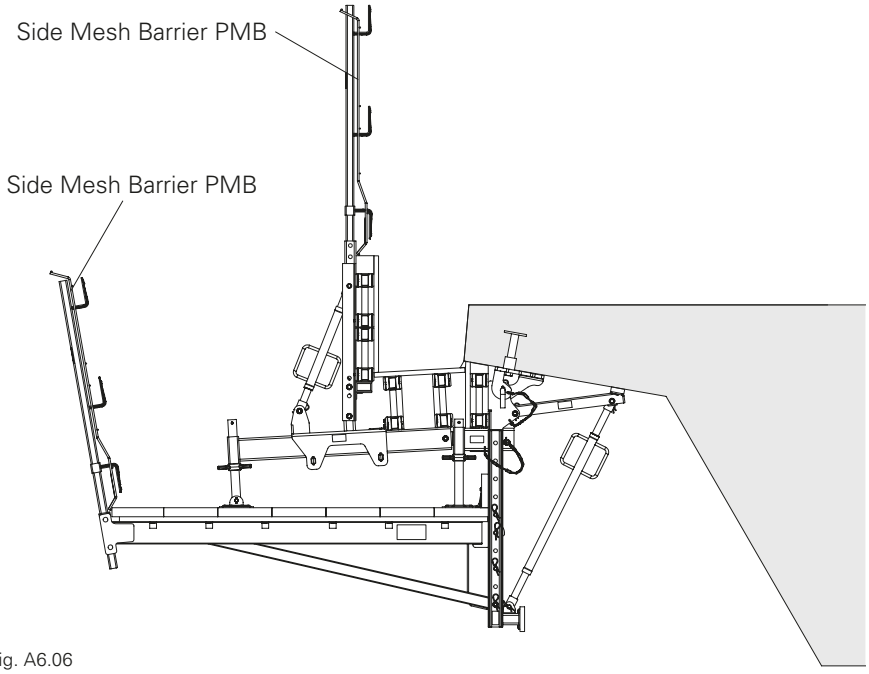

Fig. A6.06

A7 Storm protection

Use as formwork scaffolding

In case of a storm,
Console Bracket VGK must be free of materials and tools as well as be secured against tipping.
Example using squared timbers (**37**).

Refer to the relevant design information for storm protection measures for complete enclosures or alternative storm protection measures.

Cantilever
(Fig. A7.01)

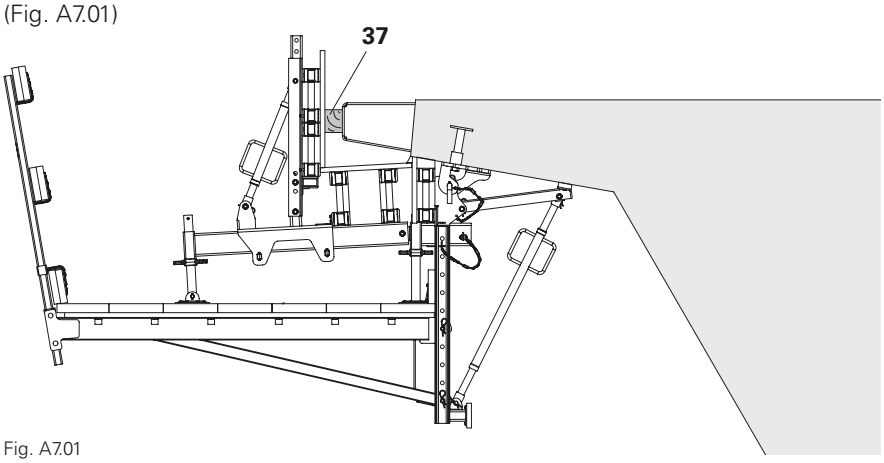

Fig. A7.01

Vertical application on abutments
(Fig. A7.02 + Fig. A7.03)

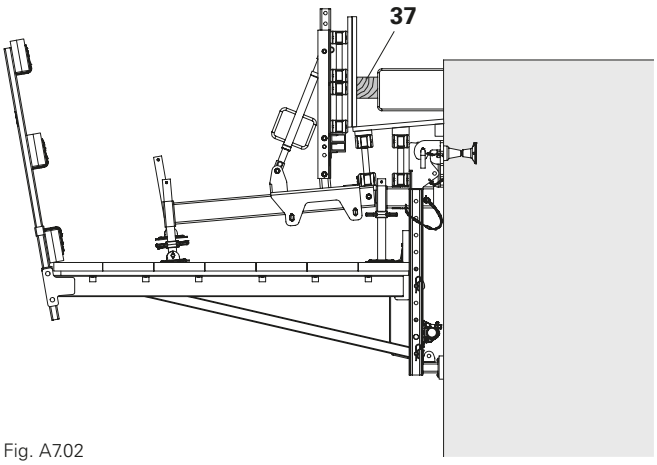

Fig. A7.02

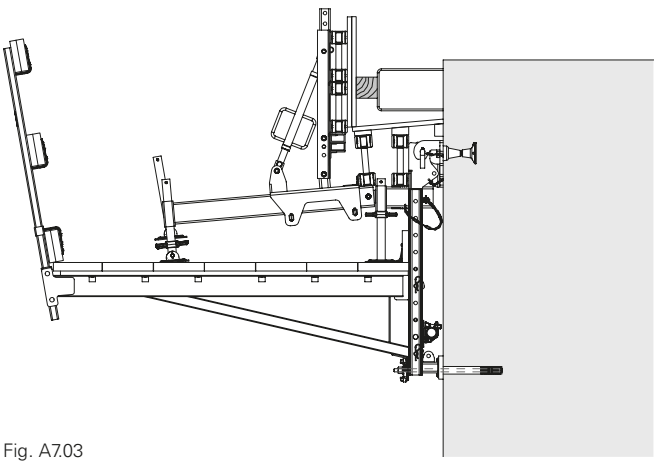

Fig. A7.03

Use as work platform

In case of a storm,
Console Bracket VGK must be free of materials and tools as well as be secured against tipping.
Example using squared timbers (**37**).

Refer to the relevant design information for storm protection measures for complete enclosures or alternative storm protection measures.

Cantilever

Vertical application on abutments
(Fig. A7.05 + Fig. A7.06)

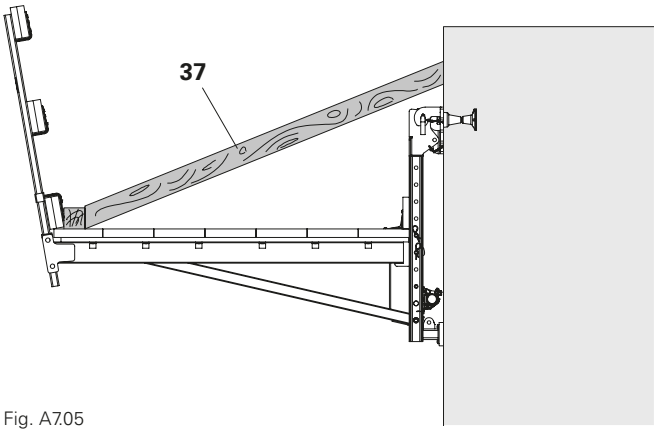

Fig. A7.05

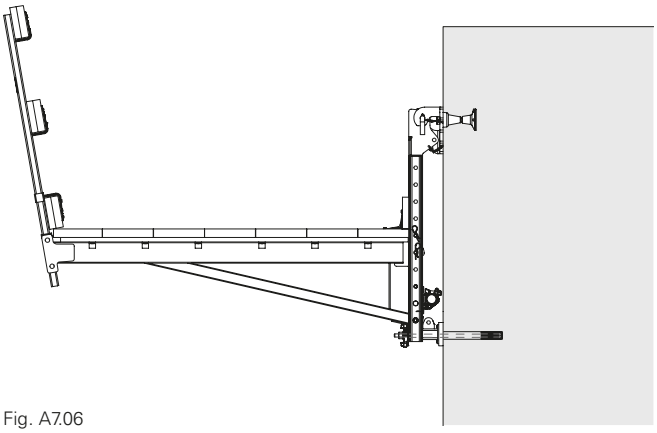

Fig. A7.06

A8 Horizontal bracing at 3 % < s ≤ 7 %

On the cantilever

- For horizontal bracing, the console brackets are always connected in pairs to the scaffolding tubes and diagonal planking.
- The diagonally-positioned plank (**38**) is force-locked against Bracket Post VGK in the direction of the longitudinal inclination s.
- Take into consideration the longitudinal inclination s.
- When using a multi-layer plywood sheet (**63**) as the deck, bracing is not necessary.

Diagonal planking

Required components:

38 Planking 20 x 4	1x
39 Wood screw 6x80 SK-TX30 HPI	8x
40 Height compensation	1x

Assembly

1. Prepare planking 20 x 4 (**38**) for a force-locked connection.
2. Place planking 20 x 4 (**38**) diagonally between two console brackets on the deck and fix in place with Wood-Screw 6x80 SK-TX30 HPI (**39**).
3. Mount the height compensation (**40**).
4. Fasten Formwork Fixing-2 VGK (**5**) and Formwork Girder VGK (**6**), see Section "B5 Formwork unit" on page 66.
5. Fix the base spindles in place with 2x Wood-Screws 6x80 SK-TX30 HPI in each case (**39**).

(Fig. A8.01 + Fig. A8.01a)

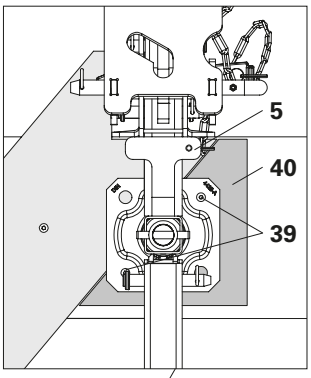

Fig. A8.01a

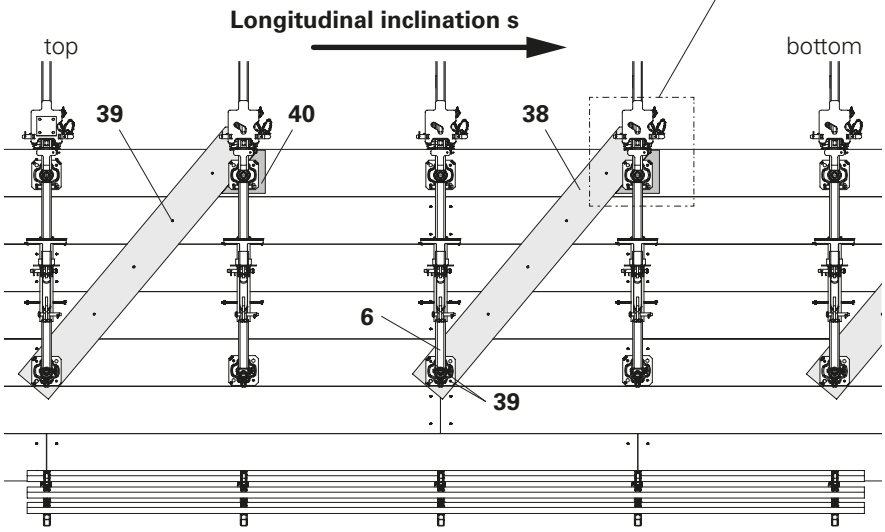

Fig. A8.01

A8 Horizontal bracing at 3 % < s ≤ 7 %

Scaffolding tube

Required components:

10	Bracing Connector VGK	2x
11	Cutting Costs Scaffold Tube Ø48.3x3.2 mm	1x

Assembly

1. Fit the Bracing Connector VGK (**10**) onto the Bracket Post VGK (**1a / 1b / 1c**) at the height of the deck with screw ISO 4014-M16x 080-8.8 (**10.1**) and Hex-Nut ISO 4032-M16-8 (**10.2**).
2. Mount the scaffolding tube (**11**) on two bracing connectors VGK (**10**).
3. Align console brackets and tighten Bracing Connectors VGK (**10**), AF 19.

(Fig. A8.02 + Fig. A8.02a)

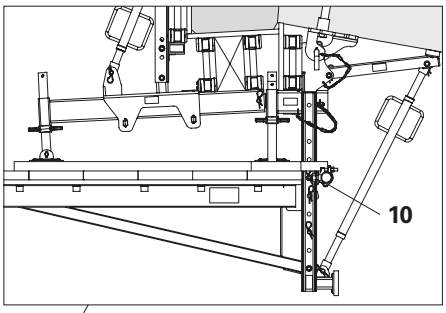

Fig. A8.02a

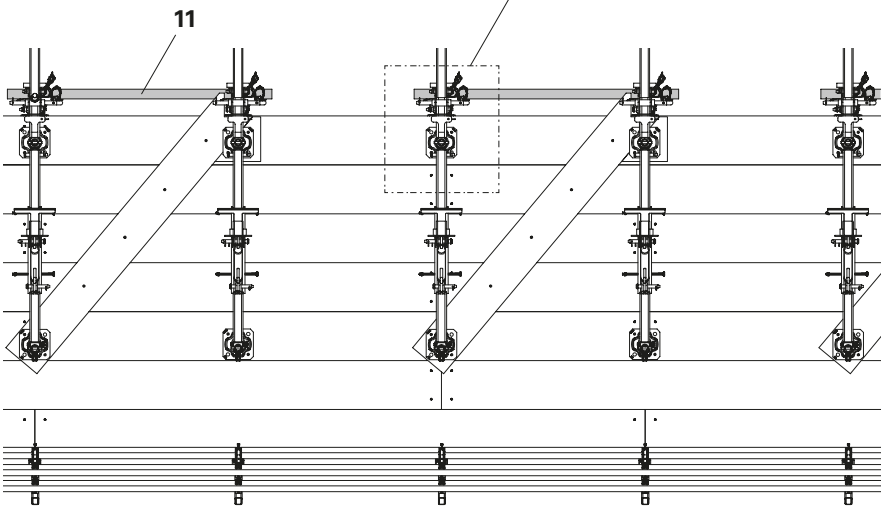

Fig. A8.02

On the abutment

- For longitudinal inclination 0 % < s ≤ 3 %, diagonal bracing and horizontal bracing must be installed.

(Fig. A8.03)

- For platform units in longitudinal inclination s >3 % at the abutment, the bracing with scaffolding tubes must be verified specifically for each project.

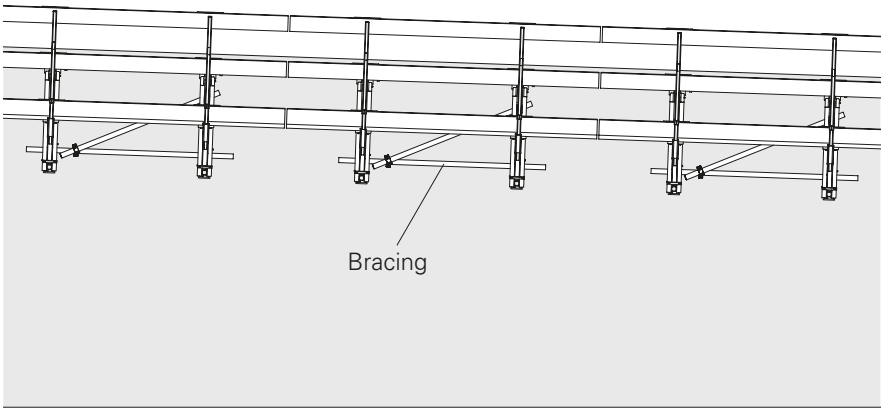

Fig. A8.03

A9 Horizontal bracing for crane misalignment

- The horizontal bracing applies to VGK Concreting Platform, VGK 160 and VGK Flex.
- In general, at least one horizontal Cutting Costs Scaffold Tube Ø48.3x3.2 mm (**11**) must be mounted for crane offsets.
- The mounting position for the standard platforms is on the wall side. It is possible to mount Work Platform VGK Flex on both sides.
- For longitudinal slopes or planned horizontal loads, a diagonal must also be installedsee Section "On the abutment" on page 47

Components

10 Bracing Connector VGK
11 Cutting Costs Scaffold Tube Ø48.3x3.2 mm
65 Swivel Coupler SW Ø48/48 mm ga

Assembly

1. Fit the Bracing Connector VGK (**10**) onto the Bracket Post VGK (**1a / 1b / 1c**) at the indicated positions with screw ISO 4014-M16x080-8.8 (**10.1**) and Hex-Nut ISO 4032-M16-8 (**10.2**).
2. Attach scaffolding tube Ø48.3x3.2 mm (**11**) and tighten the bracing connectors.

For diagonals:

3. Fit the Swivel Coupler SW48/48 mm ga (**65**) onto the Cutting Costs Scaffold Tube Ø48.3x3.2 mm (**11**).
4. Attach Cutting Costs Scaffold Tube Ø48.3x3.2 mm (**11**) to Swivel Coupler SW Ø48/48 mm ga (**65**) and Bracing Connector VGK (**10**) and tighten.

(Fig. A9.01 – Fig. A9.01b)

When using the VGK 160 in conjunction with Bracket Post VGK 70, a horizontal scaffolding tube is not needed.

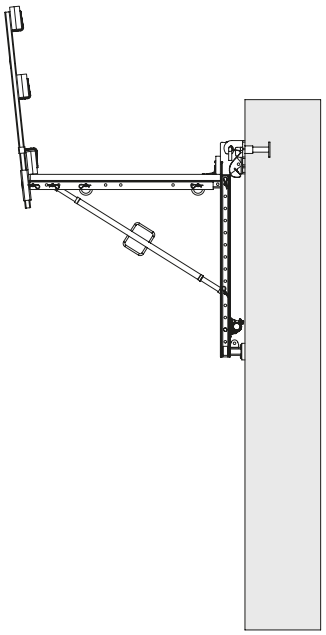

Fig. A9.01a

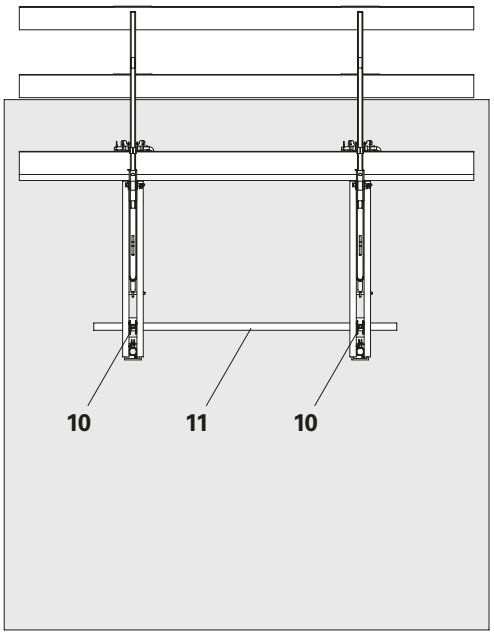

Fig. A9.01b

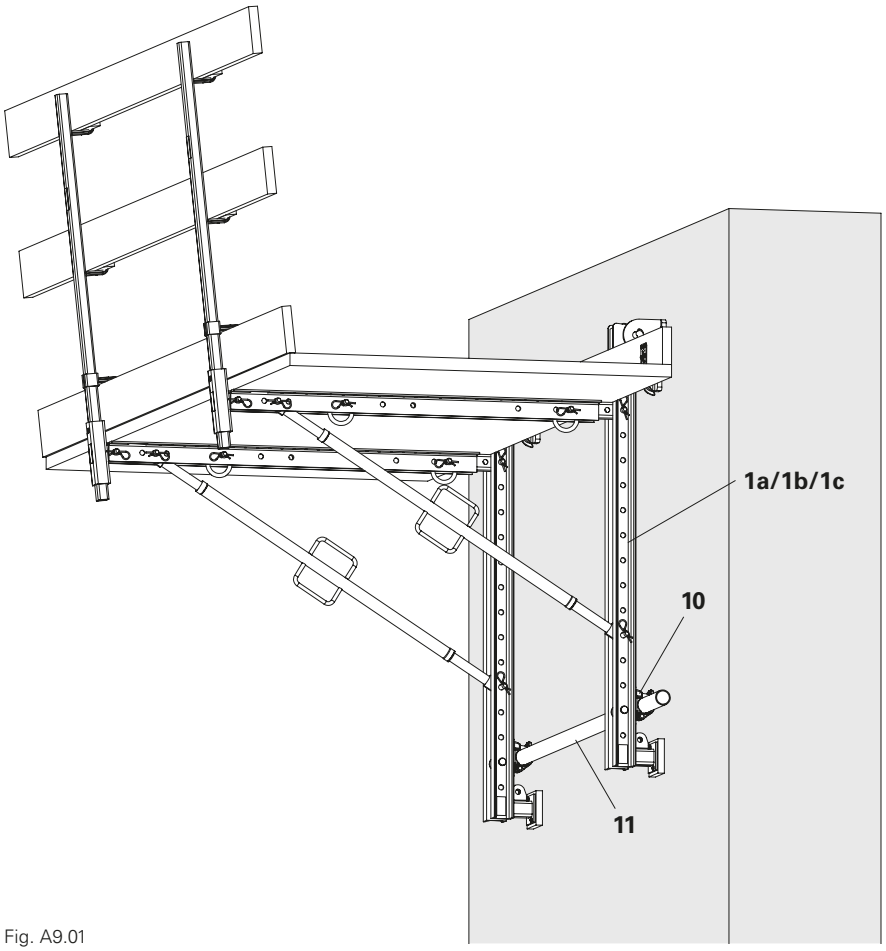

Fig. A9.01

A10 Horizontal bracing for demolition work and strong vibrations

- If the cantilevered parapet bracket is used during demolition work or is subjected to strong vibrations, the Kicker Brace AV must also be secured against twisting at the pressure point.
- Do not use the light platform version for demolition work.

Assembly

1. Fit a Swivel Coupling EN74 38/48 mm (**32**) to the spindle sleeve on each Kicker Brace AV (**2**).
2. In each case, connect two console brackets to a Cutting Costs Scaffold Tube Ø48.3x3.2 mm (**11**).

(Fig. A10.01)

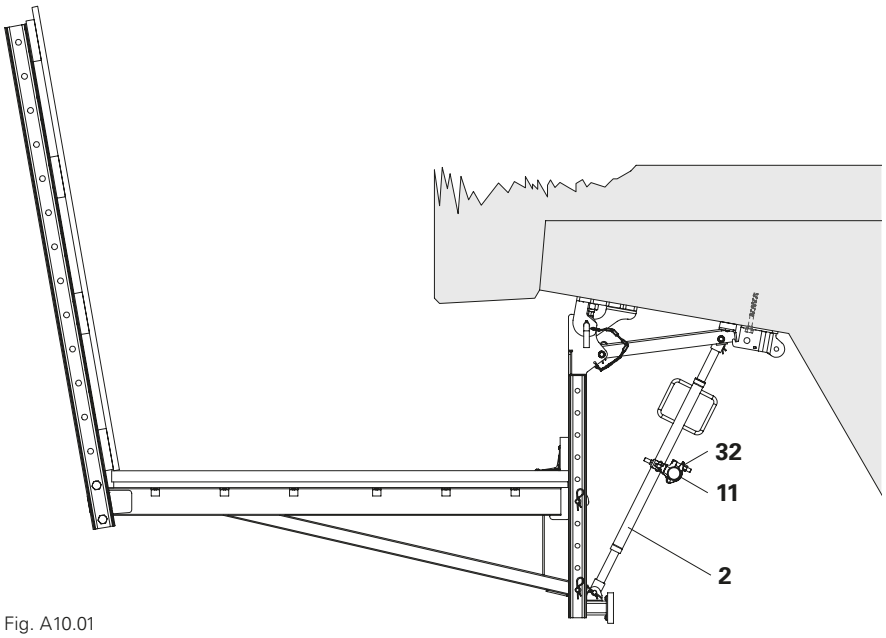

Fig. A10.01

A11 Inspecting the Bracket Cantilever VGK 50

The sliding capacity of the compression bearing on Bracket Cantilever VGK 50 (**3**) must be checked before each use.

Bracket cantilevers are not to be used if the grouting is damaged.

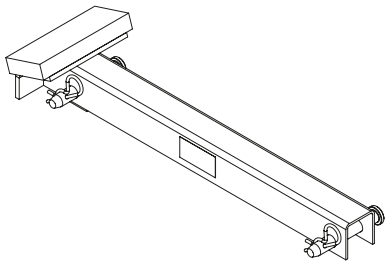
The inspection includes a visual and functionality check

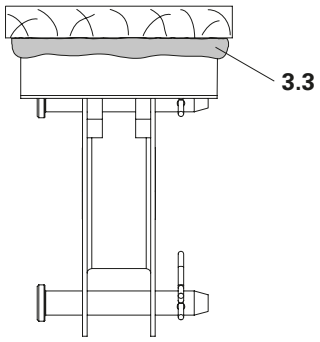
Purpose
Operational and functional reliability can be guaranteed due to the inspection carried out before the initial commissioning, as well as regularly occurring inspections.

Visual inspection
- Wear and tear
- Cracks, grooves or similar in the grouting (**3.3**).

Functional inspection
- Formwork panel moveable – approx. 2 mm forwards, back and twistable. (Fig. A11.01 – Fig. A11.03)
- The formwork panel automatically goes back to the starting position.

Measures
If any defects are determined during the safety inspection, they must be eliminated according to the instructions provided by the qualified person. A new inspection must then be performed.





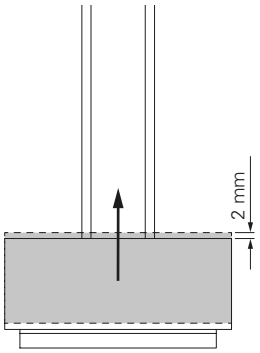


Fig. A11.01

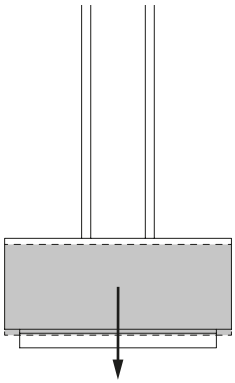

Fig. A11.02

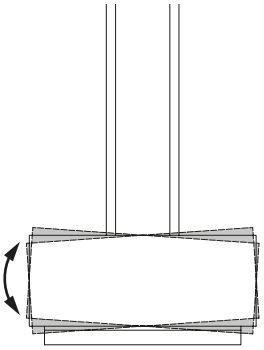

Fig. A11.03

Assembly on the cantilever

Danger

Leading edges are present during assembly!
There is a risk of falling off the cantilevered parapet.

⇒ Assemble platform unit and platform unit from a safe and secure working area, e.g.:
- Telescopic work platform.
- Temporary working scaffold.
- Personal protective equipment to prevent falling from a height (PPE).

The formwork unit is assembled and adjusted from the platform unit. Depending on the stage of construction, temporary safety measures to prevent falling may be required.

Removing the anchor positioning stud

1. Straighten wire nails.
2. Retract the formwork. Pull the wire nails through the formwork panel.
3. Unscrew Anchor Posit. Stud M24 ga (**22**) from the anchor sleeve by means of an Allen key AF 14.

(Fig. B1.01)

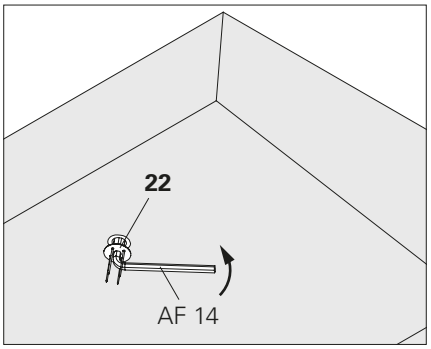

Fig. B1.01

Removing threaded cone

1. Retract the formwork.
2. Push back wire nail with a hammer.
3. Unscrew Threaded Cone M24/40 mm (**17**) from the anchor sleeve using a ratchet wrench and socket AF 22.

(Fig. B1.02)

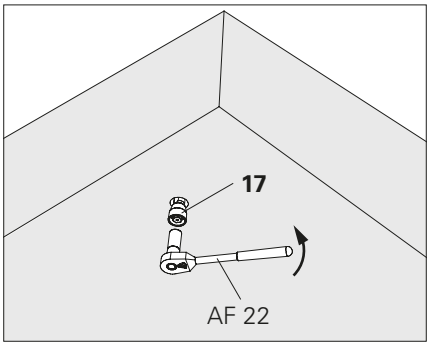

Fig. B1.02

Assembly

1. Insert Screw ISO 4014-M24x100-8.8-ga (**16**) through Suspension Head VGK Flex (**12a**) on the slot side, and screw it onto Anchor Sleeve M24 (**13**) but do not tighten. (Fig. B1.03a)
2. Push Suspension Head VGK Flex (**12a**) into position and tighten Screw ISO 4014-M24x100-8.8-ga (**16**). (Fig. B1.03b)

(Fig. B1.03)

3. Fix Bracket Cantilever VGK 50 (**3**) to Bracket Post VGK (**3.1**) using bolts and cotter pins (**1**). (Fig. B1.04)
4. Attach pre-adjusted Kicker Brace AV (**2**) to Bracket Cantilever VGK 50 (**3**) using bolts and cotter pins (**3.2**).
5. Attach pre-adjusted Kicker Brace AV (**2**) to the Bracket Post VGK (**1**) using bolts and cotter pins (**2.2**). (Fig. B1.05)
6. Attach Bracket Unit VGK (**1**) to Suspension Head VGK (**12**) and secure by means of locking pins Ø20x260 mm (**1.1**) and Cotter Pins 4/1 ga.
7. Vertically align Bracket Unit VGK (**1**) with Kicker Brace AV (**2**). (Fig. B1.06 + Fig. B1.07)

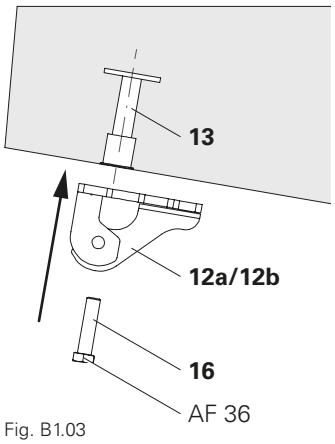

Fig. B1.03

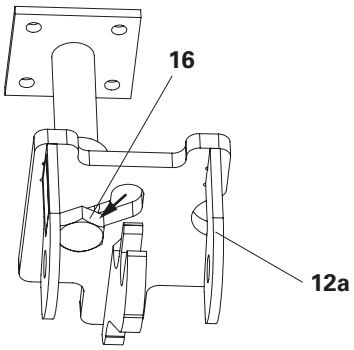

Fig. B1.03a

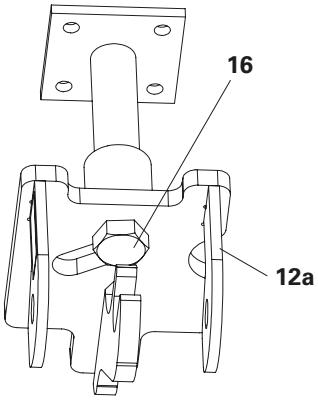

Fig. B1.03b

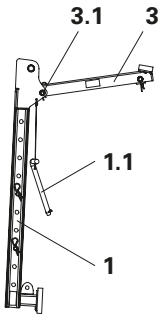

Fig. B1.04

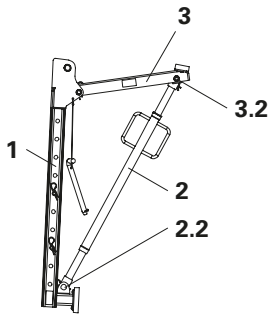

Fig. B1.05

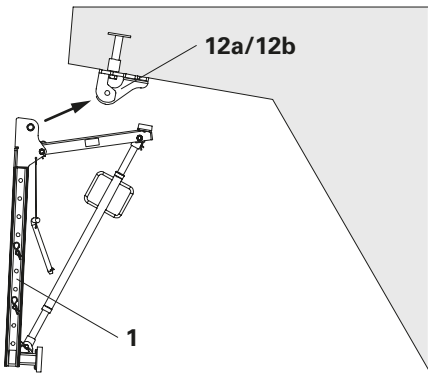

Fig. B1.06

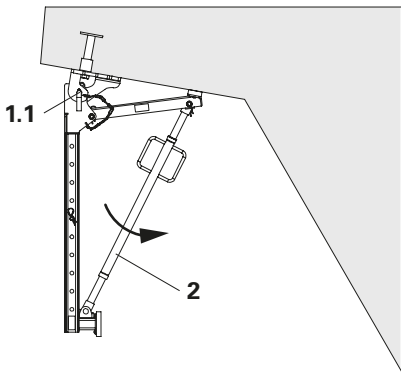

Fig. B1.07

Assembly on the cantilever 35–75 cm – additional steps

1. Insert Adj. Base Plate UJB 38 mm-80/55 (**9**) into Bracket Unit VGK (**1**) and vertically align.
2. Secure the Adj. Base Plate UJB 38 mm-80/55 (**9**) against falling out and unintentional twisting, see Section "Intermediate area on cantilevers 35 – 75 cm" on page 14. (Fig. B1.08)

Assembly with Bracket Post VGK 70 – additional steps

Cantilever 35–75 or abutment:

1. Bolt Eye Nut RCS DW15 (**59**) into Bracket Post VGK (**1**) using Pins Ø16x90 mm coat (**60**) and secure with Cotter Pins 4/1 ga (**61**). (Fig. B1.09 + Fig. B1.09a)

Cantilever ≥ 75 cm:

1. Attach Eye Nut RCS DW15 (**59**) to Bracket Cantilever VGK 50 (**3**) and Bracket Post VGK (**1**) using bolts and cotter pins (**3.1**). (Fig. B1.09 + Fig. B1.09a)

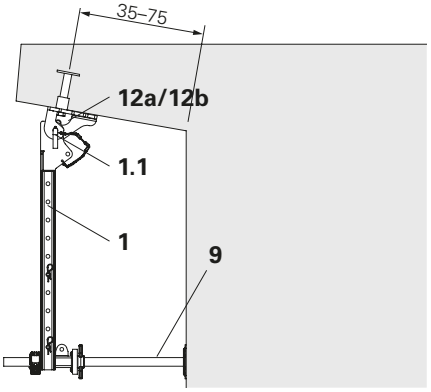

Fig. B1.08

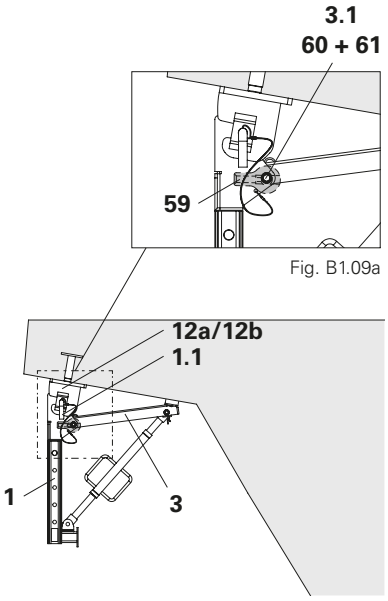

Fig. B1.09a

Fig. B1.09

Assembly on the abutment

When used on the abutment with Suspension Head Flex VGK, a scaffolding tube bracing must always be mounted.

Removing the advancing screw

1. Loosen and remove Advancing Screw M24 (**41**) from the rear side of the formlining, AF 19.
2. Remove formwork. (Fig. B1.10)

Assembly

1. Fasten Suspension Head VGK (**12**) to Screw-On Cone-2 M24/DW20 (**21**) with Screw ISO 4014-M24x070-10.9 (**23**). (Fig. B1.11)
2. Attach Bracket Post VGK (**1**) to Suspension Head VGK (**12**) and secure by means of locking pins Ø20x260 mm (**1.1**) and Cotter Pins 4/1 ga.
3. Assemble the scaffolding tube bracing. (Fig. B1.12 + Fig. B1.13)

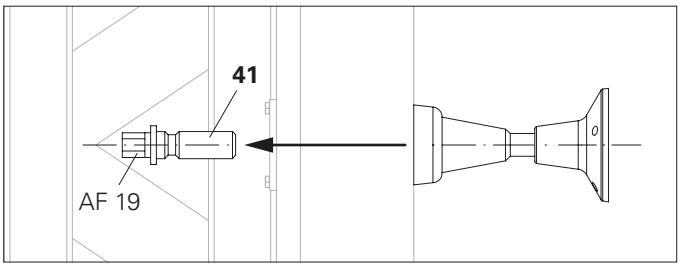

Fig. B1.10

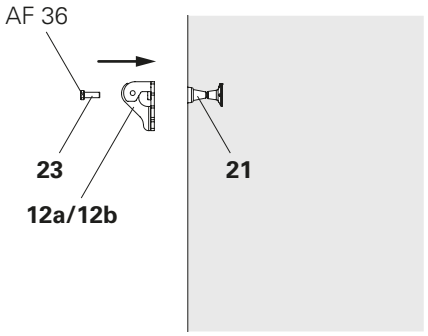

Fig. B1.11

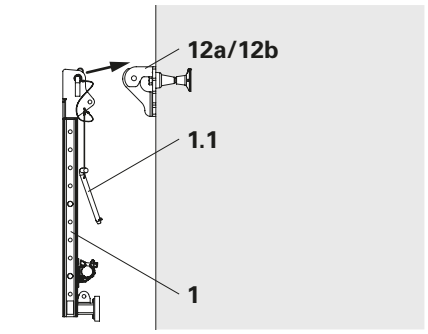

Fig. B1.12

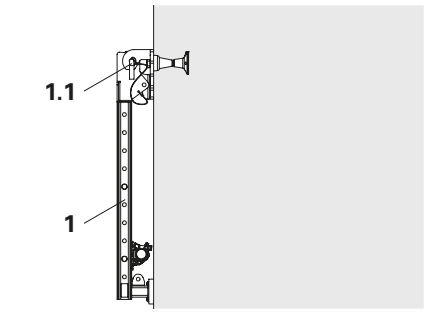

Fig. B1.13

Assembly of
Platform Cantilever Beam VGK

1. Position the upper Pin Ø16x90 mm coat (**1.3**) in the Bracket Post VGK at platform height.
2. Remove the lower Pin Ø16x90 mm coat (**4.1**).
3. Attach the platform beam (**4**) to the Pins Ø16x90 mm coat (**1.3**).
4. Secure with the lower Pin Ø16x90 mm coat (**4.1**). (Fig. B2.01)
5. Attach more platform beams.
6. Install planking, see Section A6.

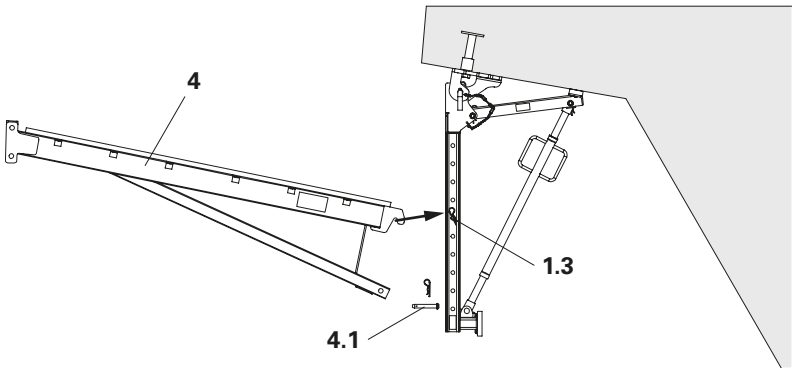

Fig. B2.01

Assembly of lateral protection

1. Insert Guardrail Post -2 HSGP (**29**) into all Platform Cantil. Beams VGK 170 (**4**). (Fig. B2.02)
2. Insert and secure lateral protection barriers, see Section "A6 Decks and lateral protection" on page 42.

Alternatively,
Lateral Protection Barriers PMB can be used instead of guardrails and toe boards.
(Fig. B2.03)

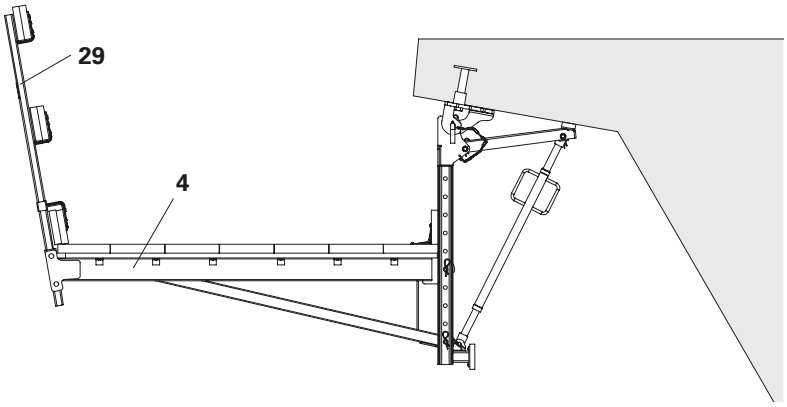

Fig. B2.02

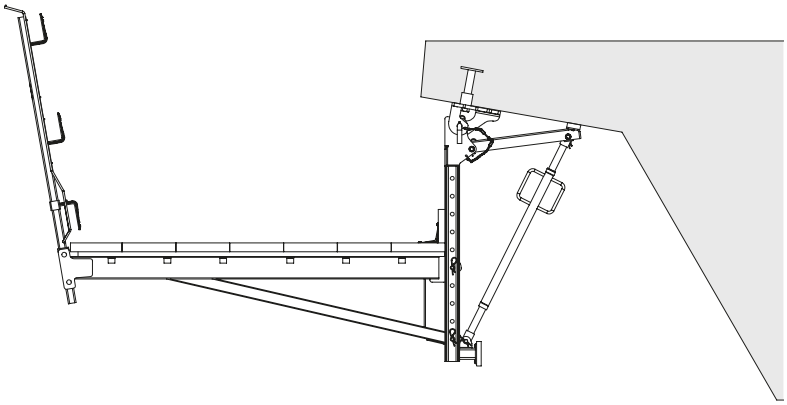

Fig. B2.03

Preparing for assembly

- A flat assembly surface is required for installation.
- If required, secure intermediate posts with temporary supports to prevent tipping over.
- Aligned and calibrated stops simplify the process of pre-assembling the work platform in a quick and precise manner (Fig. B3.01).

Fitting the assembly surface

1. Mount Suspension Head VGK Flex (**12a**) on the assembly surface at distance "c".
2. Mount sufficiently long squared timbers in the project-specific dimensions on the assembly surface.

(Fig. B3.01 + Fig. B3.01a)

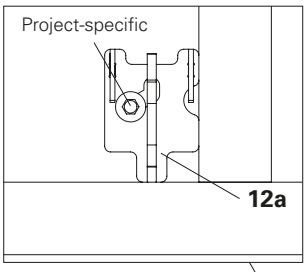

Fig. B3.01a

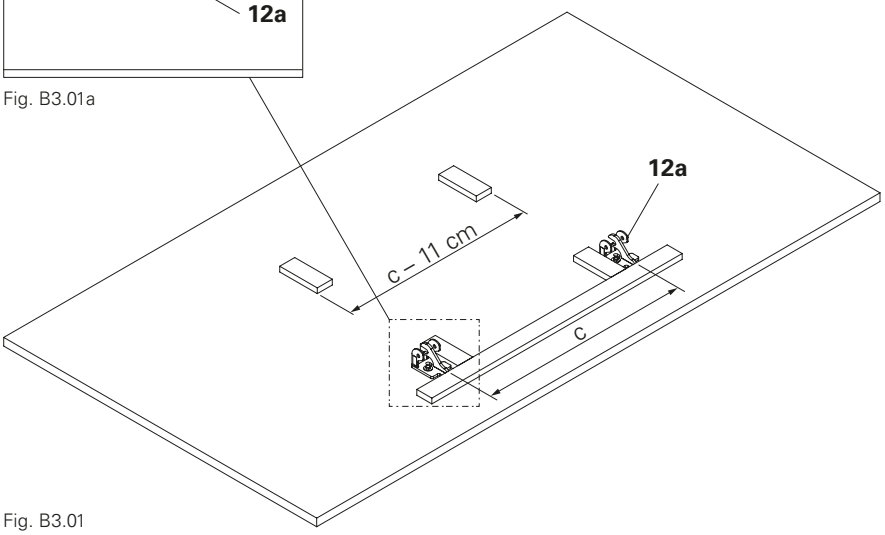

Fig. B3.01

Mounting Platform VGK 160

Assembly

1. Fit Bracket Post VGK (**1a/1b/1c**) onto Suspension Head VGK Flex (**12a**) with locking pin Ø20x260 mm (**1.1**), align and secure with Cotter Pin 4/1 ga (**1.2**).

(Fig. B3.02 + Fig. B3.02a)

PERI recommends fitting a scaffolding tube 48.3x3.2 mm (**11**) with Bracing Connectors VGK (**10**) onto the Bracket Posts VGK (**1a/1b/1c**) to brace the platforms.

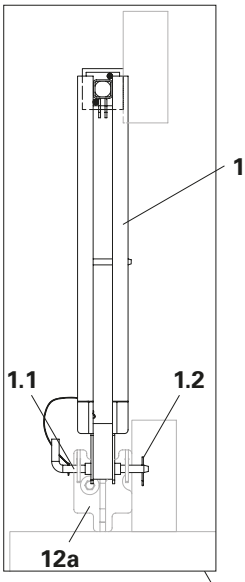

Fig. B3.02a

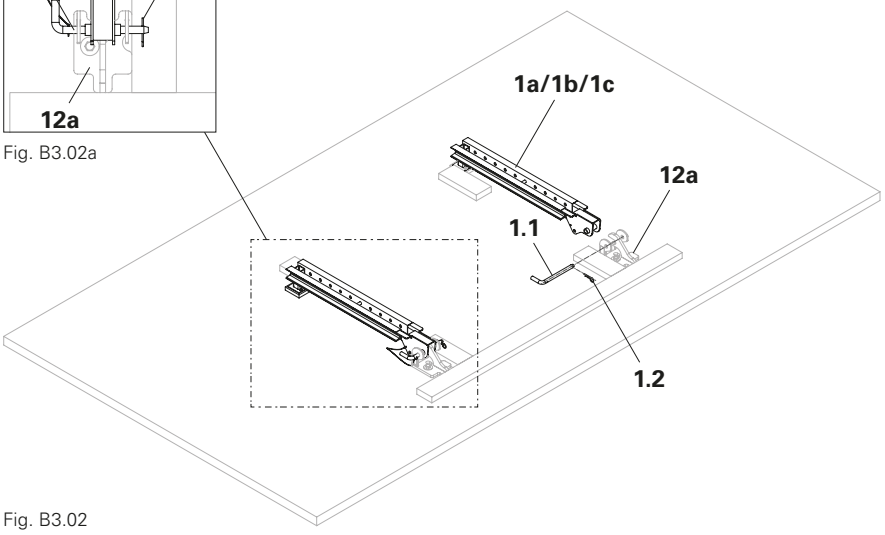

Fig. B3.02

B3 Pre-assembling complete platform unit

2. Fit Bracing Connector VGK (**10**) onto Bracket Post VGK (**1a/1b/1c**) with Pin Ø16x90 mm coat (**10.1**) and secure with Cotter Pin 4/1 ga (**10.2**).
3. Fit the scaffolding tube Ø48.3x3.2 mm (**11**) onto the Bracing Connectors VGK (**10**).

(Fig. B3.03)

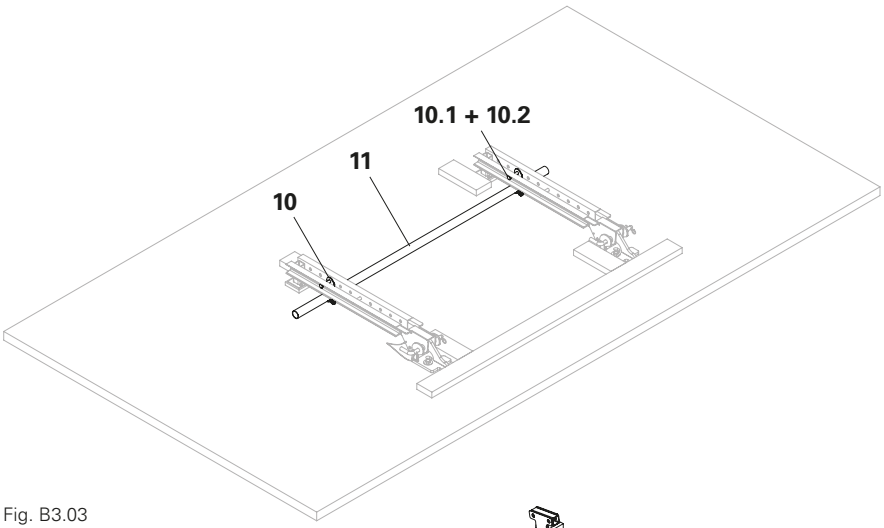

Fig. B3.03

3. Fit Platform Cantil. Beam VGK (**4**) onto Bracket Post VGK (**1a/1b/1c**) with Pin Ø16x90 mm coat (**1.3**) and Pin Ø16x90 mm coat (**4.1**) and secure with Cotter Pin 4/1 ga (**1.2 / 4.2**).

(Fig. B3.04)

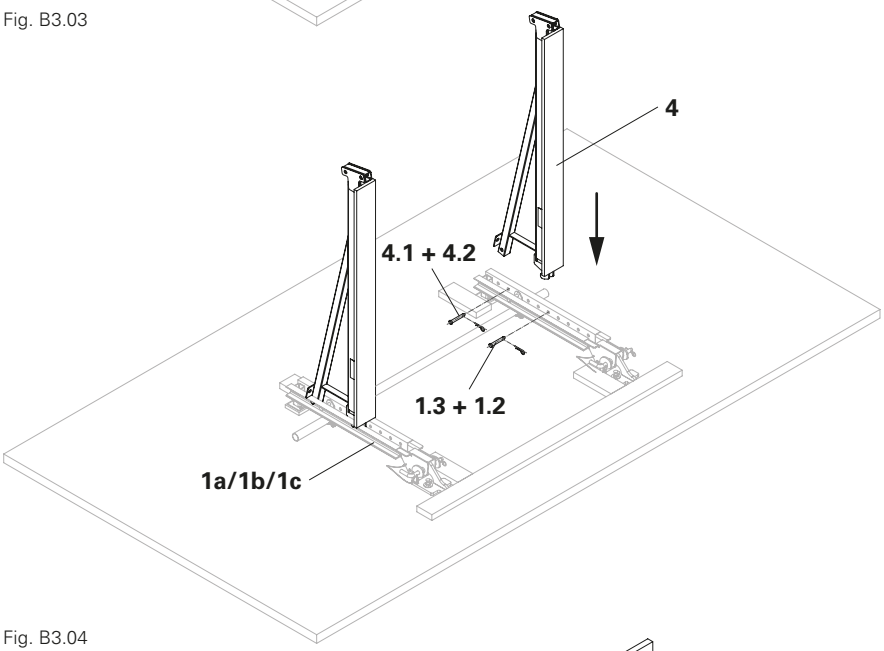

Fig. B3.04

4. Saw the multi-layer plywood sheet (**63**) to the specified dimensions.
5. Fit a multi-layer plywood sheet (**63**) onto Platform Cantil. Beam VGK (**4**) with Wood-Screws 6x80 SK-TX30 HPI (**39**).

(Fig. B3.05)

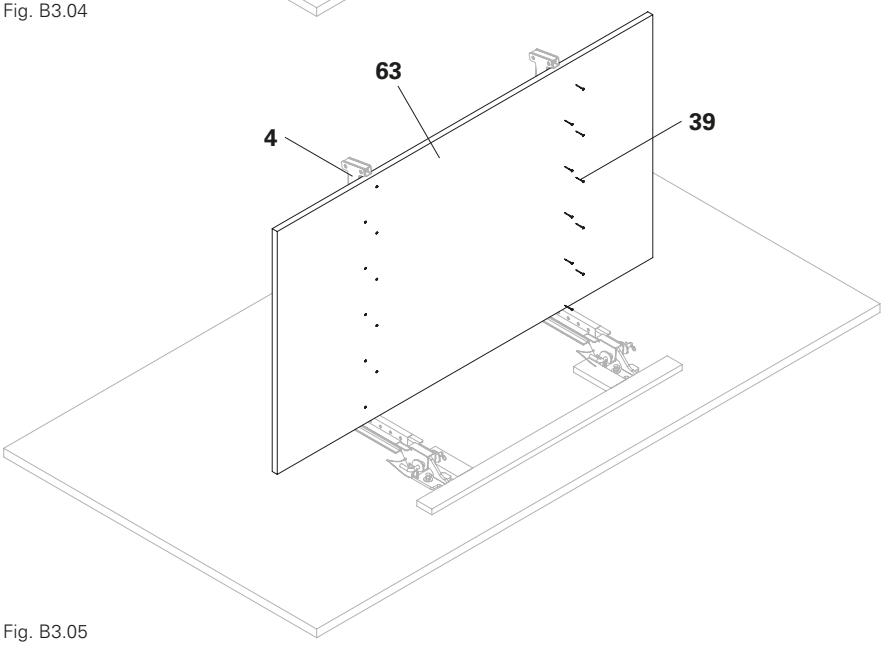

Fig. B3.05

6. Insert Guardrail Posts -2 HSGP (**29**) into the Platform Cantil. Beams VGK (**4**).
(Fig. B3.06)

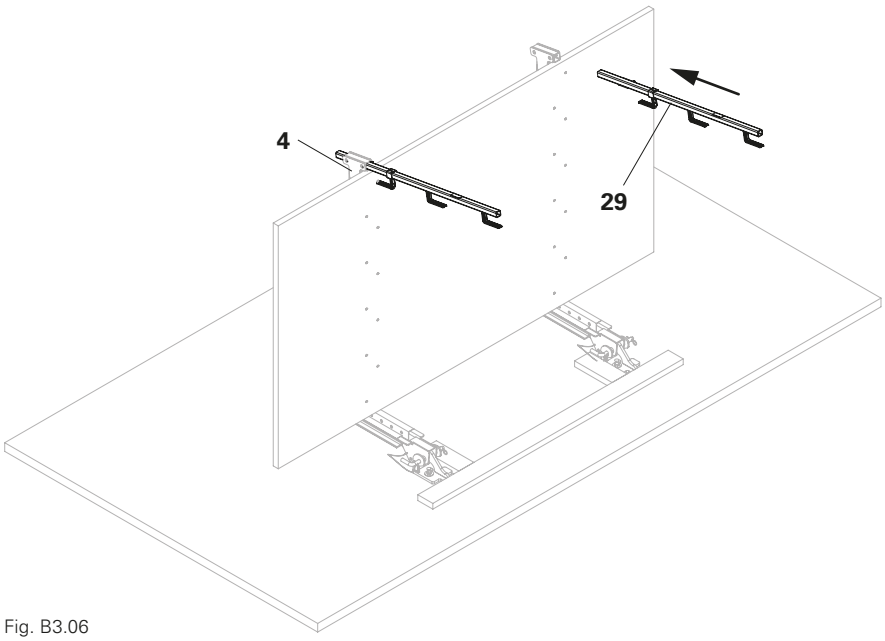

Fig. B3.06

7. Attach guardrail boards (**33**) to Guardrail Posts-2 HSGP (**29**) and fix them in place with wire pins or wood screws (**36**).
8 Fasten the toe board (**34**) to the multi-layer plywood sheet (**63**) with angle brackets 90x90x65 mm (**64**) and wire pins or wood screws (**36**).
(Fig. B3.07)
9. Remove the platform unit from the Suspension Head VGK Flex (**12a**).

Alternatively, Lateral Protection Barriers PMB can be used instead of guardrails and toe boards.

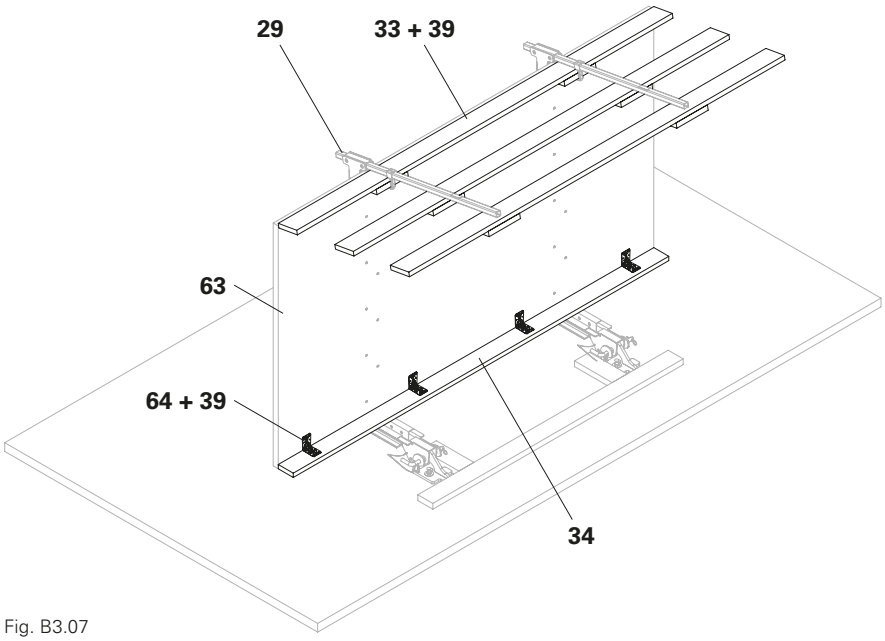

Fig. B3.07

Installing Platform VGK Flex

Assembly

1. Fit Bracket Post VGK (**1b/1c**) onto Suspension Head VGK Flex (**12a**) with locking pin Ø20x260 mm (**1.1**), align and secure with Cotter Pin 4/1 ga (**1.2**).

(Fig. B3.02 + Fig. B3.02a)

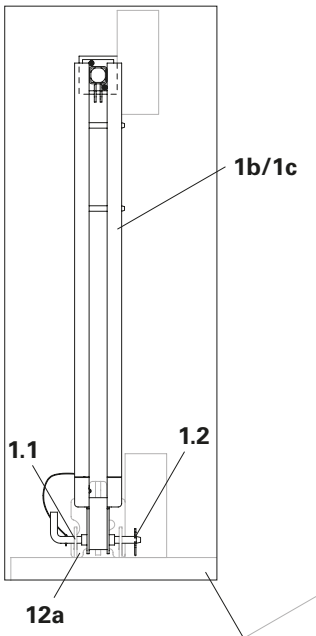

Fig. B3.08a

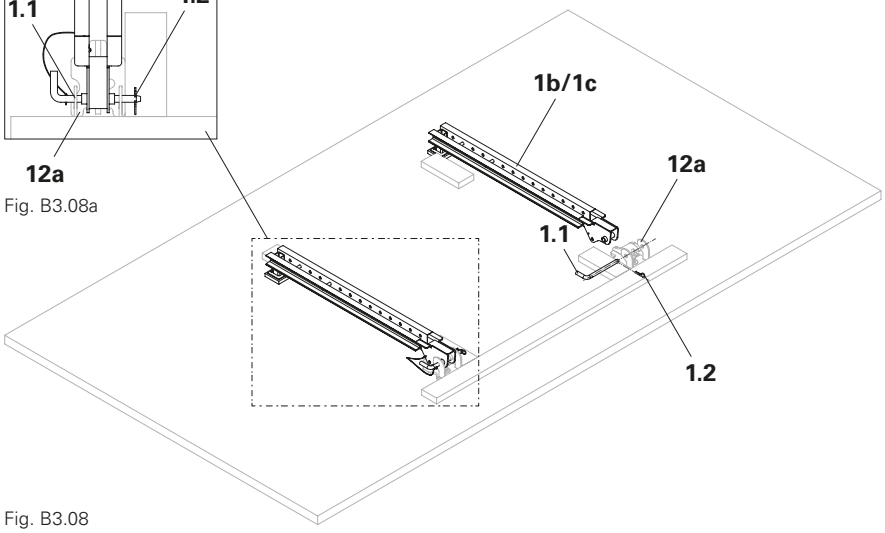

Fig. B3.08

2. Fit Bracing Connector VGK (**10**) onto Bracket Post VGK (**1b/1c**) with Pin Ø16x90 mm coat (**10.1**) and secure with Cotter Pin 4/1 ga (**10.2**).
3. Fit the scaffolding tube Ø48.3x3.2 mm (**11**) onto the Bracing Connectors VGK (**10**).

(Fig. B3.09)

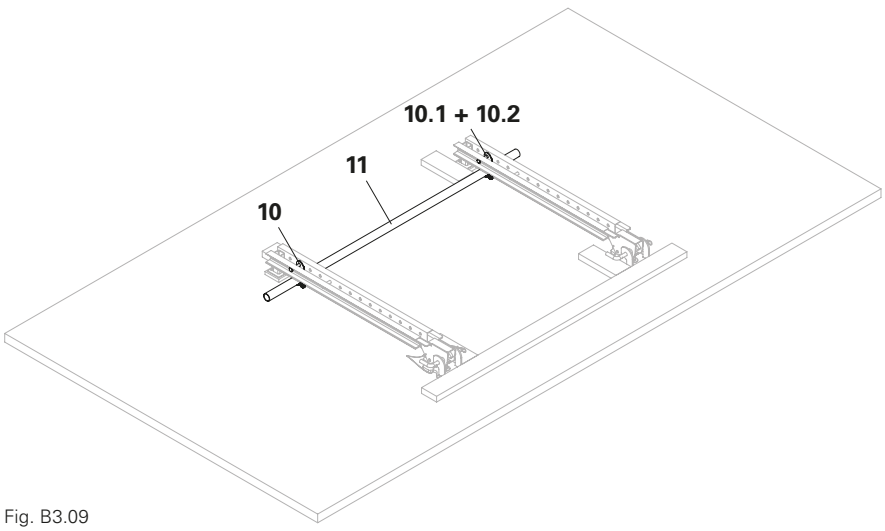

Fig. B3.09

4. Fit Formwork Post VGK (**7/8**) onto Bracket Post VGK (**1b/1c**) with Pin Ø16x90 mm coat (**7.2a**) and secure with Cotter Pin 4/1 ga (**7.2a**).
5. Fit Kicker Brace AV (**2**) onto Bracket Post VGK (**1b/1c**) with Pin Ø16x90 mm coat (**1.3**) and Cotter Pin 4/1 ga (**1.2**).
6. Fit Kicker Brace AV (**2**) onto Formwork Post VGK (**7/8**) with Pin Ø16x90 mm coat (**7.1b**) and Cotter Pin 4/1 ga (**7.2b**).

(Fig. B3.10)

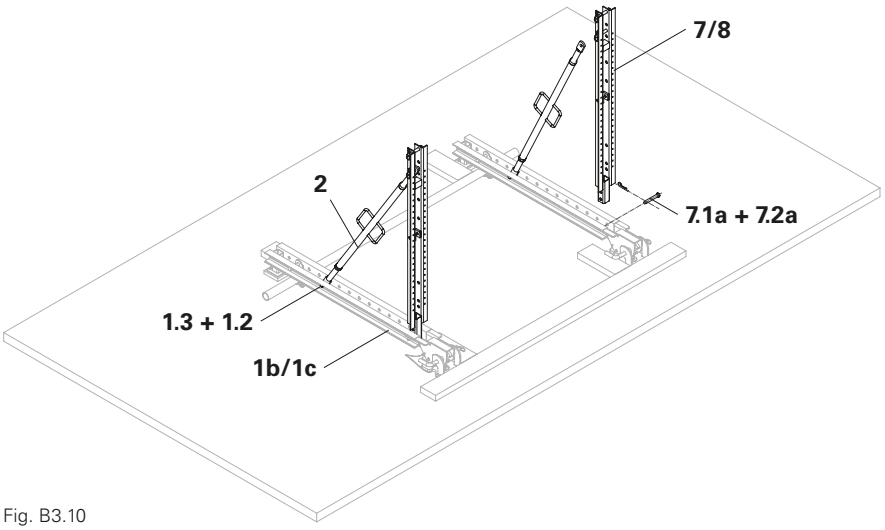

Fig. B3.10

7. Remove Pin Ø16x90 mm coat (**7.1b**) and Cotter Pin 4/1 ga (**7.2b**) from the Kicker Brace AV (**2**).
8. Insert Guardrail Holder VGK (**62**) into Formwork Post VGK (**7/8**).
9. Fit Guardrail Holder VGK (**62**) at the rear with Pin Ø16x90 mm coat (**7.1a**) and Cotter Pin 4/1 ga (**7.2a**).
10. Fit Guardrail Holder VGK (**62**) and Kicker Brace AV (**2**) at the front with Pin Ø16x90 mm coat (**7.1b**) and Cotter Pin 4/1 ga (**7.2b**).
11. Insert Guardrail Posts -2 HSGP (**29**) into the Guardrail Holders VGK (**62**).

(Fig. B3.11)

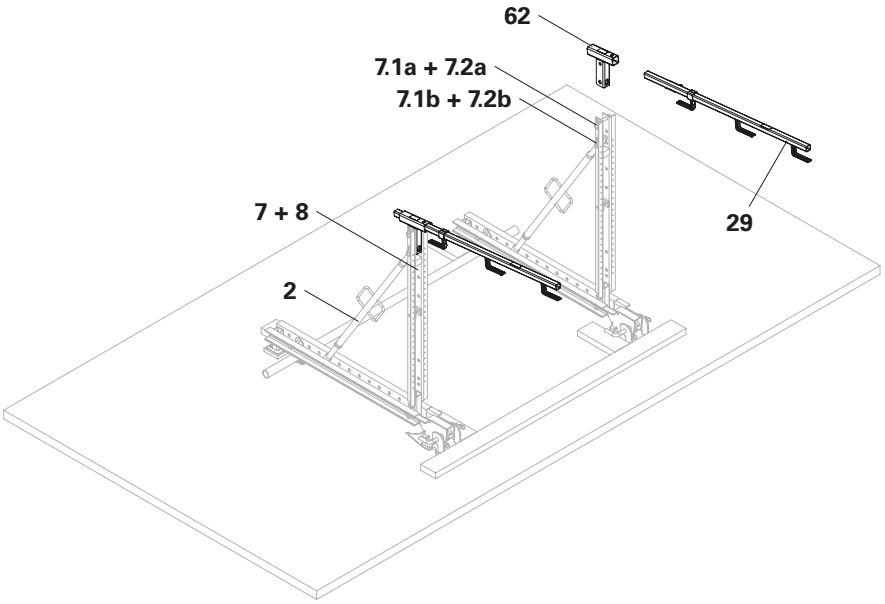

Fig. B3.11

If Suspension Links A13 (**75**) need to be fitted, see Section "With suspension link A13" on page 65.

12. Saw the multi-layer plywood sheet (**63**) to the specified dimensions.
13. Fit a multi-layer plywood sheet (**63**) onto Formwork Post VGK (**7/8**) with Wood-Screw 6x80 SK-TX30 HPI (**39**).

(Fig. B3.12)

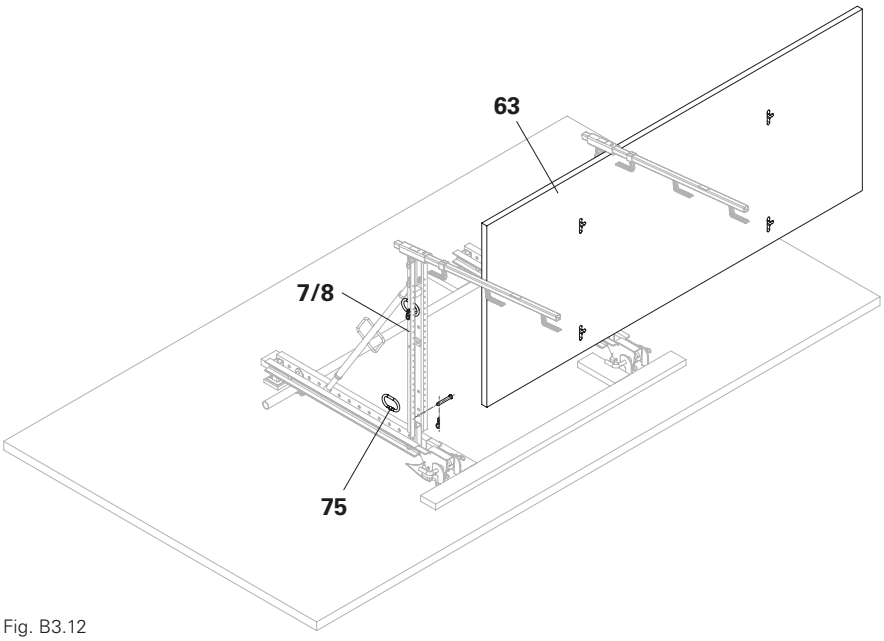

Fig. B3.12

14. Attach guardrail boards (**33**) to Guardrail Posts-2 HSGP (**29**) and fix them in place with wire pins or wood screws (**36**).
15. Fasten the toe board (**34**) to the multi-layer plywood sheet (**63**) with angle brackets 90x90x65 mm (**64**) and wire pins or wood screws (**36**).

(Fig. B3.13)

16. Remove the platform unit from the Suspension Head VGK Flex (**12a**).

Alternatively,
Lateral Protection Barriers PMB can be used instead of guardrails and toe boards.

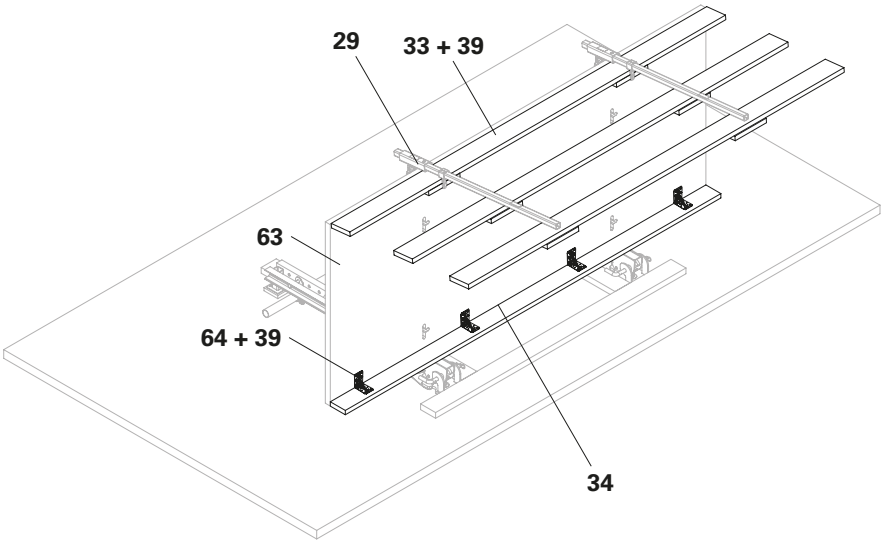

Fig. B3.13

With transportation fork

- Guide the work platform with ropes when attaching it.
- Do not stand under the suspended load.
- Fit the locking pin Ø20x260 mm (**1.1**) from a safe workplace.

Attaching

1. Pick up platform unit with suitable fork (**70**).
2. Attach the platform unit to the Suspension Shoes VGK Flex (**12a**).
3. Fix the platform unit to Suspension Shoes VGK Flex (**12a**) with locking pin Ø20x260 mm (**1.1**) and secure with Cotter Pin 4/1 ga (**1.2**).

(Fig. B4.01 – Fig. B4.01b)

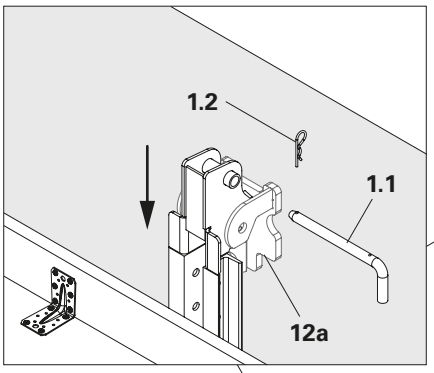

Fig. B4.01a

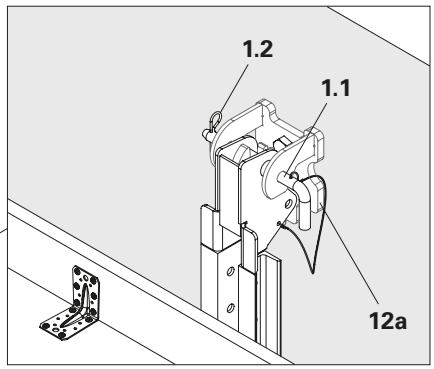

Fig. B4.01b

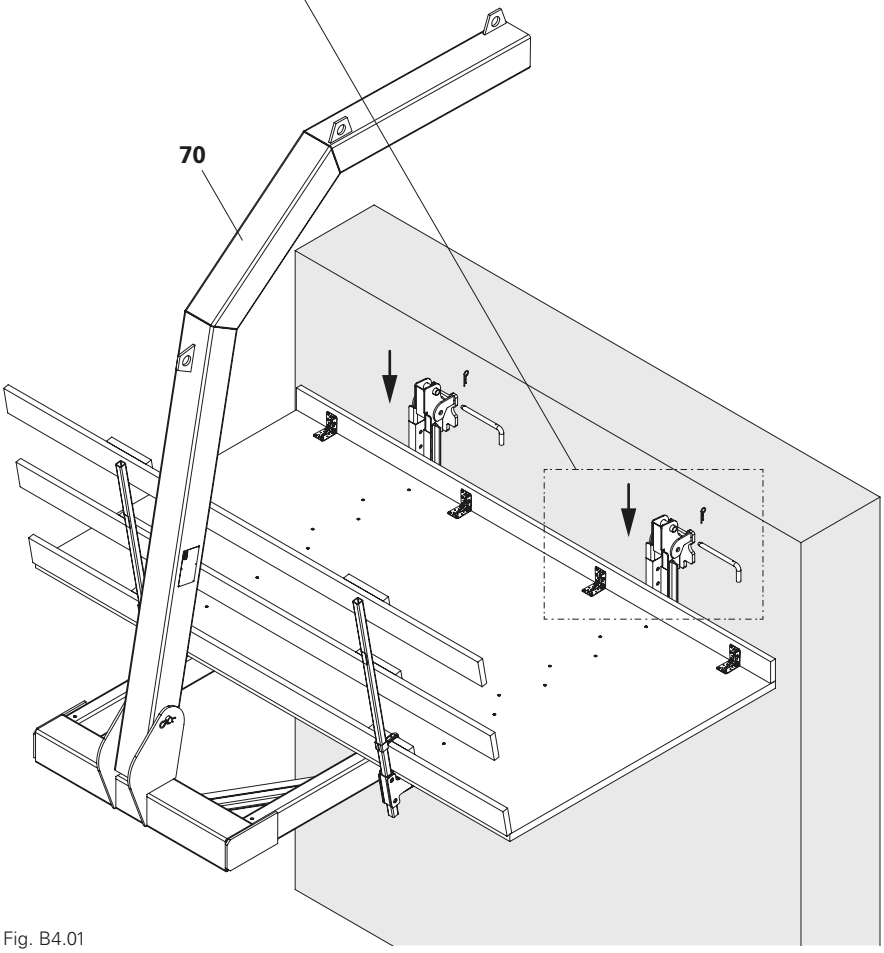

Fig. B4.01

B4 Attaching complete platform unit

With round slings

- Use round slings with sufficient load-bearing capacity.
- Guide the work platform with ropes when attaching it.
- Do not stand under the suspended load.
- Mount toe boards (**34**) only after the suspension process.
- Fit the locking pin Ø20x260 mm (**1.1**) from a safe workplace.

Attaching VGK 160

1. Attach round slings (**71**) to the front and rear at the specified points on Platform Cantilever Beam VGK (**4**).
2. Attach round slings (**71**) to the crane with four-strand hanger (**72**) and lift platform unit.
3. Attach the platform unit to the Suspension Shoes VGK Flex (**12a**).
4. Fix the platform unit to Suspension Shoes VGK Flex (**12a**) with locking pin Ø20x260 mm (**1.1**) and secure with Cotter Pin 4/1 ga (**1.2**).

(Fig. B4.02 + Fig. B4.02a + Fig. B4.01b)

Attaching VGK Flex

1. Attach round slings (**71**) to the front and rear at the specified points on Formwork Post VGK (**7/8**).
2. Attach round slings (**71**) to the crane with four-strand hanger (**72**) and lift platform unit.
3. Attach the platform unit to the Suspension Shoes VGK Flex (**12a**).
4. Fix the platform unit to Suspension Shoes VGK Flex (**12a**) with locking pin Ø20x260 mm (**1.1**) and secure with Cotter Pin 4/1 ga (**1.2**).

(Fig. B4.03 + Fig. B4.03a + Fig. B4.01b)

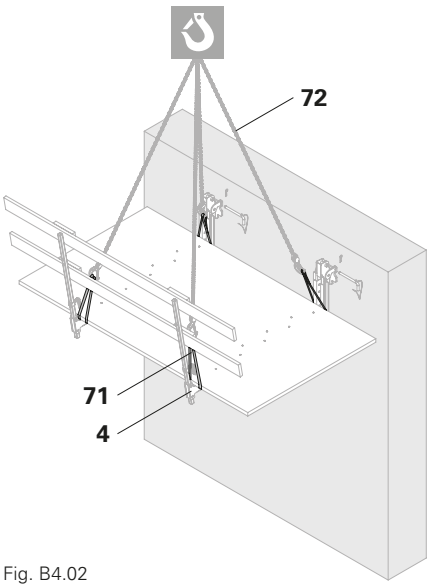

Fig. B4.02

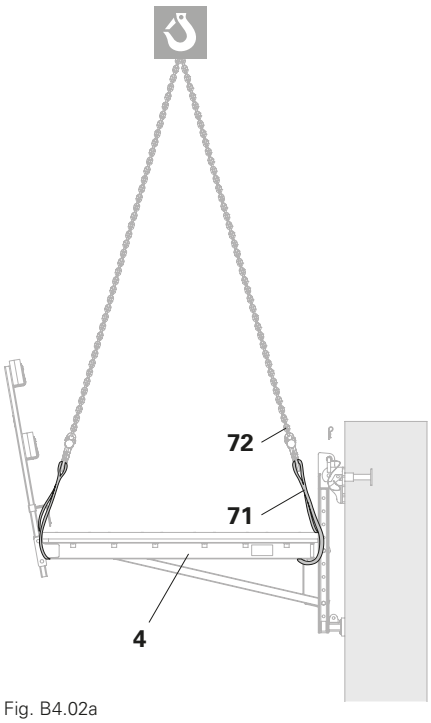

Fig. B4.02a

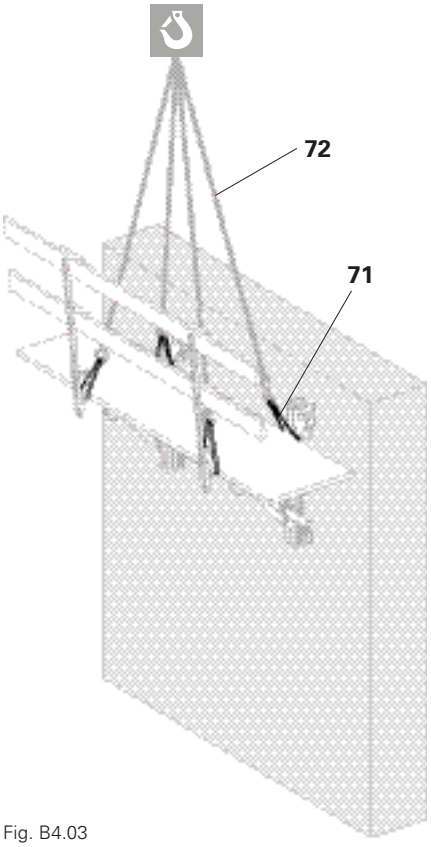

Fig. B4.03

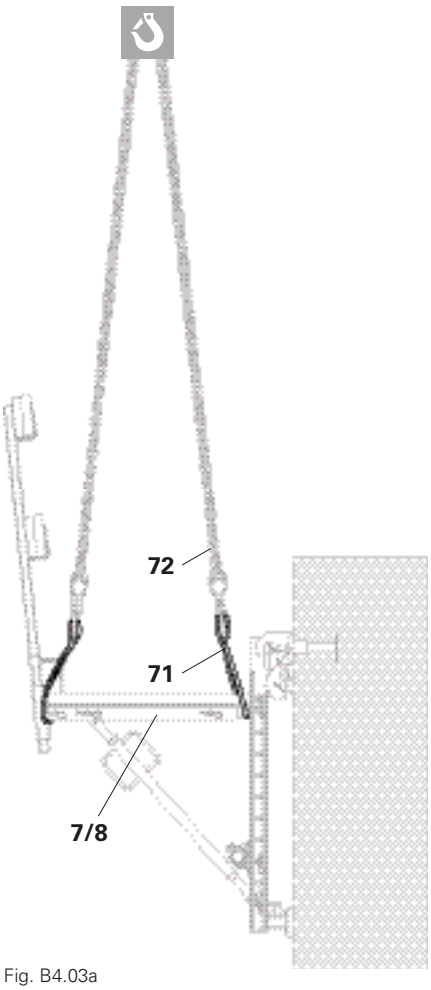

Fig. B4.03a

With suspension link A13

- Platform Units VGK Flex with Formwork Post VGK 120 can be moved on a Suspension Link A13.
- The Lifting Gear 4 skeins has a chain length of 2.0 to 4.0 m.

Assembling Suspension Link A13

1. Cut four 10 x 2 cm slots at the indicated intervals.

(Fig. B4.04).

2. Guide Suspension Link A13 (**75**) into the opening, fit with Pin Ø16x90 mm coat (**60**) and secure with Cotter Pin 4/1 ga (**61**).
3. Fit the screw into the deck to prevent the Suspension Link A13 (**75**) from falling through to the bolt.

(Fig. B4.05 + Fig. B4.06)

- Choose a chain sling length that ensures that the solid angle of the chain inclination against the vertical is not more than 40°. (Fig. B4.05 + Fig. B4.06)
- Asymmetrical platforms can also be moved, but the centre of gravity must be in the middle third of c.
- Separate verification must be provided in the event of deviations.

Narrow platform/wide platform

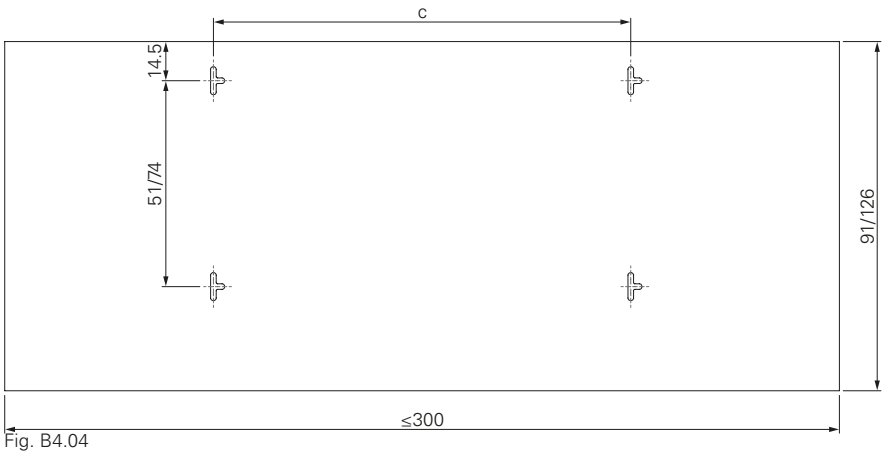

Fig. B4.04

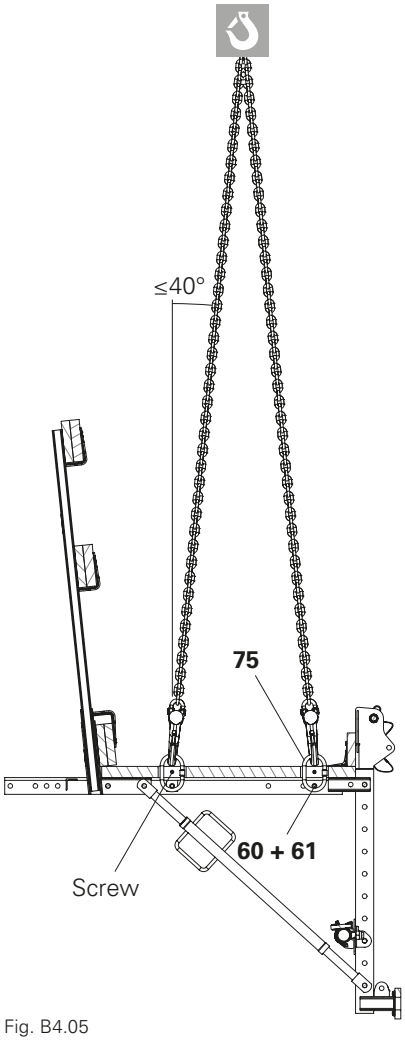

Fig. B4.05

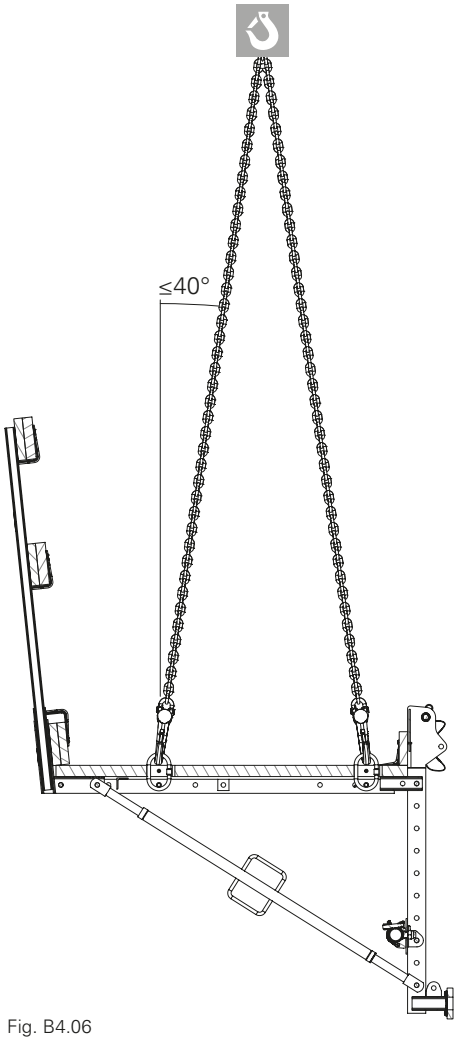

Fig. B4.06

Assembly with the Formwork Support VGK 60

Note

Higher concrete pressure on Formwork Support VGK 60 if the cantilevered parapet is higher than 50 cm!
This can lead to deformation of Formwork Support VGK 60.
⇒ Centre Kicker Braces AV 82 and, if necessary, secure them against shifting, e.g. using shims or squared timbers. (Fig. B5.02a)

- The lateral formwork can only be fixed in place on Formwork Post VGK 70 with wood screws.
- This version is only possible at the abutment with Suspension Head VGK (**12b**).

Assembly of Formwork Support VGK

1. Screw Tie Rod DW15 (**56**) into Eye Nut RCS DW15 (**59**)
2. Screw Hex-Nut DW15 SW30 50 mm (**57**) into Tie Rod DW15 (**56**) and adjust to match the required dimension beforehand.
3. Insert Hex-Nut DW15 SW30 50 mm (**57**) into Formwork Support VGK 60 (**77**) and screw in until contact is made with the front plate (**77.2**).
4. Fasten Formwork Support VGK 60 (**77**) to the planking (**35**) with wood screws. (Fig. B5.01a – Fig. B5.01c)

Assembly of Formwork Post VGK for side formwork

1. Fasten Formwork Post VGK 70 (**7**) to Formwork Support VGK 60 (**77**) with bolts
2. Fix Kicker Brace AV 82 (**2a**) to the rearmost hole in Formwork Support VGK 60 (**77**) and to the top hole in Formwork Post VGK 70 (**7**) with bolts in each case.
3. Insert beam support (**7.1**) in the corresponding position. (Fig. B5.02)

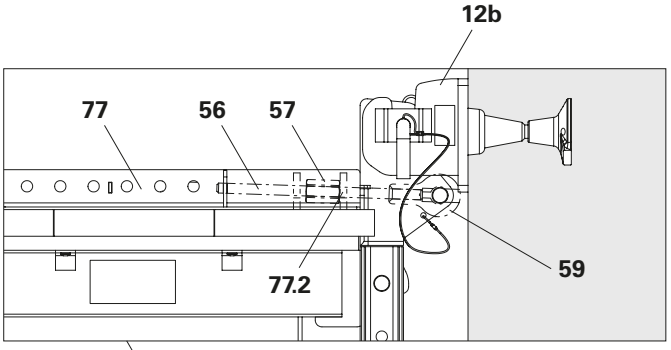

Fig. B5.01c

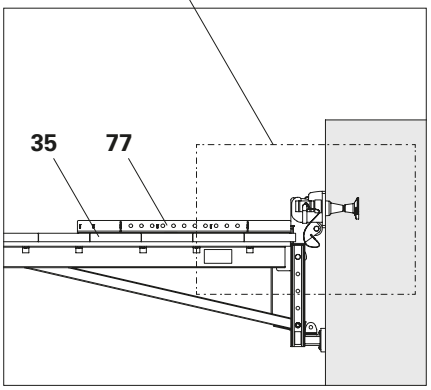

Fig. B5.01a

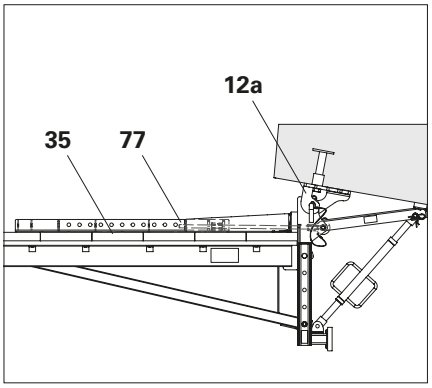

Fig. B5.01b

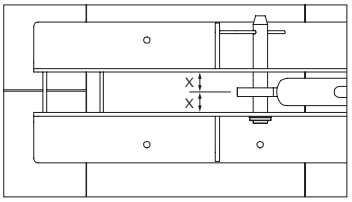

Fig. B5.02a

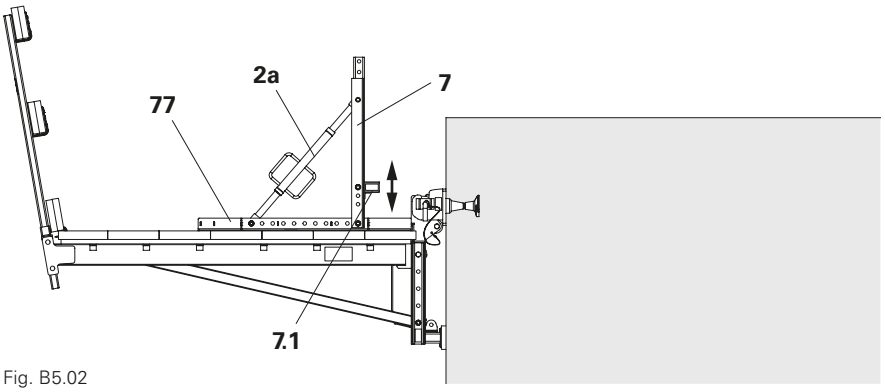

Fig. B5.02

Formwork assembly

1. Position the slab formwork at the required height by means of squared timbers and wedges.
   → The formwork panel (**58**) must rest on the beam support (**7.1**) with x <30 cm.
2. Place the side formwork on the beam support (**7.1**) and slab formwork, and fix to Formwork Post VGK 70 (**7**) with wood screws (**36**). (Fig. B5.03)

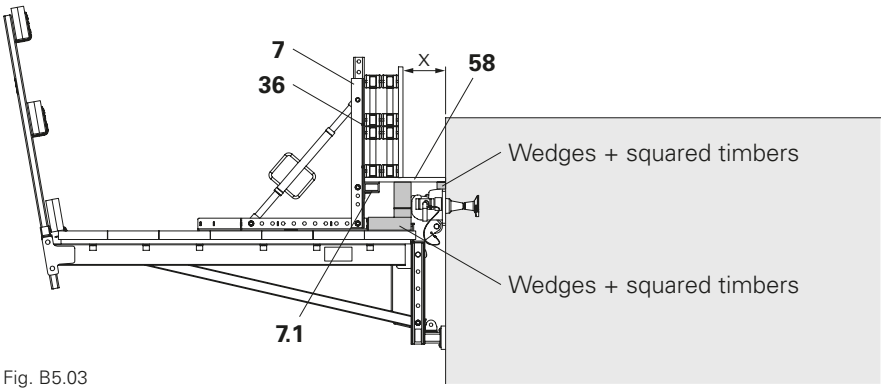

Fig. B5.03

Assembly with the Formwork Support VGK 100

Assembly of Formwork Fixing VGK

1. Release wedge (**5.1**).
2. Insert Formwork Fixing-2 VGK (**5**) into Bracket Post VGK (**1**).
3. Adjust Formwork Fixing-2 VGK (**5**) to the required height with the spindle.
4. Secure Formwork Fixing-2 VGK (**5**) with a wedge (**5.1**).
5. Position internal formwork (**54**) on Formwork Fixing-2 VGK (**5**) and align it. (Fig. B5.04)

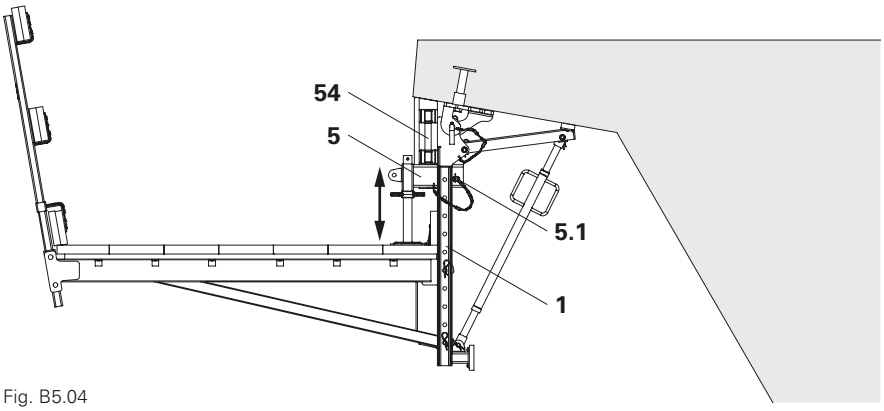

Fig. B5.04

Assembly of Formwork Support VGK

1. Fix Formwork Support VGK (**6**) to Formwork Fixing-2 VGK (**5**) with bolts (**6.4**).
2. Bring the guide carriage (**6.1**) into position.
3. Fasten the bottom formwork to the guide carriage (**6.1**) with 2x Wood-Screws 6x60 SK-TX30 HPI (**55**).
4. Align slab formwork with pivoting base spindle (**6.3**) and guide carriage (**6.1**).
5. Fix both wedges (**6.2**) on the guide carriage (**6.1**) using a sledge hammer (**5 kg**). (Fig. B5.05 + Fig. B5.05a)

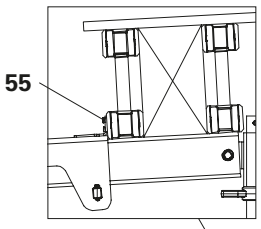

Fig. B5.05a

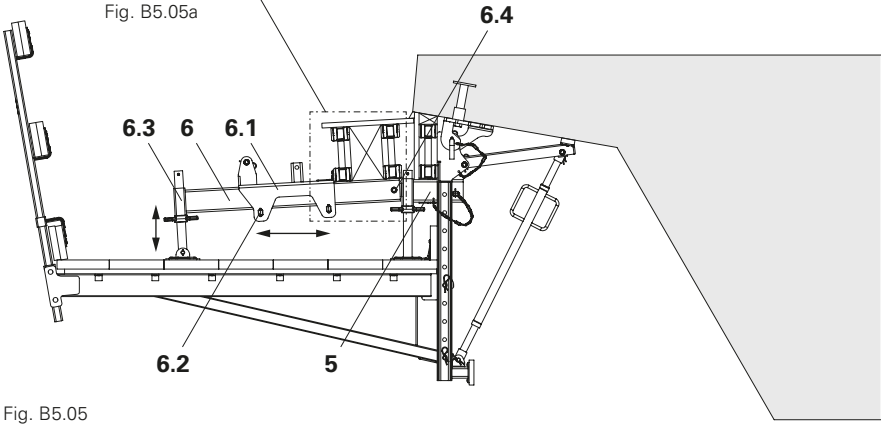

Fig. B5.05

Assembly of Formwork Post VGK for side formwork

1. Attach Formwork Post VGK 70 (**7**) to the guide carriage (**6.1**) by means of bolts.
2. Fix Kicker AV 82 (**2a**) to the guide carriage (**6.1**) and Formwork Post VGK 70 (**7**) with bolts.
3. Insert beam support (**7.1**) in the corresponding position. (Fig. B5.06 + Fig. B5.06a)

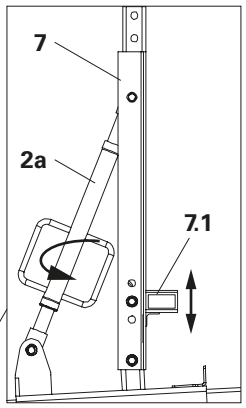

Fig. B5.06a

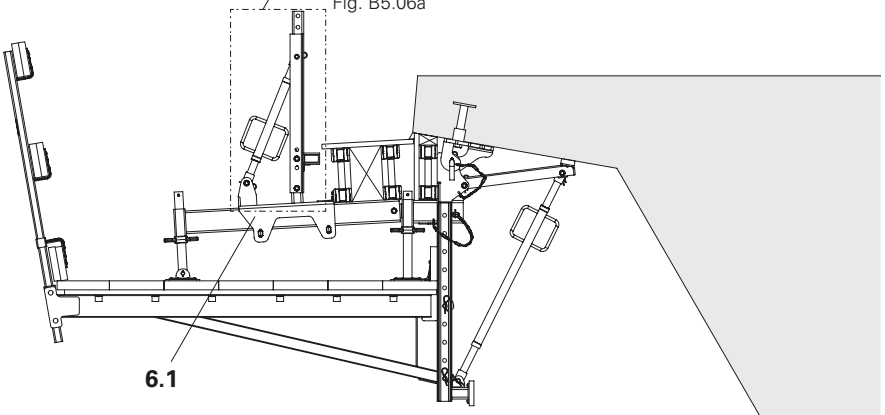

Fig. B5.06

Assembly of side formwork

1. Place the side formwork on the beam support (**7.1**) and slab formwork, and fix to Formwork Post VGK 70 (**7**) with wood screws.
2. Align Formwork Post VGK 70 (**7**) with Kicker AV 82 (**2a**). (Fig. B5.07)

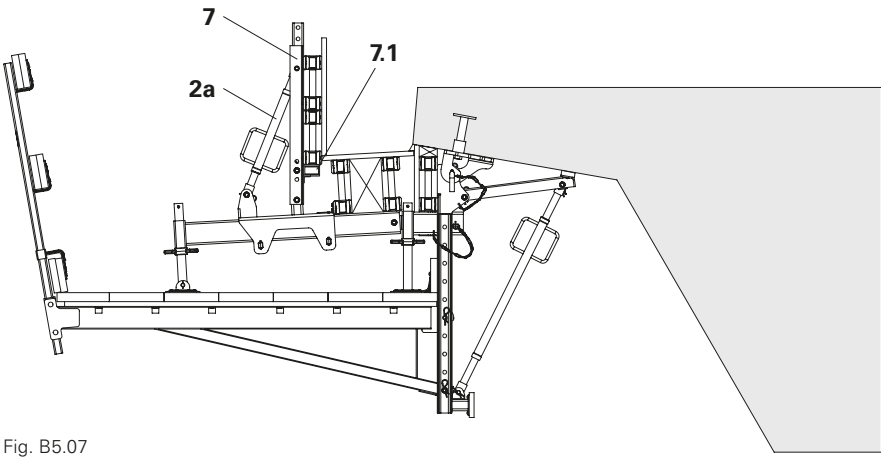

Fig. B5.07

Arrangement of formwork girders

For optimal concreting results, offset the joints of formwork girders for the slab and side formwork. (Fig. B6.01)

Top view

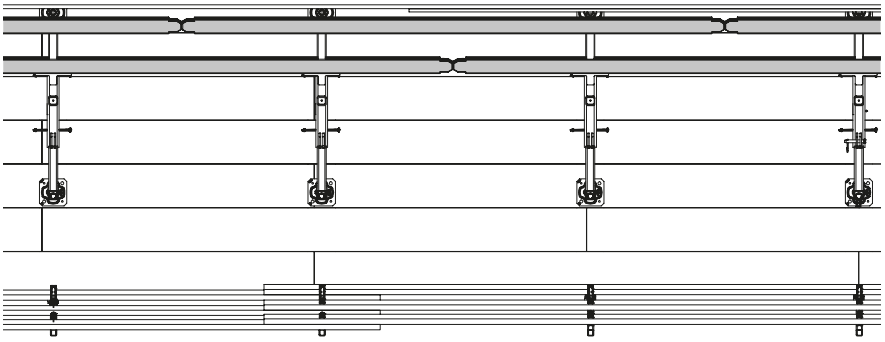

Fig. B6.01

Forward inclination of the lateral formwork

The forward inclination "v" is dependent on the height of cantilevered parapet "H" and refers to the upper edge of the cantilevered parapet. (Fig. B6.02)

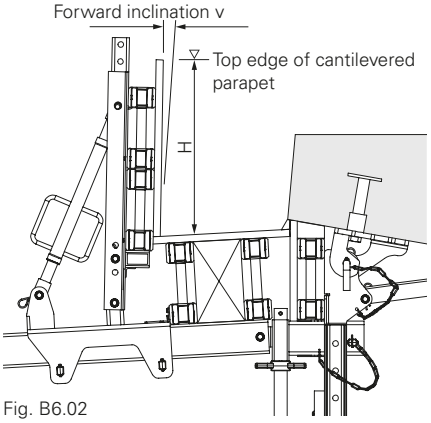

Fig. B6.02

Cantilevered parapet height H [cm]	Forward inclination v* [mm]
100	23
80	9
60	3
40	0

*Values at 1 m influence width.
Intermediate values can be interpolated linearly.

Tab. B6.01

Danger

Danger associated with overloading!
Cantilevered parapet brackets can fall to the ground.

⇒ Do not pour concrete directly from the mixer truck or concrete bucket into the formwork construction.

⇒ Avoid any accumulation of concrete in the area of the cantilevered parapet track.
(Fig. C1.01)

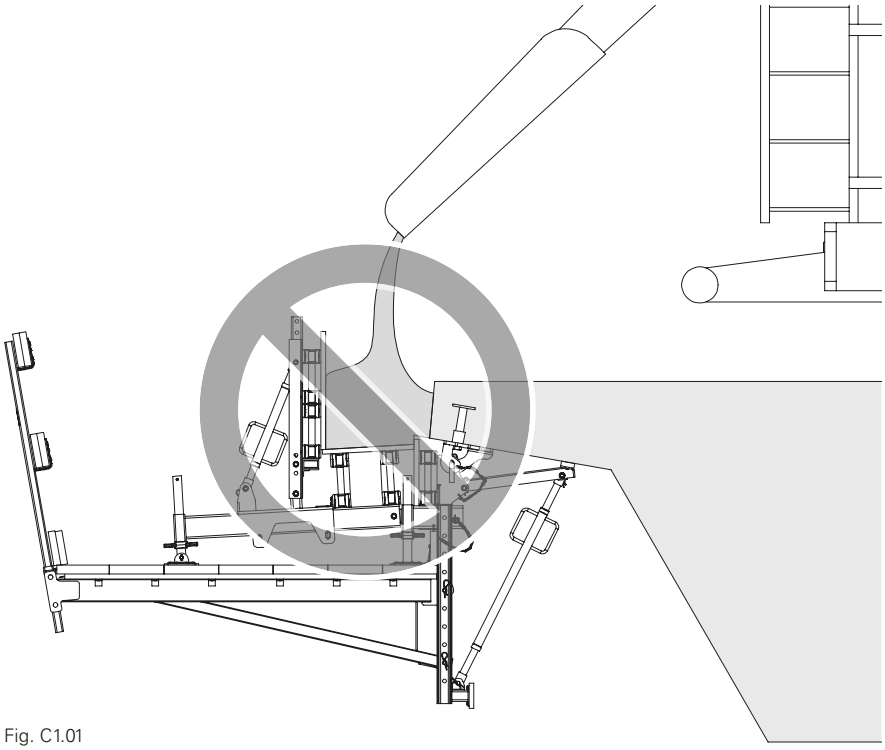

Fig. C1.01

Concreting

1. Pour concrete on the bridge cantilever.
2. Bring concrete into the formwork construction using a rake or something similar.
3. Compact the concrete.
(Fig. C1.02)

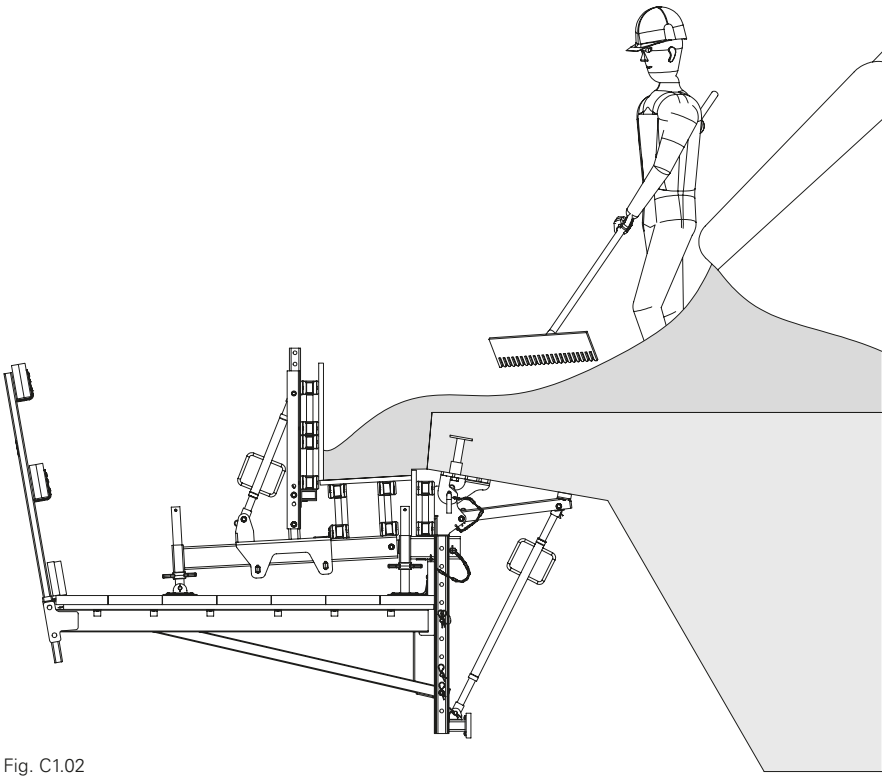

Fig. C1.02

Formwork unit

- Striking and dismantling of the formwork unit is carried out from the platform unit.
- Deshuttering and dismantling is the same for all construction sizes using the reverse order of shuttering and assembly.

Side plate

1. Turn back Formwork Post VGK 70 (**7**) with Kicker AV 82 (**2a**) until side plate comes off the cantilevered parapet.
2. Remove the side formwork. (Fig. C2.01)

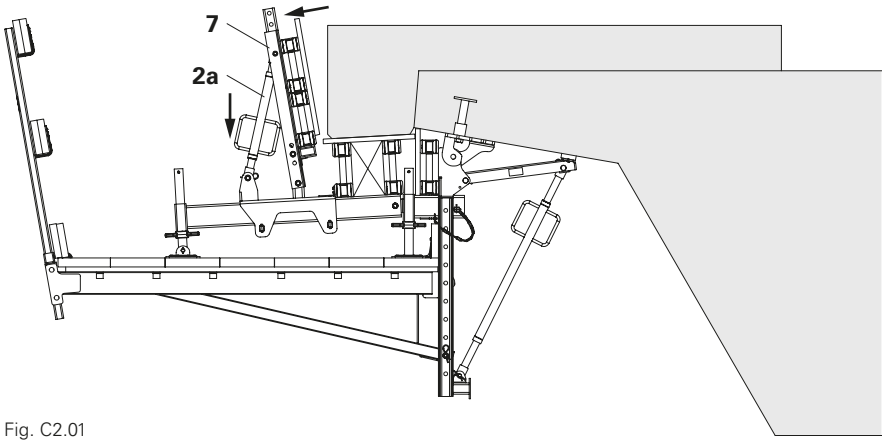

Fig. C2.01

Slab formwork

1. Release wedge (**5.1**) on Formwork Fixing-2 VGK (**5**) and wedges (**6.2**) on Formwork Support VGK (**6**).
2. Turn spindle downwards until the slab formwork has been released from the cantilevered parapet. (Fig. C2.02)

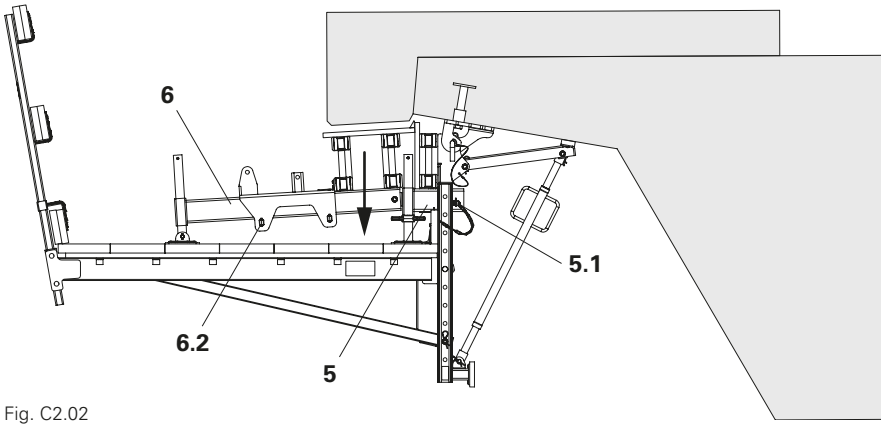

Fig. C2.02

Formwork unit

1. Remove Formwork Post VGK 70 (**7**) and Kicker AV 82 (**2a**).
2. Remove floor formwork.
3. Remove Formwork Supports VGK 100 (**6**).
4. Remove Formwork Fixing-2 VGK (**5**) and internal formwork. (Fig. C2.03)

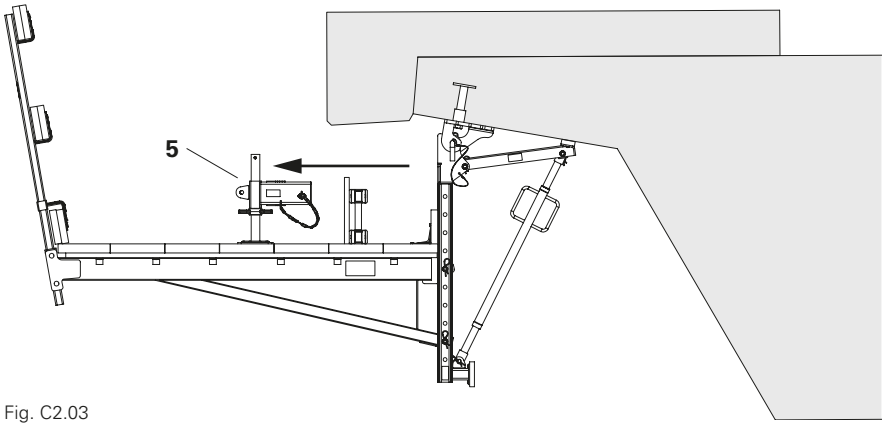

Fig. C2.03

On the cantilever

Danger

Leading edges are present during assembly!

There is a risk of falling off the cantilevered parapet.

⇒ Dismantle platform unit and platform unit from a safe and secure working area, e.g.:
- Telescopic work platform.
- Temporary working scaffold.
- Personal protective equipment to prevent falling from a height (PPE).

Depending on the stage of construction, temporary safety measures to prevent falling may be required.

Platform unit

1. Remove guardrail boards (**33**) and Guardrail Post-2 HSGP (**29**).
2. Remove the planking (**35**) continuously. (Fig. C3.01)
3. Remove Platform Cantil. Beam VGK 170 (**4**).
4. Re-install bolts and cotter pins (**1.3**) in Bracket Post VGK (**1**). (Fig. C3.02)

Bracket unit

1. Remove locking pins Ø20x260 mm (**1.1**) from Suspension Head VGK (**12**) and remove the bracket unit. (Fig. C3.03)
2. Place bracket console unit on the ground and dismantle.
3. Loosen Screw ISO 4014-M24x100-8.8-ga (**16**) and remove Suspension Head VGK (**12**).
4. Seal tie holes, for example with concrete plugs, see Section "A5 Anchoring" on page 39. (Fig. C3.04)

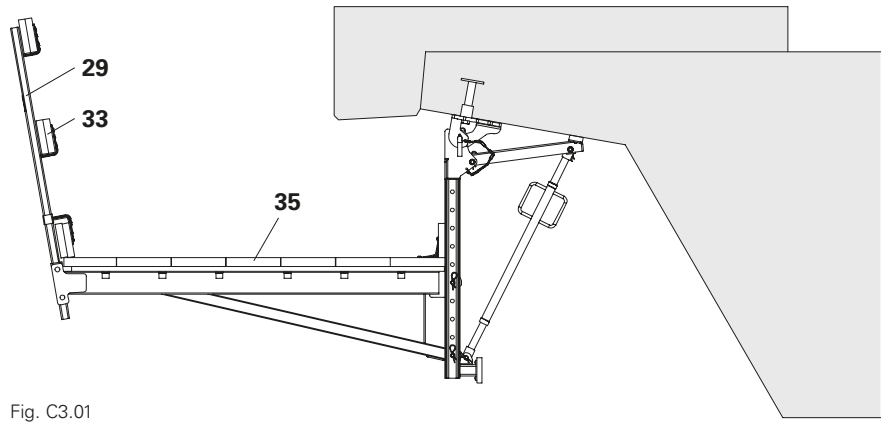

Fig. C3.01

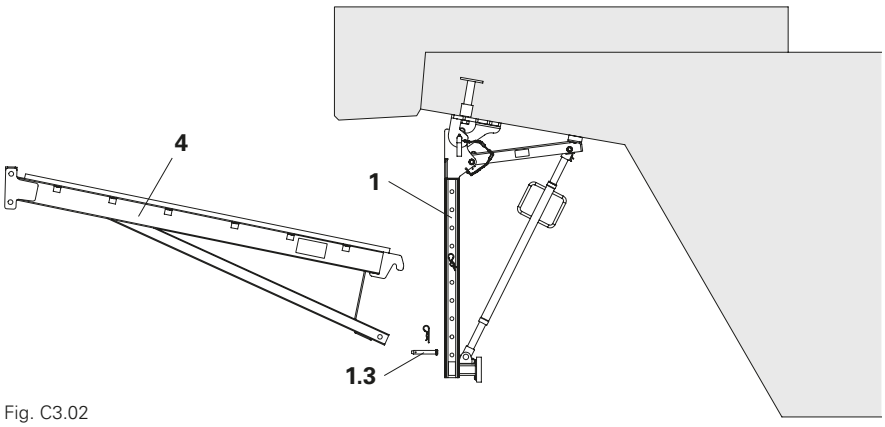

Fig. C3.02

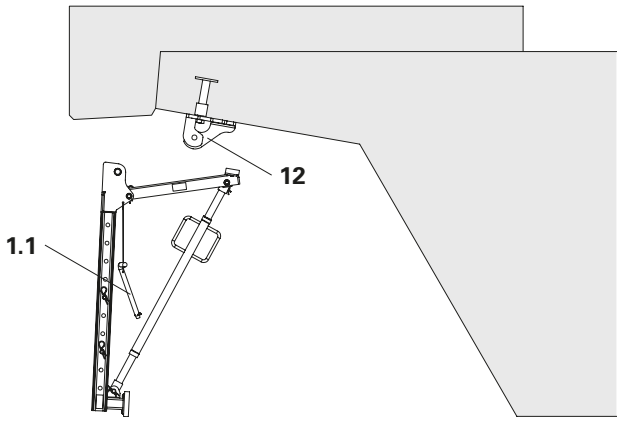

Fig. C3.03

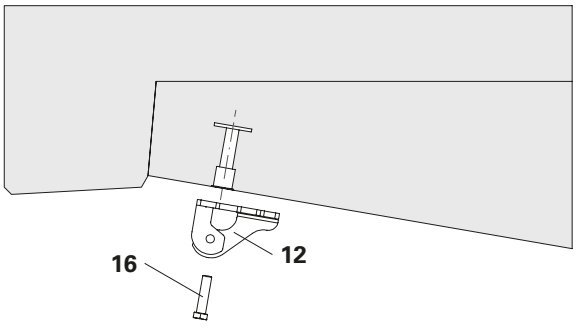

Fig. C3.04

On the abutment

Danger

Leading edges are present during assembly!
There is a risk of falling off the cantilevered parapet.

⇒ Dismantle platform unit and platform unit from a safe and secure working area, e.g.:
- Telescopic work platform.
- Temporary working scaffold.
- Personal protective equipment to prevent falling from a height (PPE).

Dismantling the cantilevered parapet bracket takes place in the same way as on the cantilever.

- Dismantle and remove the formwork unit. (Fig. C3.05)
- Dismantle and remove the platform unit. (Fig. C3.06)
- Dismantle and remove the bracket unit. (Fig. C3.07)
- Loosen Screw ISO 4014-M24x 070-10.9 (**23**) and remove Suspension Head VGK (**12**).
- Remove the ties and seal the tie holes, e.g. with concrete cones, see Section "A5 Anchoring" on page 38. (Fig. C3.08)

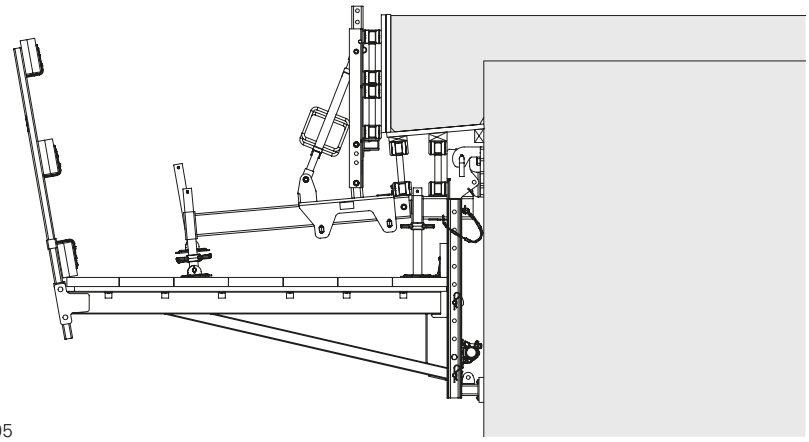

Fig. C3.05

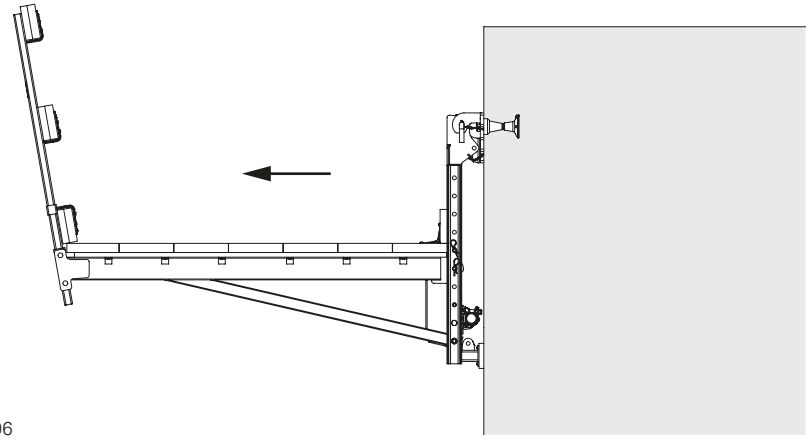

Fig. C3.06

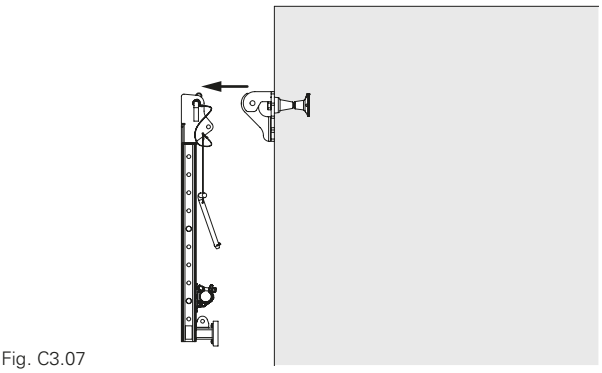

Fig. C3.07

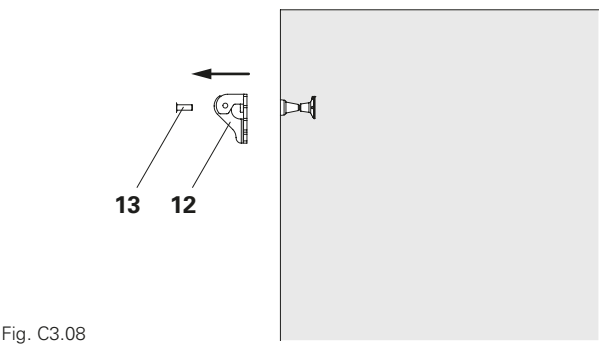

Fig. C3.08

Guardrail Post GKB

Danger
Unsecured concrete edge!
A fall can result in serious injuries or even death
Risk of falling.
⇒ Assembly and dismantling should take place from a safe and secure working area, e.g. lifting platform, or
⇒ Use PPE.

- All loads that arise must be safely transferred.
- Reinforcement stirrups must have sufficient load-bearing capacity.

The Guardrail Post GKB is to be used in accordance with EN 13374 for temporary fall protection on bridge edges. Create side protection railings according to Tab. C4.01 or Tab. C4.02.

Two fastening variants are available:

Variant 1
The Guardrail Post GKB is clamped in the reinforcement stirrup.
(Fig. C4.01)

Required components

25 Guardrail Post GKB	1x
33 Guardrail boards	3x

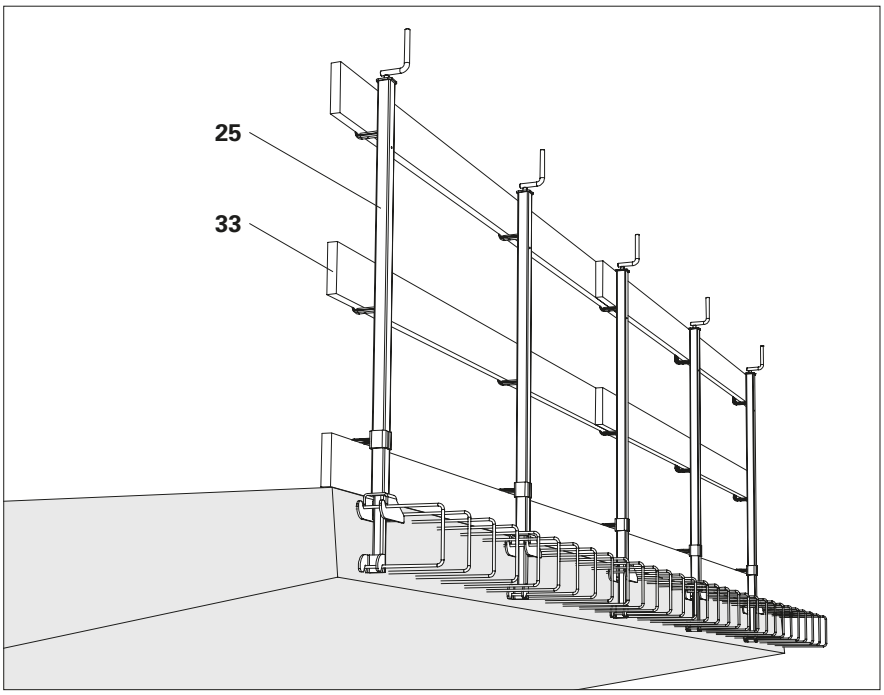

Fig. C4.01

Permissible influence width for the guardrail posts

Handrail board h/b [cm]	Perm. width of influence* [m]
12/4	1.60
15/3	1.55

* Values are valid only in compliance with the boundary conditions in Tab. C4.02 and Fig. C4.03

Tab. C4.01

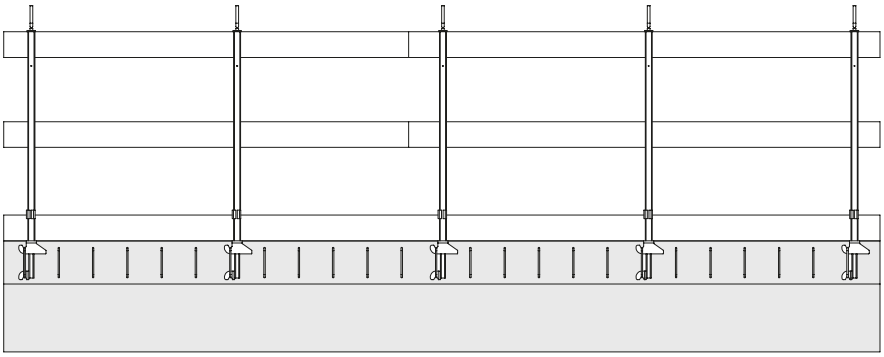

Fig. C4.01a

C4 Guardrail at the edge of the bridge

Assembly

1. Pre-adjust Guardrail Post GKB (**25**) with the crank.
2. Place the Guardrail Post GKB (**25**) in the reinforcement stirrup and tension with the crank.
3. Position guardrail boards (**33**) and secure, e.g. by means of wire pins or wood screws.
   (Fig. C4.02 + Fig. C4.03)

Disassembly

1. Turn crank until the lower holder is free and the guardrail post can be removed from the top reinforcement.

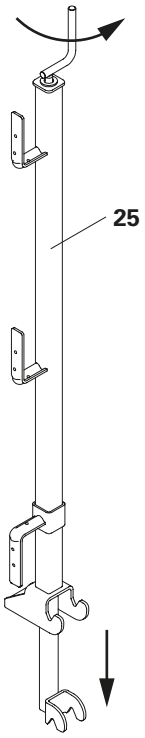

Fig. C4.02

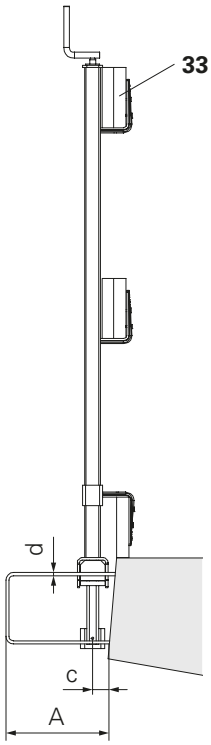

Fig. C4.03

Boundary conditions	
Tightening torque with the crank	≥60 Nm
Reinforcement stirrup spacing A	≥15 cm
Reinforcement stirrup diameter d	≥12 mm
Distance between axis/guardrail post and front concrete side c	≤6 cm

Tab. C4.02

C4 Guardrail at the edge of the bridge

Variant 2
The Guardrail Post GKB is fixed to the parapet/bridge.
(Fig. C4.04b)

Required components

25	Guardrail Post GKB	1x
42	Screw-On Sleeve M16/164	1x
43	Screw ISO 4017-M16x120-8.8-ga	1x
44	Washer ISO 7094-16-100HV-ga	1x

- For installation of the Screw-On Sleeve M16/164 (**42**), see data sheet. (Fig. C4.06)
- Tighten Screw ISO 4017-M16x 120-8.8 (**43**) together with Washer ISO 7094-16-100HV-ga. (**44**) and preload slightly. (Fig. C4.04 – Fig. C4.05)

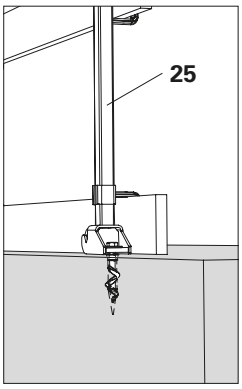

Fig. C4.04a

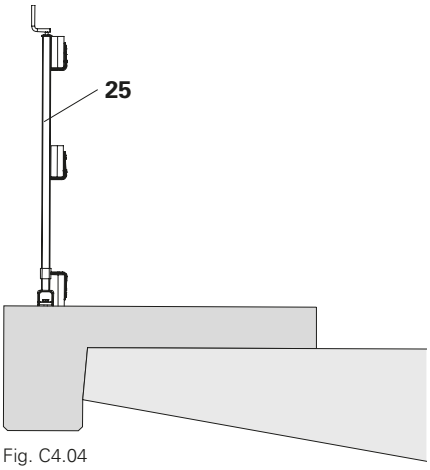

Fig. C4.04

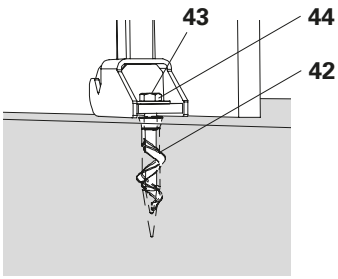

Fig. C4.04b

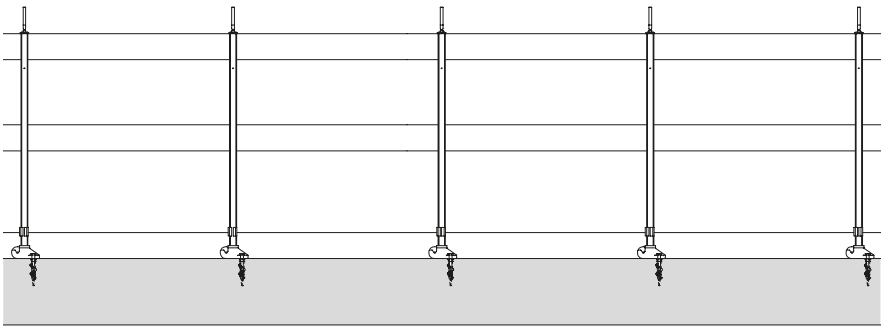

Fig. C4.05

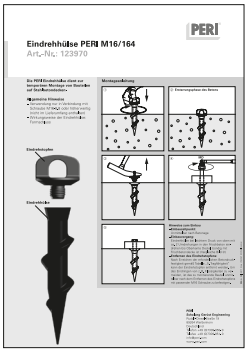

Fig. C4.06

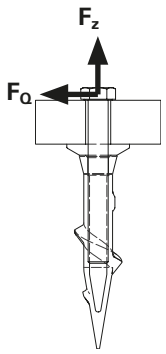
Permissible width of influence for the guardrail posts when using the Screw-On Sleeve

- The forces shown in the table can be linearly reduced or increased when using other anchoring methods with smaller or larger influence widths.
- The permissible influence width in variant 2 is limited:
  - Handrail board h/b = 12 cm/4 cm: perm. influence width = 1.50 m
  - Handrail board h/b = 15 cm/3 cm: perm. influence width = 1.20 m
- For handrail boards that extend across only 2 bays, the permissible influence width of the guardrail post is to be divided by 1.25.
- Safe transfer of existing forces into the building must be guaranteed.
- Take into account the manufacturer's information on the selected anchoring.



Guardrail boards h/b [cm]	permissible post spacing [m]	Tensile force F_Z on anchoring [kN]	Shear force F_Q on anchoring [kN]
12/4	1.20	9.89	0.53
15/3	0.95	9.74	0.53

Tab. C4.03

Danger

The platform cannot take any concreting loads!
The platform could fall down and this could result in serious injuries or even death.
⇒ Do not use the platform as a formwork suspension.
⇒ Mount the formwork on the wall, e.g. with wall formwork bracket MX WK (**66**).
⇒ Only place the standing scaffold on Work Platform VGK 160.
(Fig. D1.02 + Fig. D1.02a)

- Permissible spindle loads on the deck:
  – V1 = 3.40 kN
  – V2 = 1.90 kN

(Fig. D1.02)

- For the deck, use a multi-layer plywood sheet with a min. thickness of 39 mm thickness as per DIN EN 14374:2005-02.
- The base spindles are at a distance of at least 20 cm from the wall-side corners of the decking panels. If this is not the case, fit additional distribution panels with minimum dimensions of 250 x 250 x 39 mm under the base spindles.
  – If the base spindle is resting on two decking panels, it can also be placed in the edge area.

(Fig. D1.01)

- Other deck designs or higher spindle loads require planning, a separate structural verification of the VGK system and a risk assessment.

Conditions for the standing scaffold:

- The standing scaffold must comply with DIN EN 12811-1:2004-03.
- The max. width of the standing scaffold is 1.25 m. Due to the reduced footprint, the standing scaffold is not consistent with a standard application. For this reason, separate structural verification was carried out for a max. platform height of 2.5 m. For platform heights above 2.5 m, the standing scaffold must be kept horizontal.
- The maximum decking width of the standing scaffold is 0.75 m.
- Permissible load of the standing scaffold according to load class 3 (DIN EN 12811-1:2004-03): Load assumption: 200 kg/m² on the upper scaffolding level and 100 kg/m² on the lower scaffolding level.
- The reinforcement scaffold meets the requirements of wind loads according to DIN EN 1004-1:2021-02 and DIN EN 12811-1:2004-03:
  – for free-standing scaffold: q = 0.1 kN/m² (v = 12.7 m/s)
  – for scaffolds with a pressure brace against the formwork: q = 0.2 kN/m² (v = 17.9 m/s)
- Dismantle the scaffold before higher anticipated wind forces or at the end of work operations, or fasten it to the supported and appropriately anchored formwork in such a way that it is tension- and compression-proof.
- Secure scaffold areas projecting over the formwork separately.
- Covering with tarpaulins or nets is not permitted.
- The weight of the standing scaffold used must not deviate significantly from the adopted PERI UP Flex scaffolding system.

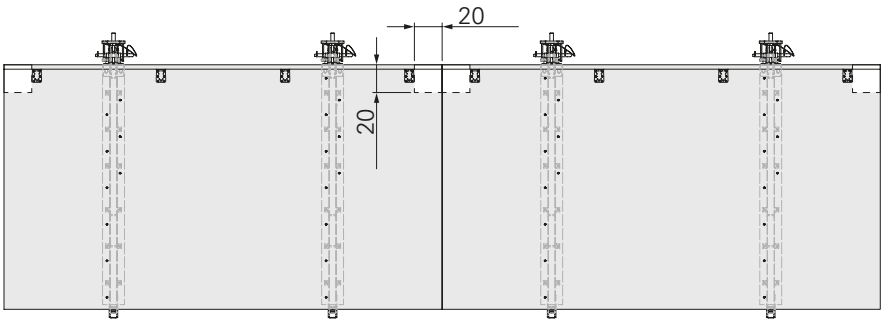


Fig. D1.01

Base spindle footprint
Grey area:
- Permissible footprint

White area:
- Impermissible footprint

If the base spindle is resting on two decking panels, it can also be placed in the white area.

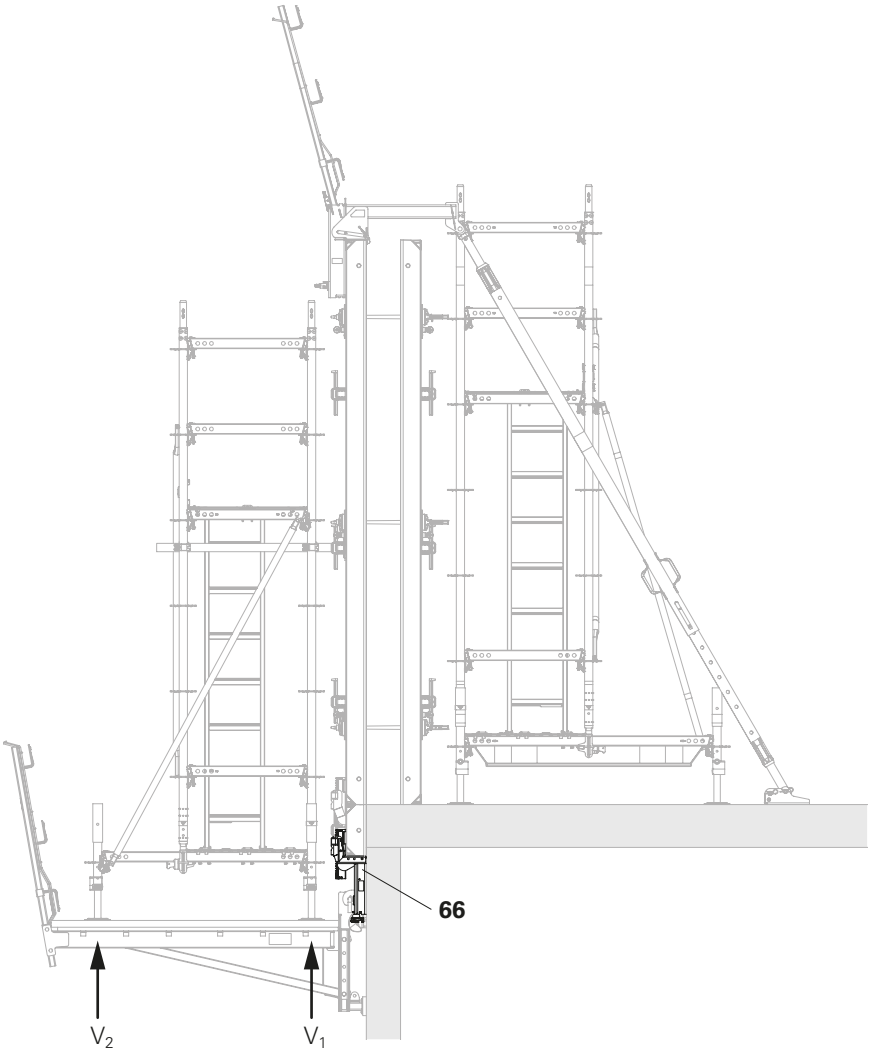

Fig. D1.02

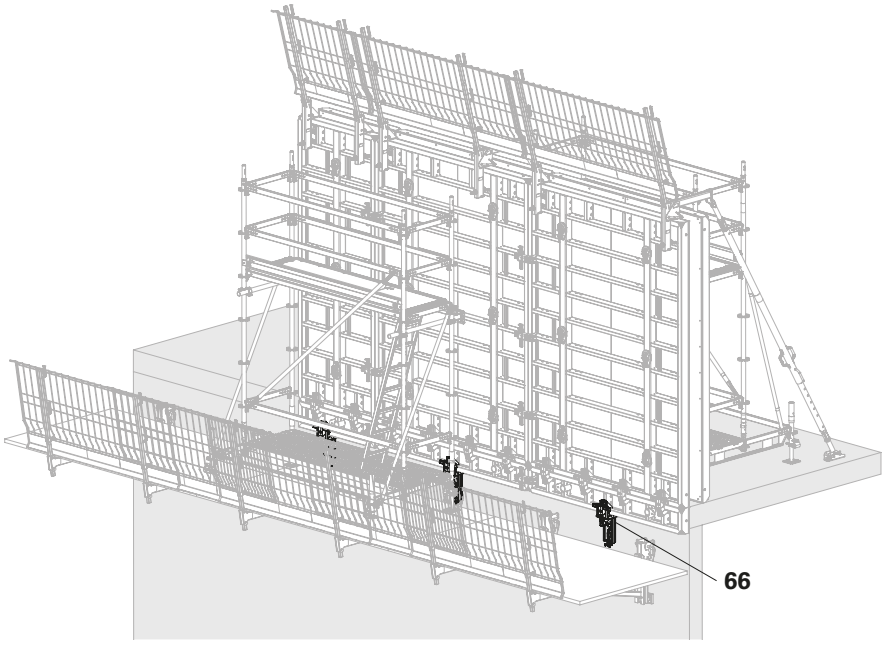

Fig. D1.02a

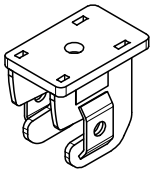
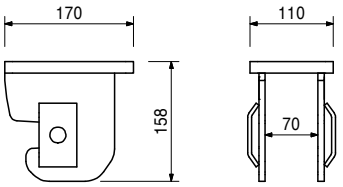
Art no.	Weight [kg]	
124413	4.400	**Suspension Head VGK**

To attach the Bracket Post VGK 070/110/139 to the structure.



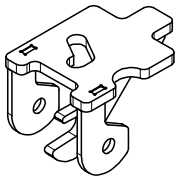


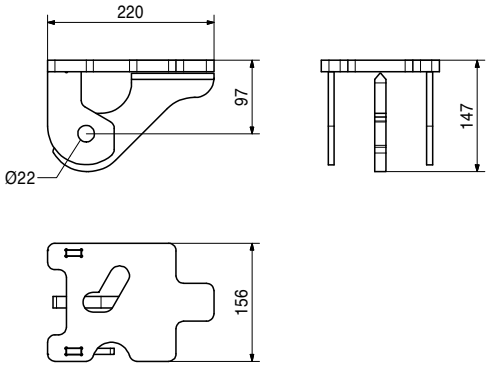
Art no.	Weight [kg]	
138071	4.900	**Suspension Head VGK Flex**

To attach the Bracket Post VGK 70/110/139 also in form of pre-assembled platforms to the structure.

Notes

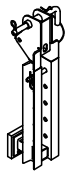
Not suitable for the Bracket Post VGK 70 in conjunction with Formwork Girder VGK 60 at the abutment.

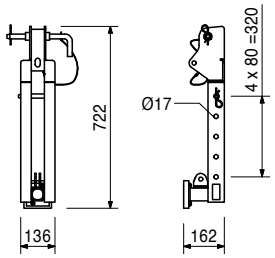




Art no.	Weight [kg]	
134161	11.900	**Bracket Post VGK 70**

For connection of Platform Cantilever Beam VGK 170 and formwork with parapet height up to 60cm and low clearance profile.



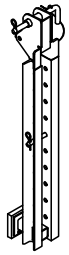


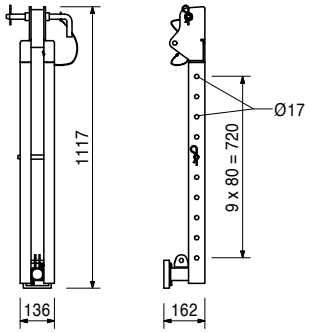
Included in delivery

1 pc 118463 Pin Ø16x90mm coat
1 pc 113012 Locking Pin Ø20x260mm coat
2 pc 018060 Cotter Pin 4/1 ga

Art no.	Weight [kg]	
124404	17.300	**Bracket Post VGK 110**

For connection of the Platform Cantilever Beam VGK 170 and formwork with parapet height up to 60cm.



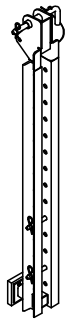


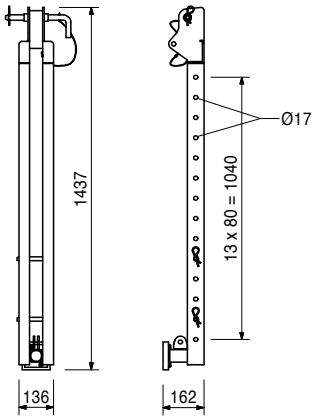
Included in delivery

1 pc 118463 Pin Ø16x90mm coat
1 pc 113012 Locking Pin Ø20x260mm coat
2 pc 018060 Cotter Pin 4/1 ga

Art no.	Weight [kg]	
124427	22.000	**Bracket Post VGK 139**

For connection of the Platform Cantilever Beam VGK 170 and formwork with parapet heights from 60cm to 100cm.





Included in delivery

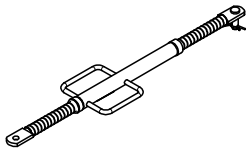
2 pc 118463 Pin Ø16x90mm coat
1 pc 113012 Locking Pin Ø20x260mm coat
3 pc 018060 Cotter Pin 4/1 ga

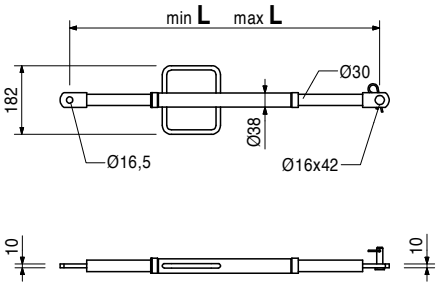
Art no.	Weight [kg]		min. L [mm]	max. L [mm]
		Kickers AV		
057087	3.510	**Kicker AV 82**	500	820
057088	4.200	**Kicker AV 111**	790	1110

For aligning PERI Formwork Systems.

Notes

Permissible load see PERI Design Tables.





Included in delivery

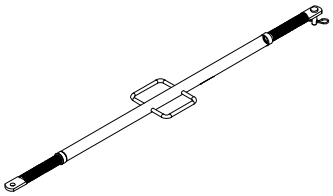
1 pc 027170 Pin Ø16x42mm ga
1 pc 018060 Cotter Pin 4/1 ga

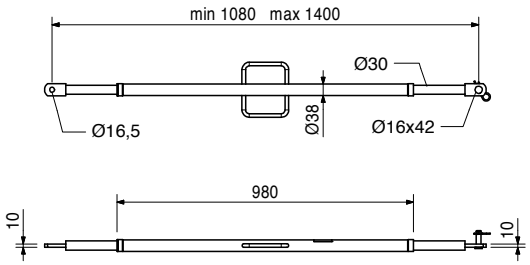
Art no.	Weight [kg]		D [mm]	L [mm]	min. L [mm]	max. L [mm]
028110	4.850	**Kicker AV 140**	2000	250	1080	1400

For aligning PERI Formwork Systems.

Notes

Permissible load see PERI Design Tables.



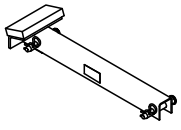


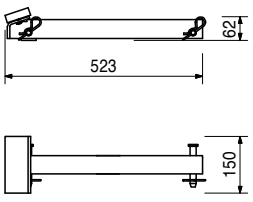
Included in delivery

1 pc 027170 Pin Ø16x42mm ga
1 pc 018060 Cotter Pin 4/1 ga

Art no.	Weight [kg]	
124455	3.050	**Bracket Cantilever VGK 50**

For assembly of the bracket unit with Bracket Post VGK 70/110/139 and Kicker AV 82/111/140.



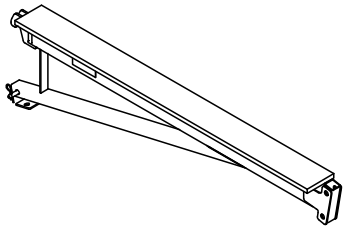


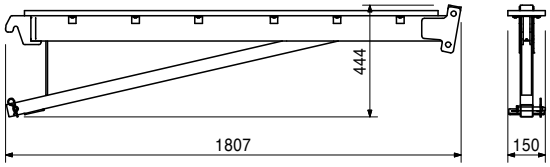
Included in delivery

2 pc 118463 Pin Ø16x90mm coat
2 pc 018060 Cotter Pin 4/1 ga

Art no.	Weight [kg]	
124447	21.100	**Platform Cantil. Beam VGK 170**

For connection to the Bracket Post VGK 70/110/139 and installation of a fully closed platform planking.



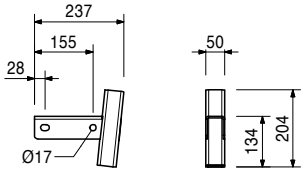


Included in delivery

1 pc 118463 Pin Ø16x90mm coat
1 pc 018060 Cotter Pin 4/1 ga

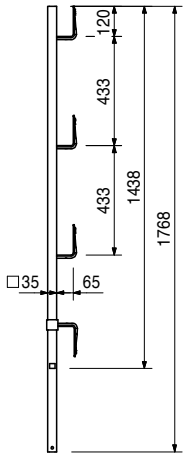
Art no.	Weight [kg]	
138056	1.900	**Guardrail Holder VGK**

For assembling a guardrail to the formwork posts VGK 70 and 120



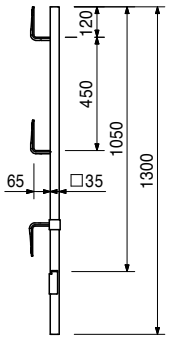
Art no.	Weight [kg]	
061260	6.150	**Guardrail Post SGP**

As guardrail for different systems.



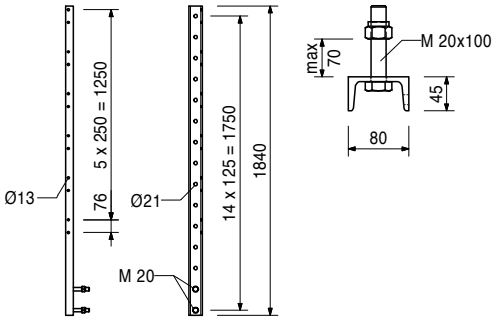
Art no.	Weight [kg]	
116292	4.720	**Guardrail Post-2 HSGP**

As guardrail for different systems.



Art no.	Weight [kg]	
114328	16.600	**Guardrail Post RCS/SRU 184**

For assembly of the guardrail on the Platform Beam RCS/SRU or Guardrail Post Holder Multi.



Accessory (not included)

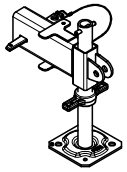
110296	Clamp A64 DIN3570-M12-ga
710330	Hex-Nut ISO4032-M12-8-ga
710709	Screw DIN603-M08-065-4.8-ga-Nut
780354	Washer ISO7089-08-200HV-ga
057345	Washer 9mm DIN 434 ga

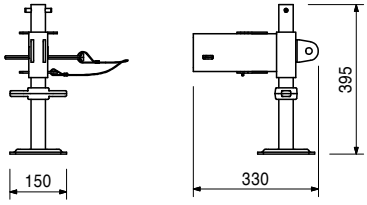
Included in delivery

2 pc 114727 Screw ISO4017-M20x100-8-8-ga
2 pc 781053 Hex-Nut ISO7040-M20-8-ga

Art no.	Weight [kg]	
124394	6.640	**Formwork Fixing-2 VGK**

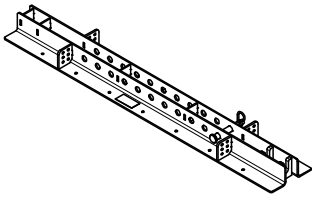
For connection of the Formwork Support VGK 100 to the Bracket Post VGK 110/139.

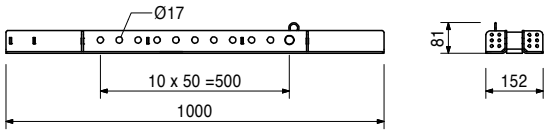




Art no.	Weight [kg]	
134169	7.650	**Formwork Support VGK 60**

For connection of bottom and lateral formwork in combination with Bracket Post VGK 70.



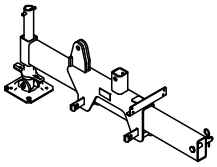


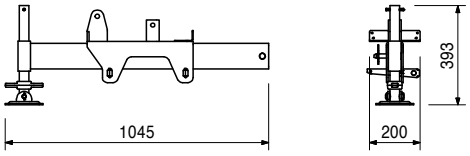
Included in delivery

1 pc 118463 Pin Ø16x90mm coat
1 pc 018060 Cotter Pin 4/1 ga

Art no.	Weight [kg]	
124438	20.100	**Formwork Support VGK 100**

For connection of the bottom and lateral formwork.



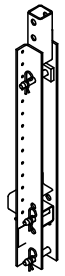


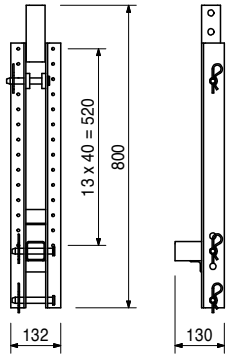
Included in delivery

1 pc 118463 Pin Ø16x90mm coat
1 pc 018060 Cotter Pin 4/1 ga

Art no.	Weight [kg]	
124371	7.300	**Formwork Post VGK 70**

For mounting of the lateral formwork.



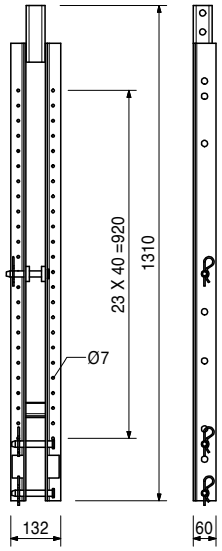


Included in delivery

1 pc 124364 Girder Support coat
3 pc 118463 Pin Ø16x90mm coat
3 pc 018060 Cotter Pin 4/1 ga

Art no.	Weight [kg]	
138061	10.200	**Formwork Post VGK 120**

For mounting of the lateral formwork for parapets from 60cm-100cm and a platform beam in application of the light working platform



Accessory (not included)

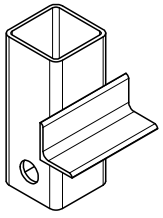
124364	Girder Support coat
118463	Pin Ø16x90mm coat
018060	Cotter Pin 4/1 ga

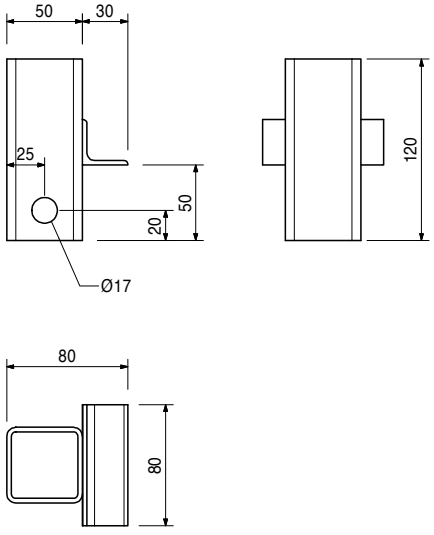
Included in delivery

3 pc 118463 Pin Ø16x90mm coat
3 pc 018060 Cotter Pin 4/1 ga

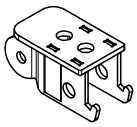
Art no.	Weight [kg]	
124364	0.608	**Girder Support coat**

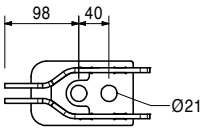
Can be assembled on VGK 120 Formwork Support. Serves as support for formwork beams.

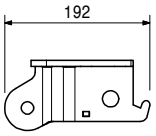


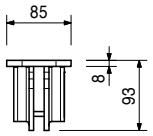


Art no.	Weight [kg]		B [mm]	L [mm]
138455	1.840	**Bracing Shoe VGK**	85	192









Accessory (not included)

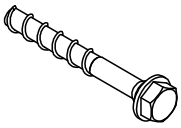
124777 Anchor Bolt Ø14/20x130mm

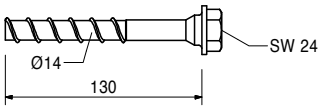
Art no.	Weight [kg]	
124777	0.210	**Anchor Bolt SW24 Ø14/20x130 TG**

For temporary attachment to reinforced concrete components.

Notes

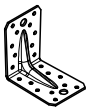
Take the PERI Data Sheet into consideration!
Hole Ø14mm.

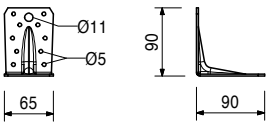




Art no.	Weight [kg]	
123478	0.255	**Angle Connector 90x90x65mm**

For diverse timber connections.



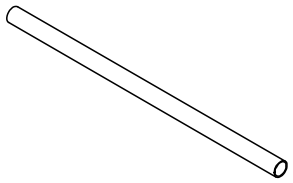


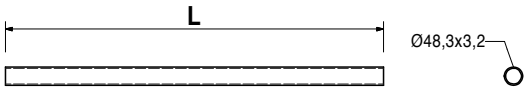
Accessory (not included)

129711 Wood Screw 6x20 HRK-TX30 HSX

024550 Wood-Screw 8x20 SK-TX30 HSX

Art no.	Weight [kg]		L [mm]
		Scaff. Tubes 48.3x3.2mm	
026415	3.550	**Scaff. Tube 48.3x3.2mm lfm ga**	1000
026411	3.550	**Scaff. Tube 48.3x3.2mm 1m ga**	1000
026412	7.100	**Scaff. Tube 48.3x3.2mm 2m ga**	2000
026413	10.650	**Scaff. Tube 48.3x3.2mm 3m ga**	3000
026414	14.200	**Scaff. Tube 48.3x3.2mm 4m ga**	4000
026419	17.750	**Scaff. Tube 48.3x3.2mm 5m ga**	5000
026418	21.600	**Scaff. Tube 48.3x3.2mm 6m ga**	6000
026417	0.000	**Cutting Costs Scaffold Tube**	1



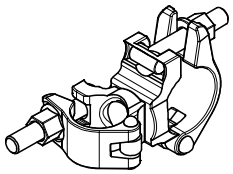


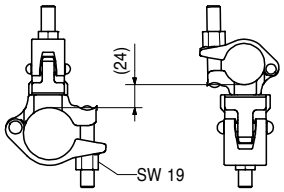
Art no.	Weight [kg]	
102400	1.100	**Swiv.Coup. EN74 RS Ø38/48mm ga**

For scaffold tubes Ø48mm and Ø38mm.

Notes

Coupling category: not categorized.



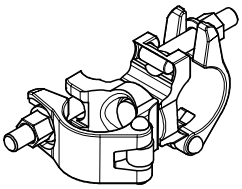


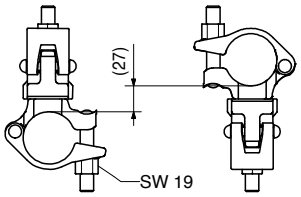
Art no.	Weight [kg]	
017010	1.400	**Swivel Coupler SW Ø48/48mm ga**

For Scaffold Tubes Ø48mm.

Notes

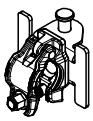
Coupling category: B.

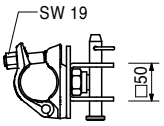




Art no.	Weight [kg]	
124934	1.750	**Bracing Connector VGK**

For bracing due to longitudinal inclination.



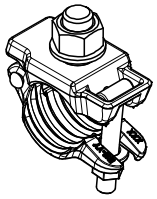


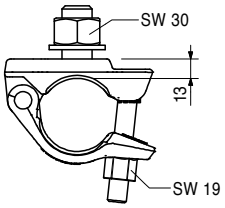
Included in delivery

1 pc 710222 Screw ISO4014-M16x080-8.8-ga
1 pc 710229 Hex-Nut ISO4032-M16-8-ga

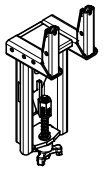
Art no.	Weight [kg]	
131404	1.080	**Screw-On Cou.-2 HT B Ø48mm M20**

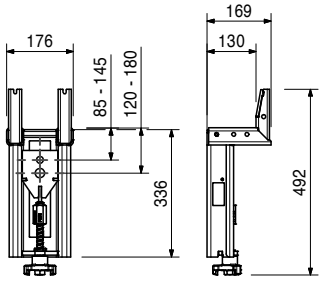
For Screwing Scaffold Tubes Ø48 mm to components up to 9mm thickness.





Art no.	Weight [kg]	
135327	9.570	**Wall Formwork Bracket MX WK**

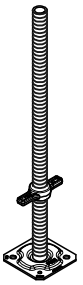


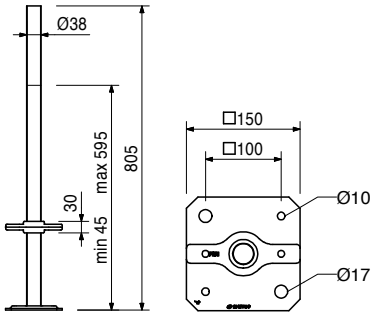


Art no.	Weight [kg]	
100242	4.570	**Adj. Base Plate UJB 38-80/55**

Notes

With captive yellow quick jack nut.



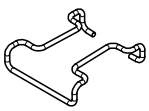


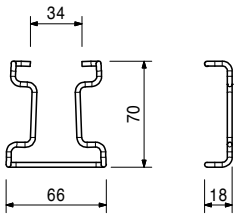
Accessory (not included)

100863 Handle Locking UJS

Art no.	Weight [kg]	
134174	0.019	**Anchor Lock VGK B15**

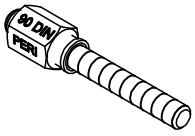
For securing the B15 anchor VGK against loosening due to vibration.

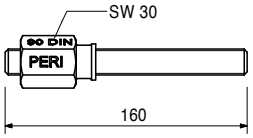




Art no.	Weight [kg]	
134173	0.478	**Anchor VGK B15**

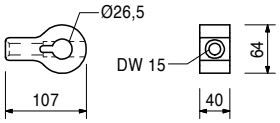
To attach VGK Cantilevered Parapet Bracket to the Anchor System in accordance with General Building Approoal No. Z-21.6-1764 with installation length hnom = 125mm.





Art no.	Weight [kg]	
115378	1.080	**Eye Nut RCS DW15**

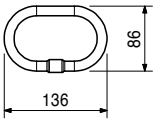
As an articulated connection to the Climbing Rail RCS, Steel Waler SRU for bracing with DW15.



Accessory (not included)

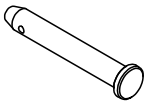
104031	Filler Pin Ø21x120mm
018060	Cotter Pin 4/1 ga
111567	Filler Pin Ø26x120mm
022230	Cotter Pin 5/1 ga

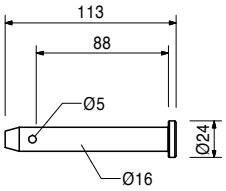
Art no.	Weight [kg]	
710671	0.345	**Suspension Link A13**



Art no.	Weight [kg]	
118463	0.181	**Pin Ø16x90mm coat**

For different connections. High strength.





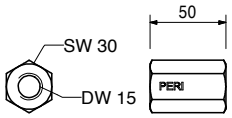
Art no.	Weight [kg]	
018060	0.014	**Cotter Pin 4/1 ga**

Art no.	Weight [kg]	
030070	0.222	**Hex-Nut DW15 SW30 50mm ga**

For anchoring with Tie Rod DW15 and B15.

Notes

Weldable!

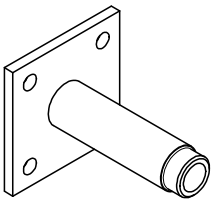


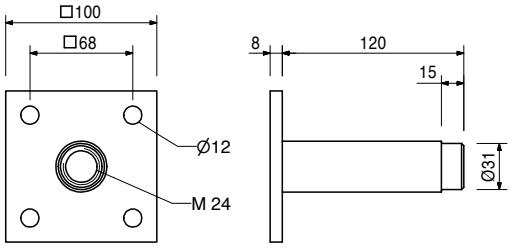
Art no.	Weight [kg]	
026230	1.010	**Anchor Sleeve M24**

For anchoring of platform systems.

Notes

Separate design information on request.



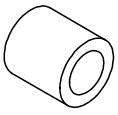


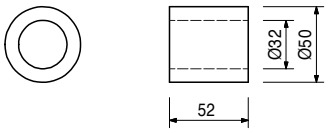
Accessory (not included)

026240	Cone PP Ø31/26mm C=25mm
026250	Plug PP Ø26
116233	Cone FRC Ø32/52mm C=40
026420	Anchor Posit. Stud M24 ga
116234	Concrete Plug Ø32mm
115150	Anchor Position. M24x65mm ga
123800	Threaded Cone M24/40mm

Art no.	Weight [kg]	
116233	0.116	**Cone FRC Ø32/52mm C=40**

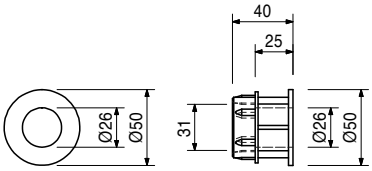
Results in concrete cover of 40mm in combination with Tie Sleeve M24. Made of fibre-reinforced concrete.





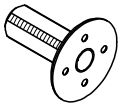
Art no.	Weight [kg]	
026240	0.026	**Cone PP Ø31/26mm C=25mm**

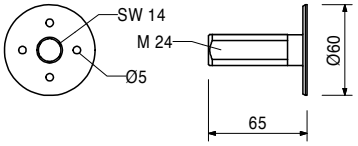
Results in concrete cover of 25mm in combination with Tie Sleeve M24. Made of polypropylene.



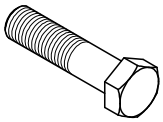
Art no.	Weight [kg]	
115150	0.200	**Anchor Position. M24x65mm ga**

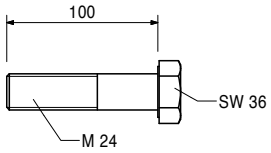
For fixing the Anchor Sleeve M24 if fixation through formlining is not possible.





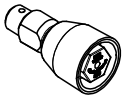
Art no.	Weight [kg]	
124031	0.452	**Screw ISO4014-M24x100-8.8-ga**

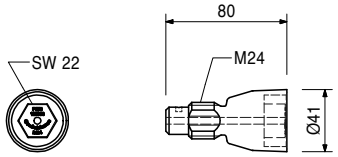




Art no.	Weight [kg]	
123800	0.045	**Threaded Cone M24/40mm**

For pre-fixing of Anchor Sleeve M24 with a concrete cover of 40mm in bridge cantilevers

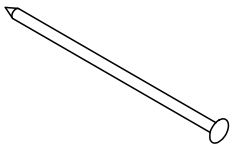


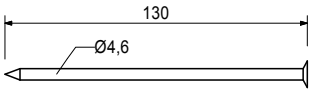


Accessory (not included)

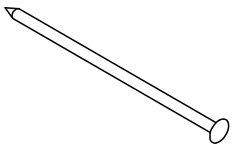
026230	Anchor Sleeve M24
123820	Concrete Plug Ø40mm
129157	Wire Nail 4.6x130mm

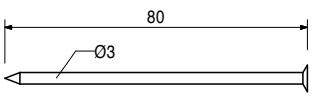
Art no.	Weight [kg]	
129157	0.017	**Wire Nail 4.6x130mm**





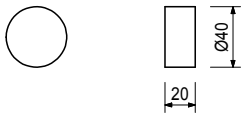
Art no.	Weight [kg]	
710312	0.005	**Wire Nail 3.0x80mm**





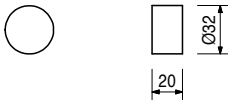
Art no.	Weight [kg]	
123820	0.063	**Concrete Plug Ø40mm**

For closing the tie hole when using Threaded Cone M24.



Art no.	Weight [kg]	
116234	0.033	**Concrete Plug Ø32mm**

For closing the FRC Tube Ø32mm. Made of fibre-reinforced concrete.



Art no.	Weight [kg]	
031550	1.000	**Repoxal Glue**

Two-component adhesive for bonding fibre reinforced concrete plugs. Requirements: 1kg adhesive for approx. 200 Plugs FZR 32 or 330 Plugs FZR 22.

Notes

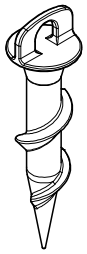
See Safety Data sheet!
Delivery unit 1kg.

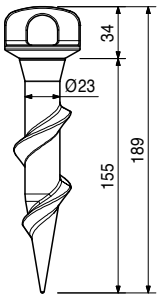
Art no.	Weight [kg]	
123970	0.047	**Screw-on Sleeve M16/164**

For temporary mounting of components on reinforced concrete slabs.

Notes

Inserted into the fresh concrete immediately after concreting.



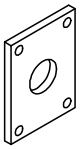


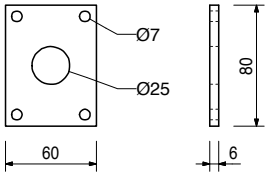
Accessory (not included)

123973 Screw ISO4017-M16x130-8.8-ga

Art no.	Weight [kg]	
029280	0.196	**Anchor Posit. Plate M24 ga**

For fixing the Anchor System M24 if the plywood formlining has been drilled through.



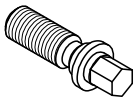


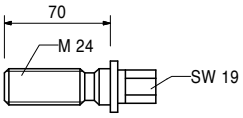
Accessory (not included)

029440 Hex-Wood-Screw 6x20 DIN571-ga

Art no.	Weight [kg]	
029270	0.331	**Advancing Screw M24 ga**

For fixing the Anchor System M24 if the plywood formlining has been drilled through.

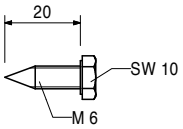




Accessory (not included)

029280 Anchor Posit. Plate M24 ga

Art no.	Weight [kg]		L [mm]
029440	0.005	**Hex-Wood Screw DIN571-6x20-ga**	20

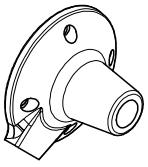


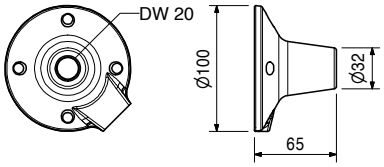
Art no.	Weight [kg]	
030860	0.792	**Threaded Anchor Plate DW20**

For use with Tie Rod DW20, B20 or Screw-On Cone-2 M24/DW20. For anchoring in concrete.

Notes

Lost anchor part.



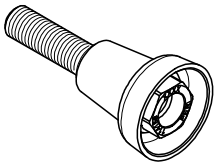


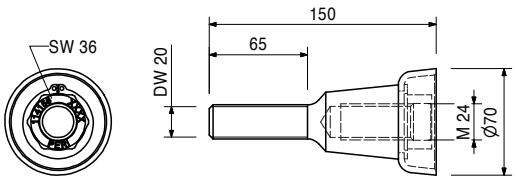
Art no.	Weight [kg]	
114158	1.030	**Screw-On Cone-2 DW20 M24 ga**

Anchor System M24. For anchoring climbing systems.

Notes

Seperate design information on request.





Accessory (not included)

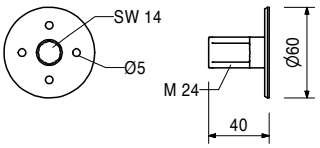
030860 Threaded Anchor Plate DW20

Art no.	Weight [kg]	
026420	0.123	**Anchor Posit. Stud M24 ga**

For fixing Anchor System M24 if the plywood formlining is not to be drilled through.

Notes

Allen Key SW14.



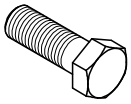
Accessory (not included)

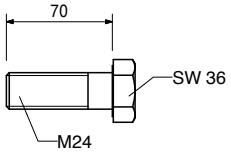
027212 Hexag. Recess Wrench SW14 long

710312 Wire Nail 3.0x80mm

Art no.	Weight [kg]		L [mm]
026430	0.334	**Screw ISO4014-M24x70-10.9**	70

High-strength bolt for anchoring climbing systems.



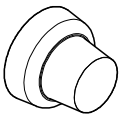


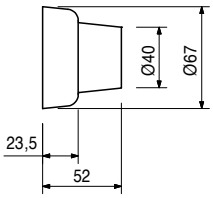
Art no.	Weight [kg]	
031652	0.247	**Concrete Cone KK M24 Ø67x52mm**

For closing anchor points with Climbing Cone-2, M24/DW15 and Screw-On Cone-2 M24/DW20.

Notes

Delivery unit 50 pieces.





Accessory (not included)

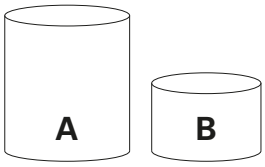
131709 Sealing Adhesive-3 6 Cans-Set

Art no.	Weight [kg]	
131709	9.980	**Sealing Adhesive-3 6-Cans-Set**

For bonding PERI Concrete Cones.

Notes

See Safety Data sheet!
Consisting of: 6 x Component A, 6 x Component B
Component A = Net quantity / Can 459ml / 752g
Component B = Net quantity / Can 356ml / 583g

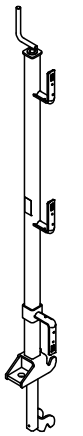


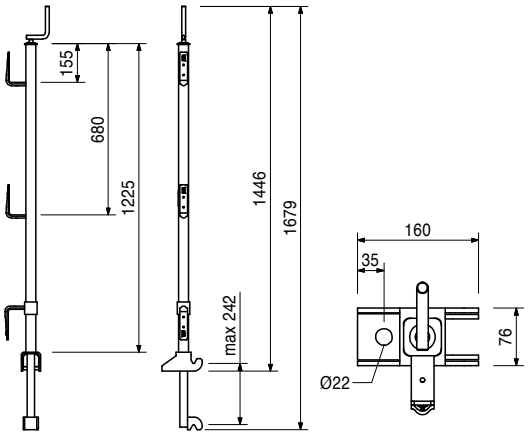
Included in delivery

6 pc 131710 Sealing Adhesive-3 Can CO-A
6 pc 131711 Sealing Adhesive-3 Can CO-B

Art no.	Weight [kg]	
114299	9.520	**Guardrail Post GKB**

For fixing to the reinforcement or to the embedded anchors.



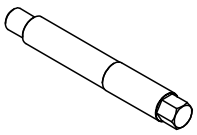


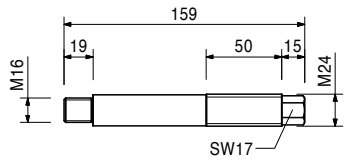
Art no.	Weight [kg]	
130012	0.337	**Conn. Bolt SW17 M16/M24x50mm**

Refurbishment anchor for subsequent attachment of Suspension Head VGK to existing bridge structures.

Notes

Separate design information on request.



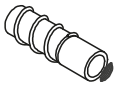


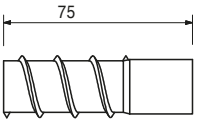
Art no.	Weight [kg]	
129637	0.195	**ITH-Sleeve TSM BC 22x75mm IM16**

Internal threaded sleeve for connection Bolt M16/M24x50.

Notes

Separate design information on request.





Art no.	Weight [kg]	
129628	0.555	**Composite Mortar CF-T 300 V**

Consumption: approx. 15 anchors / 410ml.

Accessory (not included)

130013 Mixer CF-T 300 V

Art no.	Weight [kg]	
130013	0.010	**Mixer CF-T 300 V**

Art no.	Weight [kg]
