Forstner drill Ø 42 mm
Wood drill Ø 13 mm

Tightening torques

For the bolt connections, PERI recommends the following "hand-tightened" tightening torque $M_{A,hand-tightened}$ according to Eurocode 3 and DIN EN 1090-2:

Bolt	M20	M24	M30	M36
$M_{A,hand-tightened}$ [Nm]	60	110	220	350

Tightening torques have been determined for the following components:

Clamping Screw for Screen Adapter	80 Nm
Nut for Screen Adapter	80 Nm
Climbing Bolt for Spacer	60 Nm
Turnbuckle, oiled	Hand-tightened
Turnbuckle, dry	Hand-tightened + 1 complete turn (360°)

Standard configuration and variants

 Tip

 Incorrect use

Arrows

 Arrow representing an action

 Arrow representing a reaction of an action*

 Arrow representing forces

* If not identical to the action arrow.

Safety instruction categories

The safety instructions alert site personnel to the risks involved and provide information on how to avoid these risks. Safety instructions are featured at the beginning of the section or ahead of the instructions, and are highlighted as follows:

Danger

This sign indicates an extremely hazardous situation which, if not avoided, will result in death or serious, irreversible injury.

Warning

This sign indicates a hazardous situation which, if not avoided, could result in death or serious, irreversible injury.

Caution

This sign indicates a hazardous situation which, if not avoided, could result in minor or moderate injury.

Note

This sign indicates situations in which failure to observe the information can result in material damage.

Format of the safety instructions

Signal word

Type and source of hazard!
Consequences of non-compliance.
⇒ Preventative measures.

Dimensions

Dimensions are usually given in mm. Other measurement units, e.g. m, are shown in the illustrations.

Conventions

- Instructions are numbered with: 1., 2., 3.
- The result of an instruction is shown by: →
- Position numbers are clearly provided for the individual components and are given in the drawing, e.g. **1**, in the text in brackets, for example **(1)**.
- Multiple position numbers, i.e. alternative components, are represented with a slash: e.g. **1/2**.

Notes on illustrations

The illustration on the front cover of these instructions is understood to be a system representation only. The assembly steps presented in these Instructions for Assembly and Use are shown in the form of examples with only 1 component size. They are valid for all component sizes contained in the standard configuration.

To facilitate understanding, detailed illustrations are sometimes incomplete. The safety installations which have possibly not been shown in these detailed illustrations must nevertheless be available.

Anchoring

Climbing Anchor and Bracket Anchor

The Climbing Anchor consists of:

- Climbing Cone,
- Tie Rod and
- Threaded Anchor Plate.

(Fig. 02)

The Bracket Anchor is the Mounting Ring SCS M30.

(Fig. 03)

There are 3 sizes of Mounting Ring:

- M24
- M30
- M36

The size to be used depends on the load according to the static calculations.

- $c_2 = 350$ mm Standard spacing to the concrete joint if not specified in the plan. (Fig. 03)
- The load-bearing capacity is reduced when using Tie Rod B 20 with a continuous thread, see separate SCS dimensioning information.
- The standard configuration shown in these Instructions for Assembly and Use is M30 anchoring.

Components for M30 anchoring

- 70** Climbing Cone-2 M30/DW20
- 71** Tie Rod DW 20*
- 72** Tie Rod B 20*
- 73** Threaded Anchor Plate DW 20*
- 81** Mounting Ring SCS M30

* non-reusable components

Tools

Ratchet Wrench 1"
with Wrench Socket SW 46-1*.

Fig. 02

Fig. 03

H = height measurement

L_s = length of tie rod

h_{nom} = anchoring depth

c_2 = distance of the anchor to the concrete joint

- Every Bracket SCS must have its own anchoring.
- The anchoring can only be released and removed from the load transfer side.

Check anchor point

All individual components

- Anchor type
- Completeness
- Integrity

Position

- Height
- Alignment
- Distance to edge
- Anchor spacings

Assembly

- Anchoring depth h_{nom}
- Screw-in depths

Concrete

- Sufficient concrete strength
- Cavity-free anchor base

We recommend compiling an acceptance report of the anchor point inspection.

Spray the climbing cone with a release agent before installation.
→ Facilitates removal.

Fig. 04

Climbing cones must be installed using an offset arrangement. The positioning of 2 Climbing Cones against each other is not allowed!
(Fig. 05)

Fig. 05

Operating status

Operational status

- Cleaning of formwork, wall reinforcement, closing and striking of formwork, anchor installation and dismantling, inspection and maintenance.
- Platforms are freely accessible for the work to be carried out.
- Formwork is in the concreting position or retracted on the formwork carriage.
- Loads are evenly distributed. Single-sided loads on cantilevered platform areas are only allowed if an appropriate fixation to prevent lift-off is fitted to the bracket positioned opposite.

When climbed

During the climbing procedure, site personnel are not allowed to remain on the platform.

- Moving the climbing unit with the crane.
- Formwork is:
 - retracted (SCS 250).
 - inclined to the rear (SCS 190).
- Non-intended loads on the platform must be removed.

Concreting status

- Concreting the casting segment.
- Concreting platform is freely accessible for the work to be carried out.
Working platform: only access - no additional loads.
Finishing platform: no access.

Non-operational

- During longer work breaks or storm warnings with wind speeds over 72 km/h.
- Bring formwork in concreting position.
- Accessing the platform during storm conditions is forbidden.
- Materials or equipment can be left on the working platform if appropriately secured.
- Max. resulting wind speed (dynamic wind pressure) for storms depends on the utilisation height, wind zone and terrain category in accordance with EC 1.
- For storm warnings with higher wind speeds than assumed, an authorised person is to be informed and, if necessary, all enclosure netting and tarpaulin removed. The climbing unit can be climbed back to the previous concreting section if instructed to do so. Remove materials and equipment from the platforms.

Overview of live loads

Component/Condition		Perm. live load [kg/m ²]	Operational status and concreting status Working	Storm Non-operational
Concreting platform		150	75 kg/m ²	–
Intermediate platform		150	–	–
Working platform	Wall side	300	300 kg/m ²	–
	Guardrail side	200	200 kg/m ²	133 kg/m ²
Intermediate platform		75	–	–
Finishing platform		75	37.5 kg/m ²	–
Max. wind speed		–	72 km/h	According to specifications
Max. dynamic wind pressure		–	≤ 0.25 kN/m ²	According to specifications
Concrete pressure [kN/m ²]		–	–	–
Position of the formwork		–	Retracted or in the concreting position	In the concreting position

The stability for the loads and conditions must be checked by means of a static calculation in accordance with separate SCS Double-Sided Climbing Formwork dimensioning information!

Load models

Max. perm live loads are differentiated as follows:

- Operational status (Fig. 06)
- Concreting status (Fig. 07)

Shown is the working platform with the Crossbeam Unit SCS 250.

The live loads are also valid for the working platform with the Crossbeam Unit SCS 190.

- The area-related live loads correspond to EN 12811.
- Loads are evenly distributed. One-sided loading of cantilevered platform areas is not permitted.
- Working: if more platforms are loaded, only 1 level can be fully loaded; other platform levels directly above and below only 50%.
- Storm: reduced load on the working platform for materials left behind.

Fig. 06

Fig. 07

Preparation

Assembly work

1. Assemble wall formwork.
2. Mount required platforms, see Section B1.

Concrete the starter

1. Position wall formwork for the first concreting section.
2. Fix the leading anchor, see Section B2.7.
3. Carry out the reinforcement work.
4. Concrete the first section. (Fig. 08)

Carry out preparations for initial use

1. Release the leading anchor, see Section B2.8.
2. Strike the starter formwork.
3. Install mounting ring or mounting bolt, see Section B2.9. (not shown)

Initial use

1. Suspend working platform unit, see Section B2.1.
2. Insert securing pins, see Section B6.2.
3. If necessary: install wind bracing, see Section B2.5.
4. If necessary: clean and align the formwork, see Section B3.
5. Fix strongback to the formwork, see Section B3.1.
6. If required, install compression brace, see Section B3.2.
7. Fix concreting platform to the strongbacks, see Section B3.3.
8. Connect formwork to the platform unit, see Section B3.4.
9. Carry out the reinforcement work.
10. Fix the leading anchor, see Section B2.7.
11. Close and align the formwork, see Section B4.
12. Concrete the second section. (Fig. 09)

Striking

1. Release fixation of the leading anchor, see Section B2.8.
2. Strike the formwork,
 - SCS 190: see Section B4.4.
 - SCS 250: see Section B4.5.
3. Dismantle the mounting ring, see B2.9.
4. Ensure availability of mounted finishing platform, see Section B1.5.
5. If necessary: install wind bracing, see Section B2.5.
6. Connect the finishing platform, see Section B2. (Fig. 10)

Fig. 08

Fig. 09

Fig. 10

Moving

- **Persons are not to be transported!**
- **No loose components or other loads are to be transported!**
- **Site personnel must keep clear of the danger area!**

1. Attach crane lifting gear.
 2. Release securing pins, see Section B6.2.
 3. If required, install compression brace, see Section B3.2.
 4. Move climbing unit to the next section, see Section A5.
 5. If necessary: mount Access Ladder to the finishing platform, see Section B5.
- (Fig. 11)

Fig. 11

Standard cycle

1. If necessary: install wind bracing, see Section B2.5.
 2. If necessary: clean and align the formwork, see Section B3.
 3. Carry out the reinforcement work.
 4. Fix the leading anchor, see Section B2.7.
 5. Close and align the formwork, see Section B4.
- (Fig. 12)

Fig. 12

6. Concrete the standard section.
 7. Release fixation of the leading anchor, see Section B2.8.
 8. Strike the formwork,
 - SCS 190 see Section B4.4.
 - SCS 250 see Section B4.5.
 9. Dismantle the mounting ring, see Section B2.9.
 10. If necessary: install wind bracing, see Section B2.5.
 11. Close anchor hole, see Section B2.10.
 12. Move climbing unit to the next section, see Section B6.1.
 13. Insert securing pins, see Section B6.2.
- (Fig. 13)

Disassembly

Dismantle the climbing formwork, see Section B7.

Fig. 13

Target groups

Contractors

These Instructions for Assembly and Use are designed for contractors who either

- assemble, modify and dismantle the formwork systems, or
- use them, e.g. for concreting, or
- allow them to be used for other operations, e.g. carpentry or electrical work.

Competent person

(Construction Site Coordinator)

The Safety and Health Protection Coordinator*

- is appointed by the client,
- must identify potential hazards during the planning phase,
- determines measures that provide protection against risks,
- creates a safety and health protection plan,
- coordinates the protective measures for the contractor and site personnel so that they do not endanger each other,
- monitors compliance with the protective measures.

Competent persons qualified to carry out inspections

Due to the specialist knowledge gained from professional training, work experience and recent professional activity, the competent person qualified to carry out inspections has a reliable understanding of safety-related issues and can carry out inspections correctly. Depending on the complexity of the inspection to be undertaken, e.g. scope of testing, type of testing or the use of certain measuring devices, a range of specialist knowledge is necessary.

Qualified personnel

Climbing systems may only be assembled, modified or dismantled by personnel who are suitably qualified to do so. Qualified personnel must have completed a course of training** in the work to be performed, covering the following points at least:

- Explanation of the plan for the assembly, modification or dismantling of the formwork in an understandable form and language.
- Description of the measures for assembling, modifying or dismantling the formwork.

- Naming of the preventive measures to be taken to avoid the risk of persons and objects falling.
- Naming of the safety precautions in the event of changing weather conditions which could adversely affect the safety of the formwork system as well as the persons concerned.
- Details regarding permissible loads.
- Description of all other risks and dangers associated with assembly, modification or dismantling operations.

- **In other countries, ensure that the relevant national guidelines and regulations in the respective current version are complied with!**
- **If no country-specific regulations are available, it is recommended to proceed according to German guidelines and regulations.**
- **A competent person must be present on site during formwork operations.**

* Valid in Germany: Regulations for Occupational Health and Safety on Construction Sites 30 (RAB 30).

** Instructions are given by the contractor themselves or a competent person selected by them.

Intended use

Product description

PERI products have been designed for exclusive use in the industrial and commercial sectors only by suitably trained personnel.

The Climbing System SCS is used as shoring for wall formwork in accordance with DIN EN 12811 or DIN EN 12812.

A distinction is made between:

- single-sided, tie-less wall formwork.
- double-sided, anchored wall formwork.

The available set of Instructions for Assembly and Use deals with the double-sided, anchored application.

One climbing unit consists of:

- two climbing brackets with accessories,
- platform beams with planking,
- strongbacks with formwork and spindles.

One climbing bracket consists of:

- crossbeam,
- vertical strut and
- diagonal strut.

For assembly purposes, there are 2 alternatives for the crossbeam:

- Adjusting Unit (SCS 190).
- Adjusting Unit with Carriage (SCS 250).

The climbing brackets are connected to each other by scaffold tubes and the working platform. The forces arising from the dead load, live loads and wind load are transferred from the brackets via the climbing anchors and pressure point into the structure. Additional wind bracing prevents the system from tipping when empty or in a forward-inclined position.

In the standard configuration, VAR-IO GT 24 Girder Wall Formwork is connected to the platform unit and together this forms the climbing unit.

The climbing unit is moved using the crane. The load-bearing point is above on the strongback.

Several finishing platforms can be suspended on the bracket in order to dismantle the previously used climbing cone as well as to carry out reworking operations on the building.

One concreting platform as well as intermediate platforms can be attached to the strongback.

Access via ladders with hatches is possible with PERI standard components.

All-round side protection can be attached to all platforms.

Technical data

SCS 250:

- reach: approx. 2.50 m
- static height $h_0 = 2.58$ m or 2.40 m (see Section A2.1.).
- Maximum height of formwork: 6.00 m.

Depending on the type, the formwork can be retracted up to 78 cm in order to work in front of the formwork.

SCS 190:

- reach: approx. 1.90 m
- static height $h_0 = 2.58$ m or 2.40 m (see Section A2.1.).
- Maximum height of formwork: 6.00 m.

The formwork can be inclined by turning the heavy-duty spindle.

Instructions for Use

Use in a way not intended, deviating from the standard configuration or the intended use according to the Instructions for Assembly and Use, represents a misapplication with a potential safety risk, e.g. risk of falling.

Only PERI original components may be used. The use of other products and spare parts is not allowed.

Changes to PERI components are not permitted.

Cleaning and maintenance instructions

In order to maintain the value and operational readiness of the formwork materials over the long term, clean the panels after each use.

Some repair work may also be inevitable due to the tough working conditions.

The following points should help to keep cleaning and maintenance costs as low as possible.

Spray the formwork on both sides with concrete release agent before each use; this facilitates easier and faster cleaning of the formwork. Spray the concrete release agent very thinly and evenly!

Spray the rear side of the formwork with water immediately after concreting; this avoids any time-consuming and costly cleaning operations.

When used continuously, spray the panel formlining with concrete release agent immediately after striking; then clean by means of a scraper, brush or rubber lip scraper.

Important: do not clean formlining made of plywood with high-pressure equipment. This could result in the formlining being damaged.

Fix box-outs and mounting parts with double-headed nails; as a result, the nails can easily be removed later, and damage to the formlining is largely avoided.

Close all unused tie holes with plugs; this eliminates any subsequent cleaning or repair work.

Tie holes accidentally blocked with concrete are cleared by means of a steel pin from the formlining side.

When placing bundles of reinforcement bars or other heavy objects on horizontally stored formwork elements, suitable support, e.g. square timbers, is to be used: this prevents impressions and damage to the formlining to a large extent.

Internal concrete vibrators should be fitted with rubber caps if possible; as a result, any damage to the formlining is reduced if the vibrator is accidentally inserted between the reinforcement and formlining.

Never clean powder-coated components, e.g. elements and accessories, with a steel brush or hard metal scraper; this ensures that the powder-coating remains intact.

Use spacers for reinforcement with large-sized supports or extensive areas of support; this largely avoids impressions being formed in the formlining when under load.

Mechanical components, e.g. spindles or gear mechanisms, must be cleaned of dirt or concrete residue before and after use, and then greased with a suitable lubricant.

Provide suitable support for the components during cleaning so that no unintentional change in their position is possible.

Do not clean components suspended on crane lifting gear.

Storage and transportation

Store and transport components ensuring that no unintentional change in their position is possible.

Detach lifting accessories and slings from the lowered components only if they are in a stable position and no unintentional change is possible.

Do not drop the components.

Use PERI lifting accessories and slings and only those load-bearing points provided on the component.

During the relocation procedure

- ensure that components are picked up and set down so that unintentional falling over, falling apart, sliding, falling down or rolling is avoided.
- no persons are allowed to remain under the suspended load.

The access areas on the construction site must be free of obstacles and tripping hazards, as well as being slip-resistant.

For transportation, the base must have sufficient load-bearing capacity.

Use original PERI storage and transport systems, e.g. crate pallets, pallets or stacking devices.

Cross-system

General

The contractor must ensure that the Instructions for Assembly and Use supplied by PERI are available at all times and understood by the site personnel.

These Instructions for Assembly and Use can be used as the basis for creating a risk assessment. The risk assessment is compiled by the contractor. However, these Instructions for Assembly and Use do not replace the risk assessment!

Refer to and comply with the safety instructions and permissible loads.

For the application and inspection of PERI products, the current safety regulations and guidelines valid in the respective countries must be observed.

Materials and working areas are to be inspected on a regular basis, especially before each use and assembly, for:

- damage,
- stability and
- functional correctness.

Damaged components must be exchanged immediately on site and may no longer be used.

Safety components are to be removed only when they are no longer required.

Components provided by the contractor must comply with the characteristics stipulated in these Instructions for Assembly and Use and all applicable laws and standards. Unless otherwise indicated, the following applies in particular:

- timber components: strength class C24 for solid wood according to EN 338.
- Scaffold tubes: galvanised steel tubing with minimum dimensions \emptyset 48.3 x 3.2 mm according to EN 12811-1:2003 4.2.1.2.
- Scaffold tube couplings according to EN 74.

Deviations from the standard configuration are only permitted after a further risk assessment has been carried out by the contractor.

Appropriate measures for working and operational safety, as well as stability, are defined on the basis of this risk assessment.

Corresponding proof of stability can be provided by PERI on request, if the risk assessment and resulting measures to be implemented are made available.

Before and after exceptional occurrences that may have an adverse effect on the safety of the formwork system, the contractor must immediately

- produce another risk assessment and make use of its results to take suitable steps to guarantee the stability of the formwork system,
- arrange for an extraordinary inspection to be carried out by a competent person qualified to do so. The aim of this inspection is to identify and rectify any damage in good time in order to guarantee safe use of the formwork system.

Exceptional events could be:

- accidents,
- long periods of non-use,
- natural events, e.g. heavy rainfall, icing, heavy snowfall, storms or earthquakes.

Assembly, modification and dismantling work

Assembly, modification or dismantling of formwork systems may only be carried out by qualified persons under the supervision of a competent person. The qualified personnel must have received appropriate training for the work to be carried out with regard to specific risks and dangers.

On the basis of the risk assessment and the Instructions for Assembly and Use, the contractor must create installation instructions to ensure safe assembly, modification and dismantling of the formwork system.

The contractor must ensure that the personal protective equipment required for the assembly, modification or dismantling of the formwork system, e.g.

- safety helmets,
- safety shoes,
- safety gloves,
- safety goggles,

is available and used as intended.

If personal protective equipment against falling from a height (PPE) is required or specified in local regulations, the contractor must determine appropriate attachment points on the basis of the risk assessment.

The PPE against falling to be used is determined by the contractor.

The contractor must

- provide safe working areas for site personnel, which are to be reached through the provision of safe access ways. Areas of risk must be cordoned off and clearly marked.
- ensure stability during all stages of construction, in particular during assembly, modification and dismantling operations.
- ensure and provide evidence that all loads that occur are transferred safely.

Use

Every contractor who uses or allows formwork systems or sections of the formwork to be used, is responsible for ensuring that the equipment is in good condition.

If the formwork system is used successively or at the same time by several contractors, the health and safety coordinator must point out any possible mutual hazards and all work must be then coordinated.

System-specific

The contractor must ensure that assembly, modifications and dismantling, moving as well as the use and handling of the product is managed and supervised by professionally qualified and authorised personnel.

All persons working with the product must be familiar with the operating instructions and safety information.

The contractor must ensure that the Instructions for Assembly and Use, other instructions required for operations or assembly, relevant planning documents, parts lists and other information are available to the users.

Retract components only when the concrete has sufficiently hardened and the person in charge has given the go-ahead for striking to take place.

Anchoring is to take place only if the anchorage has sufficient concrete strength.

Close hatch cover immediately after climbing through the hatch.

Use a non-slip covering for the platforms.
Ensure that the coverings remain slip-resistant.

Never walk under suspended loads.

The distance between ladder rungs and side protection must not be less than 15 cm.

Assembly work

The contractor must ensure that the user has an appropriate and sufficient number of tools, lifting equipment and slings, suitable and sufficient space for assembly and storage as well as adequate crane capacity at his disposal.

Unexpected hazards can always arise when assembly work is carried out. Assess the degree of risk in each individual case and, if necessary, take measures to prevent or at least minimise the risk.

If anti-fall protection cannot be used or has to be removed due to operational reasons, safety equipment must be installed in its place in order to prevent falls from any height. If the use of fall arrest equipment is deemed to be inappropriate, personal protection equipment (PPE) can be used if suitable fixing points are available.

Use a guide rope to ensure that assembly units suspended from the crane are fully under control when being moved.

Avoid entering the area between suspended loads and the building.

Site personnel are forbidden to remain in areas below where assembly work is being carried out, unless the area of risk has been provided with sufficient protection against falling, overturned, sliding or rolling objects and masses.

Cordon off areas of risk.

Maintenance and repairs

The components of the climbing formwork are to be inspected before every use to ensure that they are in perfect condition. Only materials in perfect condition are to be used.

The platforms are to be inspected for signs of damage by authorised personnel at regular intervals.

Remove any loose concrete residue. Dirt which affects functionality is to be removed immediately. Damaged components should be inspected, removed and replaced.

In case of overload or damage, stop work on and under the platforms, determine the cause, set down and replace damaged components.

If the maximum permissible wind speed has been exceeded, temperatures are outside the scope of application or after any extraordinary event has taken place such as a fire or earthquake, the functionality and load-bearing capacity of all safety components as well as the supporting structure are to be checked.

Safety components:

- Regular visual inspections are to be carried out by qualified personnel.
- Before every climbing procedure or assembly, a functionality check is to be carried out by qualified personnel.
- Only PERI original components are to be used when replacing parts.
- Repairs are carried out by PERI qualified personnel only.

Supporting structure:

- A visual inspection is to be carried out by authorised personnel before initial use.
- Only PERI original components are to be used for repairs or replacement.

Other components:

- Inform authorised persons.
- Repairs are carried out by authorised personnel only.

Access

Safe access to all working areas must be guaranteed at all times.

Use walkways, stairs, stair towers or site lifts. Ladders are suitable for use as access ways in exceptional cases only.

Ladders must not be connected to each other for more than 2 levels and should be offset against one another. They must be secured on the outer side by means of appropriate anti-fall equipment such as rear safety protection or safety nets.

Suitable equipment must be available on hatches and openings on accessible areas in order to prevent accidents. After the ladder access is used each time, ensure that the hatch cover is closed.

In case of danger, it must be ensured that working areas can be vacated via emergency escape routes or rescue equipment. It must also be ensured that at least 1 emergency escape route or piece of rescue equipment can still be used if the power supply fails.

Protection against falling components

Work activities may not be carried out simultaneously on areas positioned on top of each other unless the lower working areas and access routes are provided with protection against falling objects such as tools or materials.

Avoid installing working areas and access routes in areas of risk. If this is not possible due to work procedures, suitable protection equipment must be available. This also applies to work that only takes a short period of time.

Operational working areas at great heights are to be secured by means of appropriate structural measures to prevent objects from falling down. Safety nets (mesh size ≤ 2 cm) and platform planking are considered to be suitable means and are to be installed very close to the structure (distance ≤ 5 cm).

Working areas positioned below must be protected using suitable protective roofs along the entire area at risk.

Secure all pins with cotter pins and all bolts with nuts.

Check connecting parts for signs of damage and ensure that they have been correctly installed.

Climbing procedure

Retract components only when the concrete has sufficiently hardened and the person in charge has given the go-ahead for striking to take place. Suspend climbing units on the next concreting section only after the required concrete strength has been reached.

As a result of the relocation procedure, falling edges are formed between the platforms. These areas are to be cordoned off!

Do not transport persons, building materials or tools when moving with the crane. Exceptions to this can be determined through the operational working and assembly instructions on the basis of a corresponding risk assessment.

In case of a malfunction, lower the platform to the next possible position, personnel are to leave the climbing unit in a safe and secure manner and an authorised person is to be notified immediately!

A1.1 Platform Design

- Assemble decking in accordance with the respective country-specific safety regulations.
- Avoid - or at least cover - the realisation of tripping hazards, unnecessary recesses and openings in the decking.
- Distance between the decking and building must not exceed 50 mm.
- Gaps in the decking must not exceed 20 mm.
- Planks are to be fitted tightly together.
- During working operations, we recommend a maximum distance of 20 mm between neighbouring platforms. Cover larger gaps with suitable and securely fitted materials. Alternative: use safety netting (94) with mesh size ≤ 20 mm.
- The dimensions given for the platforms are valid for vertical applications. For circular structures, adjust the decking accordingly.
- For circular structures, take additional measures in accordance with the given radius (see Section C1).
- Plan the corner platforms so that accessing 1 platform from another can be done safely.
- Access routes and climbing procedures must also ensure that safe escape routes are available at all times.

(Fig. A1.01)

A1.2 Identification Markings

We recommend marking each platform distinctly as well as creating a document containing the following data:

- Company name
- Construction site
- Name of the planner
- Marking in accordance with the plans
- Dimensions
- Weight of the unit with formwork
- Weight of the unit without formwork
- Maximum formwork height
- Permissible loads

Fig. A1.01

A1.3 Anchor Positioning Plate

Components

75 Anchor Positioning Plate M30

75a Anchor Positioning Plate M24

75b Anchor Positioning Plate M36

In order to ensure sufficient stability, we recommend fixing the leading anchor with the anchor positioning plate (**75/75a/75b**). During planning, make sure there is adequate space (dimension x_{min}), so that the positioning screw can be mounted.

Climbing Anchor M30: $x_{min} = 30$ mm.

Climbing Anchor M24: $x_{min} = 30$ mm.

Climbing Anchor M36: $x_{min} = 40$ mm.

H = height measurement.

Position of the Anchor Positioning Plate.
(Fig. A1.02)

Fig. A1.02

A2.1 System Dimensions

Position of the Spindle Connector

The position of the spindle connector (9.1) h_{Sp} and the position of the steel waler of the formwork must be included in the static calculations.

These dimensions are decisive for the bending load of the strongback (9). (Fig. A2.01)

- The spindle connector must be positioned below the middle steel waler.
- Design dimensions must be considered for the project-specific static calculations as these influence the load-bearing capacity.

Regular vertical application:

- h_B Concreting height = 4.00 m or 6.00 m
- h_0 Static bracket height 2.58 m/2.40 m
- c_2 Anchor spacing to concrete joint = 35 cm
- h_{nom} Anchoring depth of the climbing anchor
- a Position of bottom formwork waler = 46 cm
- b, c Waler spacing or anchor position
- k Distance of top waler to concrete joint
- h_F Top side of height adjusting unit = 661 mm
- h_{Sp} Position of Spindle Connector SCS = $2/3 \times h_s$; ($h_F - h_{Sp} \leq 2.00$ m)
- h_{cp} Position of concreting platform
- x_F Formwork depth
- L_{TB} Length of tie rod
- S Length of spindle

Fig. A2.01

A2.2 Permissible Width of Influence and Bearing Capacity

Standard application (double-sided)

- The permissible width of influence and related bearing reactions are available in the separate "SCS 190 and 250 – Double-Sided Application" dimensioning information.
- Convert the related bearing reactions while taking into account the dead load of the platforms.

Special cases

Determine the static proof for the actual/required width of influence and the related bearing reactions by means of a separate static calculation.

A2.3 Anchor Dimensioning

Climbing Anchor

- In Germany, Building Authority Approval No. Z-21.6-1766 and Z-21.6-1767 are to be taken into consideration for the verification of the load transfer into the concrete.
- For determining the required anchoring depth h_{nom} and concrete strength with specified minimum edge distances, take into consideration the separate "SCS 190 and 250 – Double-Sided Application" dimensioning information.
- If the minimum requirements regarding edge distances, reinforcement or concrete strength are not met, additional investigations for these conditions are to be implemented.

The following are to be verified by the project's structural engineer:

- The safe transfer of the anchoring forces into the concrete.
- The safe transfer of all bearing forces into the structure.
- The required concrete strength at which point the platforms can be moved.
- Verification and planning of possible additional reinforcement.

Transfer of forces:

- The bearing force from shear force V is transferred via the pressure on the periphery of the Climbing Cone V_T and Cone V_K into the concrete.
- The horizontal tensile force H is transferred via the pressure on the Threaded Anchor Plate N_A into the concrete. Shear stresses occur in the concrete along a considered breakout cone.
- The permissible tensile and shear forces are limited through the load-bearing capacity of the tie rod, the concrete strength when the load is imposed, edge distances c_2 of the anchoring as well as the anchoring depth h_{nom} .

(Fig. A2.02)

Fig. A2.02

A2.4 Platform Weights

Assembly unit		Height of formwork ≤ 4.00 m		Height of formwork 4.00 m to 6.00 m	
		SCS 190	SCS 250	SCS 190	SCS 250
		Fig. A2.03	Fig. A2.04	not shown	Fig. A2.05
Bracket unit weight [kg] ± 200 kg		440	510	580	660
Concreting platform	Platform beam [kg]	32	32	32	32
	Decking* [kg/m]	60	60	60	60
Intermediate platform	Platform beam [kg]	–	–	32	32
	Decking* [kg/m]	–	–	60	60
Working platform decking* [kg/m]		90	120	90	120
Intermediate finishing platform	Platform beam [kg]	–	–	32	32
	Decking* [kg/m]	–	–	60	60
Finishing platform	Platform beam [kg]	32	32	32	32
	Decking* [kg/m]	60	60	60	60
Formwork [kg/m²]		60	60	60	60

* The values can deviate depending on the decking. Take into account the project-specific planning.

Example: SCS 250

VARIO GT 24 Girder Wall Formwork, formwork height $h_s = 4.00$ m

Platform length $L = 5.00$ m

Concreting platform available

Finishing platform available

(Fig. A2.04)

Formwork area = 4.00 m x 5.00 m = 20 m²

Weight of the platform =

$(2 \times 510 \text{ kg} + 5 \text{ m} \times 120 \text{ kg/m}) + (2 \times (60 \text{ kg/m} \times 5 \text{ m} + 2 \times 32 \text{ kg})) + (20 \text{ m}^2 \times 60 \text{ kg/m}^2) =$

$1620 \text{ kg} + 728 \text{ kg} + 1200 \text{ kg} = 3548 \text{ kg} \pm 200 \text{ kg}$

B1.1 Working Platform SCS 190

- Provide and prepare an appropriate area for the assembly.
- Minimum width: standard planks = 240 mm Cut planking \geq 100 mm (compensation).
- Minimum thickness of planking: 40 mm.
- Bracket spacing c and cantilevers d_1 and d_2 as well as the total length L are specified in the planning details. (Fig. B1.01)

SCS 190 components

1 Crossbeam Unit SCS 190	2x
4 Bolt ISO 4014 M20 x 130-8.8	2x
5 Nut ISO 7042 M20-8	2x
6 Girder Support RCS	2x
21 Tension Anchor Connector CB/SCS	2x
36 Lattice Girder GT 24 as platform beam	4x
42 Hex. Wood Screw DIN 571 8 x 60	8x
44 TSS-Torx 6 x 80 (per plank)	8x
45 TSS-Torx 6 x 40 (per Angle Bracket)	8x
46 F.H. Bolt DIN 603 M8 x 45 MU	2x
48 F.H. Bolt DIN 603 M8 x 180 MU	4x
49 Washer ISO 7094 200 HV A 8	4x
54 Angle Bracket 90° reinforced	4x
55 Planking 40 x 240 mm	-
56 Toe Board 30 x 150 mm Covering - 4 mm	1x
Formlining	2x

Item no. - see Component Overview and Tool List

Preparation

Cut planking (55) to a length of 1890 mm.

Fig. B1.01

Warning

When assembling without any fixation, the crossbeam unit could tip over!
Risk of injury!
⇒ Secure the crossbeam unit.
⇒ Use assembly aids.

Connecting the crossbeam unit and girder support

1. Position the Crossbeam Unit SCS 190 (1) on support timbers and then align.
2. Attach Girder Support RCS (6) to the Crossbeam Unit SCS 190 (1) using Bolts M24 x 130 (6.1) and Nuts M24 (6.2).
3. Secure tension anchor connector (21) using Bolts M24 x 130 (4) and Nuts M24 (5).

(Fig. B1.02a + B1.02b)

Fig. B1.02a

Fig. B1.02b

Alternative wind bracing with tension belt (Item no. 051250):
Fix Bolts M24 x 130 (4) and Nuts M24 (5) directly on the crossbeam unit (1). (not shown)
Create a separate calculation.

During prefabrication with subsequent transportation, PERI recommends drilling through the beams and using carriage bolts.

Mounting the platform beams

1. Fix the platform (36) to both belts using 2x Hex. Wood Screws DIN 571 8 x 60 (42) on the outside to the Crossbeam Unit SCS 190 (1) – 2x respectively.
2. Drill through both platform beams (36) of the middle girder support (6) using \varnothing 8 mm laterally spaced at distance c and below with spacings of 30 and 180 mm.

Fix the platform beam (36) to both belts using F.H. Bolt DIN 603 M8 x 180 (48) and Washer ISO 7094 200 HV A 8 (49) to the girder support (6).

(Fig. B1.03)

Fig. B1.03

If country-specific standards require a different decking, chipboard panels can be used instead of planking.

Mounting the planking

1. Place planking at right angles on the platform beam (36) starting with the planks (55) next to the Crossbeam Unit SCS 190 - width may have to be cut to required size.
2. Fix each plank (55) to the platform beam (36) using 4x TSS Torx 6 x 80 (44) respectively – 2x when crossing the lattice girder.
3. Place toe board (56) on the planking.
4. Fix toe board to the crossbeam:
 - Pre-drill (Ø 8 mm) toe board.
 - Fix Toeboard with F.H. bolt DIN 603 M8 x 45 (46) to the Crossbeam.
 - Fix toe board to cantilevers and between the crossbeams using angle connectors 90° reinforced (54) and Torx 6 x 40 (45) to the platform.
5. Close gaps in the decking below the crossbeam with 4 mm thick formlining strips or boards.
Leave open gaps for anchor positions and diagonal struts.

(Fig. B1.04)

Fig. B1.04

B1.2 Working Platform SCS 250

- Provide and prepare an appropriate area for the assembly.
- Minimum width: standard planks = 240 mm
Cut planking ≥ 100 mm (compensation).
- Bracket spacing c and cantilevers d_1 and d_2 as well as the total length L are specified in the planning details.

SCS 250 components

2 Crossbeam Unit SCS 250	2x
3 Girder Support RCS	2x
4 Bolt ISO 4014 M20 x 130-8.8	2x
5 Nut ISO 7042 M20-8	2x
21 Tension Anchor Connector CB/SCS	2x
36 Lattice Girder GT 24 as platform beam	6x
38 Girder Fixation M20	4x

55 Planking 40 x 240 mm	–
56 Toe Board 30 x 150 mm	1x
62 Plank L x 40 x 120 mm Covering – 4 mm	1x
Formlining	2x

Item no. - see Component Overview and Tool List

Preparation

- Cut planking (**55**) to a length of 2491 mm.
- Cut formlining strips (**44**) to size. Dimensions: $d \times w \times h = 27 \times 120 \times 130$ mm.
- Remove cotter pins (**3.2**) with bolts (**3.1**) and screws (**2x 3.3 + 1x 3.5**) from the girder support (**3**).

Fig. B1.05

Connecting the crossbeam and girder support

1. Position the Girder Support SCS (3) on an assembly platform.
2. Lift the Crossbeam Unit SCS 250 (2) with the U-profile (2.12) firstly into the connection lug (3.9) and then with the U-profile (2.12) into the connection plates (3.8) of the Girder Support SCS (3).
3. Fix the Girder Support SCS (3):
 - to the side of the carriage (2.11) using bolts 12 x 146 (3.1) and Cotter Pins 4/1 (3.2).
 - to the opposite side using Bolt ISO 4014 M20 x 170 (3.5) and Nut ISO 7040 M20-8 (3.4)
4. Secure tension anchor connector (21) using Bolts M24 x 130 (4) and Nuts M24 (5).

(Fig. B1.06 + B1.07)

Alternative wind bracing with tension belt (Item no. 051250):

Fix Bolts M24 x 130 (4) and Nuts M24 (5) directly on the Crossbeam Unit (1).

(not shown)

Create a separate calculation.

Mounting the platform beams

1. Secure Girder Fixation M20 (38) to the Girder Support SCS (3) using Bolt ISO 4014 M24 x 130-8.8 (38.1) and Nut ISO 7040 M24-8 (38.2) – 2x. (Fig. B1.08)
2. Place platform beam (36) in the Girder Fixation M20 (38) – 2x.
3. Secure platform beams (36) using TSS Torx 6 x 40 (45) - 4x per Girder Fixation M20 (38) respectively.
4. Align components at right angles to each other. (Fig. B1.09)

Fig. B1.06

Fig. B1.07

Fig. B1.08

Fig. B1.09

5. Position box-out (**300 x 120 x 26**) on platform beam.
6. Place additional platform beams (**36a**) on the existing 1 and pre-drill with $\varnothing 8$ mm, laterally spaced at distance c and below with spacings of 95 and 165 mm. (Fig. B1.10a)
6. Fix platform beam with F.H. Bolt DIN 603 M8 x 180 (**48**) and Washer ISO 7094 200 HV A 8 (**49**).
8. Position 2 lattice girders on the opposite side of the carriage (**2.11**) and pre-drill with $\varnothing 8$ mm, laterally spaced at distance c and below with 65 and 140 mm spacings. (Fig. B1.10b)
9. Secure Platform Beams (**36b**) on both Tension Belts using F.H. bolt DIN 603 M8 x 180 (**48**) and washers ISO 7094 200 HV A 8 (**49**).

Fig. B1.10

Section A - A

Fig. B1.10a

View X

Fig. B1.10b

Mounting the planking

1. Place planking at right angles on the platform beam (36) starting with the planks (55) next to the Crossbeam Unit SCS 190 - width may have to be cut to required size.
2. Fix each plank (55) to the platform beam (36) using 4x TSS Torx 6 x 80 (44) respectively – 2x when crossing the lattice girder.
3. Place toe board (56) on the planking.
4. Fix toe board to the crossbeam:
 - Pre-drill (Ø 8 mm) toe board.
 - Fix Toeboard with F.H. bolt DIN 603 M8 x 45 (46) to the Crossbeam.
 - Fix toe board to cantilevers and between the crossbeams using angle connectors 90° reinforced (54) and Torx 6 x 40 (45) to the platform.
5. Close gaps in the decking below the crossbeam with 4 mm thick formlining strips or boards.
Leave open gaps for anchor positions and diagonal struts.
6. Attach additional planks L x 40 x 120 mm (62) to the planking (55) on the wall side using Torx 6 x 80 (44).
(Fig. B1.11)

Fig. B1.11

B1.3 Mounting the Hatches

- Minimum plank width 120 mm.
- Install hatch directly next to the bracket. As a result, the ladder descent is between the horizontal and diagonal scaffold tube bracing of the bracket unit and then keeping to the spindle when climbing upwards.

For the transition area between the platforms, hatches must be mounted.

Components

45 TSS-Torx 6 x 40	20x
50 Washer ISO 7094 100 HV, A 8	8x
82 Hatch RCS 55 x 60-2, foldable	1x
alternatively:	
Hatch 55 x 60, foldable	1x
Sliding Hatch Cover*	1x
96 F.H. Bolt DIN 603 M8 x 100 MU	8x
101 TSS-Torx 6 x 60	8x
107 Plank L ~ 125 cm, min. 120 x 40 mm	2x

*Attention! The recess of the sliding hatch in the decking has a different size. Details are available on request.

Preparation

1. Cut recess 72 x 57 cm between the crossbeams in the planking. Remaining planking width on crossbeam: 10 cm.
 2. Place planking (**107**) laterally on both sides under the pieces of planking.
→ Support.
 3. Pre-drill end-to-end planking (min. 24 cm wide) and planks (**107**) with \varnothing 8 mm: 4x in each case.
 4. Fix planking (**107**) and end-to-end planks (**55a**) from above using 4x F.H. Bolt DIN 603 M8 x 100 MU (**96**) and Washer ISO 7094 100 HV, A 8 (**50**) respectively.
 5. Secure planking (**55b**) and planks (**107**) from above using 2x Torx 6 x 60 (**101**) respectively.
- (Fig. B.1.12 + B.1.12a)

Fig. B.1.12

Fig. B.1.12a

Assembly

1. Place Hatch RCS 55 x 60-2, foldable (**82**) in the prepared recess. The opened hatch cover (**82.1**) points towards the wall side. (Fig. B1.13a)
2. Secure frame of the hatch and decking using approx. 16x TSS Torx 6 x 40 (**45**) (**2 per plank**). (Fig. B1.13b)

Mount hatches and access ladders on the corner platforms.
→ Free access to the hatch is possible.

Fig. B1.13a

Fig. B1.13b

B1.4 Mounting the Brackets

Mount the bracket components on the working platform.
(Fig. B1.14a + B1.14b)

- Depending on the planned static height h_0 , take into consideration the different M30 bolt positions for connecting the Crossbeam Unit SCS and Diagonal Strut SCS 257 to the Vertical Strut SCS 237.
- Crossbeam Unit SCS 250 is shown here for the assembly of the brackets.
- Provide and prepare an appropriate area for the assembly.

SCS 190

Fig. B1.14a

SCS 250

Fig. B1.14b

Bracket components

7 Vertical Strut SCS 237	2x
8 Diagonal Strut RCS 257	2x
97 Scaffold Tube Steel Ø 48.3 x 3.2 Special length	3x
98 Swivel Coupling DK 48/48	2x

Preparation

Loosen bolts and nuts, and place to 1 side:

- 4x M20 on the vertical strut (**7**)
- 2x M30 on the diagonal strut (**8**)
- for the SCS 250, 2x M20 on platform beam support (**3**)

For working platform with hatch, secure the diagonal scaffold tube at the top next to the hatch. This will prevent a collision with the ladder (see Section B5).

Assembly

1. Place Vertical Struts SCS 237 (7) on the assembly level (support height = 260).
2. Attach crane lifting gear to the spindle connection of Carriage SCS 250 (2.1) or Crossbeam Unit SCS 190.
 - Insert fitting pins $\varnothing 26 \times 120$ in the holes of the spindle connection and secure with cotter pins 5/1.
 - Attach crane lifting gear to the fitting pins.
3. Lift the working platform and place the crossbeam unit at the top end of the Vertical Strut SCS 237 (7). Support the crossbeam head against tipping the unit with a 2-cm board.
4. Fix Vertical Struts SCS 237 (7) to the Platform Beam Support SCS (3) using Bolts ISO 4014 M20 x 160 (3.3) and Nuts ISO 7040 M20-8 (3.4). (Fig. B1.15a + B1.16a)

Bracket $h_0 = 2.58 \text{ m}$

Fig. B1.15

5. Fix diagonal struts (8) to the crossbeam unit (2) and Vertical Strut SCS 237 (7) using Bolt M30 x 140-8.8 (8.1) and Hex. Nut MU ISO 7040 M30-8 (8.2). (Fig. B1.15b + B1.16b)
6. Remove crane lifting gear.
7. Fix 2 Scaffold Tubes Steel 48.3 x 3.2 (97a) parallel to the Screw-On Couplings AK 48 (8.3).
8. Diagonally fix Scaffold Tubes Steel 48.3 x 3.2 (97b) to the horizontal scaffold tubes (97a) using Swivel Couplings DK 48/48 (98). (Fig. B1.15 or B1.16)

Bracket $h_0 = 2.40 \text{ m}$

Fig. B1.16

B1.5 Guardrails

There are 2 options for anti-fall protection:

- Standard handrail boards: 40 x 120 mm.
- Fix standard scaffold tubes: \varnothing 48.3 x 3.2 mm to: Guardrail Connector CB.
- The Crossbeam Unit SCS 250 is shown here for assembly. (Fig. B1.17a + B1.17b)

Preparation

1. Remove 2x fitting pins \varnothing 26 (**2.8**) and cotter pins 5/1 (**2.9**) from the marked positions on the Adjusting Unit SCS (**2.11**). (Fig. B1.18a)
2. Insert fitting pins \varnothing 26 (**2.8**) into the holes on the crossbeam and secure with cotter pins 5/1 (**2.9**). (Fig. B1.18a + B1.18b)
3. Attach crane lifting gear to the fitting pins. (Fig. B1.18)

SCS 190

Fig. B1.18

Mounting the Handrail Boards

Components per platform

57 Guardrail Post RCS 150	2x
96 F.H. Bolt DIN 603 M8 x 100 MU	6x
107 Plank L x 12 x 4 cm	3x

Assembly

1. Fix Guardrail Post SCS 150 (**57**) to Crossbeam Unit SCS 250 (**2**) using Bolts ISO M20 x 120-8.8 (**2.6**) and Nuts ISO 7040 M20-8 (**2.7**).
2. Position plank L x 12 x 4 cm (**107**) on Guardrail Post SCS 150 (**57**).
3. Pre-drill board (Ø 8 mm).
4. Connect Guardrail Post SCS 150 (**57**) and plank L x 12 x 4 cm (**107**) using F.H. Bolt DIN 603 M8 x 100 MU (**96**). (Fig. B1.19a)

Fig. B1.19a

Mounting the scaffold tubes

Components per platform

49 Washer ISO7090-8-200HV	6x
57 Guardrail Post RCS 150	2x
63 Guardrail Connector CB	6x
96 Screw ISO4762-M8x70-8.8-ga	6x
97 Scaffold Tube Steel Ø 48.3 x 3.2 Special length	3x

Assembly

1. Fix Guardrail Post SCS 150 (**57**) to Crossbeam Unit SCS 250 (**2**) using Bolts ISO M20 x 120-8.8 (**2.6**) and Nuts ISO 7040 M20-8 (**2.7**).
2. Mount Guardrail Connector CB (**63**) to Guardrail Post SCS 150 (**57**) using Screw ISO4762-M8x70-8.8-ga (**96**) and Washer ISO7090-8-200HV (**49**).
3. Position Scaffold Tube Steel (**97**) and secure. (Fig. B1.19b)

Fig. B1.19b

B1.6 Finishing Platforms, Concreting Platforms and Intermediate Platforms

- The number of platforms is given in the project-specific planning.
- Provide and prepare an appropriate area for the assembly.
- Minimum width: standard planks = 240 mm Cut planking ≥ 100 mm (compensation).
- Minimum thickness of planking: 40 mm.
- Bracket spacing c and cantilevers d_1 and d_2 as well as the total length L are specified in the planning details.

Components per platform

15 Start Roller ACS (only finishing platform)	2x
17 Platform Beam SCS 120	2x
36 Lattice Girder GT 24 as platform beam	4x
44 TSS-Torx 6 x 80 (per plank)	4x
45 TSS-Torx 6 x 40 (per Angle Bracket 90° reinforced)	8x
48 F.H. Bolt DIN 603 M8 x 180	8x
MU	8x
54 Angle Bracket 90° reinforced	13x
55 Planking 40 mm	–
56 Toe Board 30 x 150 mm	1x
57 Guardrail Post RCS 150	2x
99 Fitting Pin $\varnothing 21 \times 120$	4x
100 Cotter Pin 4/1	4x

Preparation

Cut planking (**55**) to a length of 1343 mm.

Detail B

Fig. B.120a

Fig. B.120

Assembly

1. Position box-out (**300 x 120 x 26**) on platform beam.
2. Drill through platform beam (**36**) with \varnothing 8 mm.
3. Secure Platform Beam (**36**) on Platform Beam SCS 120 (**17**) using F.H. bolts DIN 603 M8 x 180 (**48**) and washers ISO 7094 200 HV A 8 (**49**).
4. Rectangularly align Platform Beam SCS 120 (**17**) (check diagonal dimensions).
5. Place planking at right angles on the platform beam (**36**) starting with the planks (**55**) next to the Platform Beam SCS 120.
6. Fix each plank (**55**) to the platform beam (**36**) using 4x TSS Torx 6 x 80 (**44**) respectively – 2x when crossing the lattice girder.
7. Place toe board (**56**) on the planking.
8. Fix toe board to the platform using Angle Connectors 90° reinforced (**54**) and Torx 6 x 40 (**45**).
9. Leave open gaps for platform posts.
10. Attach additional planks L x 12 x 4 (**107**) to the planking (**55**) on the wall side using Torx 6 x 80 (**44**).
11. Install Guardrail Post SCS 150 using 2x fitting pins \varnothing 21 x 120 (**99**) respectively and secure with cotter pins 4/1 (**100**).
12. Fix Guardrails, see Section B1.5.
13. On the finishing platform, fix 2x Start Rollers (**21**) on the planking (**55**) using 4x wood screws DIN 571 8 x 80 (**43**).

(Fig. B1.21 + B1.21a – c)

Fig. B1.21b

Fig. B1.21c

B1.7 Finishing Platform Unit

- Secure finishing platform unit to prevent tipping.
- Assembly of finishing platform units without intermediate finishing platform or with a Platform Post Double SCS 232 in the same way.
- Place Platform Post Double SCS 232 (**18**) on suitable timbers (e.g. 30 x 40 cm) and position.

Components

E Finishing platform	1x
optional:	
F Intermediate platform	1x
18 Platform Post Double SCS 232	2x
19 Platform Post Connector SCS	1x
20 Scaffold Tube Connector SCS 48	2x
97 Scaffold Tube Steel Ø 48.3 x 3.2 special length	3x
98 Swivel Coupling DK 48/48	2x

Assembly

1. Connect the Platform Post Double SCS 232 (**18**) and Platform Post Connector SCS 232 (**19**) using pre-mounted fitting pins Ø 21 x 120 (**18.1 + 19.1**) and cotter pins 4/1 (**18.2 + 19.2**).
2. Mount the Scaffold Tube Connector SCS 48 (**20**) on the platform post using fitting pins Ø 21 x 120 (**20.1**) and cotter pins 4/1 (**20.2**).
3. Mount finishing platform (**E**) on the Platform Post Double SCS 232 (**18**) using fitting pins Ø 21 x 120 (**17.1**) and cotter pins 4/1 (**17.2**).

optional:

4. Mount finishing platform (**F**) on the Platform Post Double SCS 232 (**18**) using fitting pins Ø 21 x 120 (**17.1**) and cotter pins 4/1 (**17.2**).

(Fig. B1.22 + B1.23)

Fig. B1.22

Fig. B1.23

Fitting the bracing

1. Fold down Guardrail Post SCS 150 (**57**) to the rear and re-insert fitting pins $\varnothing 21 \times 120$ and secure with cotter pins 4/1.
2. Fix 1x Scaffold Tube Steel 48.3 x 3.2 (**97a**) respectively to the Scaffold Tube Connectors SCS 48 (**20**).
3. Diagonally fix Scaffold Tubes Steel 48.3 x 3.2 (**97b**) to the horizontal scaffold tubes (**97a**) using Swivel Couplings DK 48/48 (**98**).
(Fig. B1.24a + B1.24b)

Fig. B1.24a

Fig. B1.24b

B1.8 End Guardrail

- Lateral side protection is required to be installed on all end platforms without adjacent platforms.
- For alternative fixing possibilities: see PI Sheet 375.
- The length of the guardrails and toe boards must correspond to the width of the platforms.
- If the offset of the platform beam is insufficient, the Guardrail Post Holder Multi must be assembled in advance. (Fig. B1.25a)

Components

46 F.H. Bolt DIN 603 M8 x 45 MU	2x
49 Washer ISO 7094 200 HV, A8	2x
56 Toe Board 30 x 150 mm	1x
57 Guardrail Post RCS 150	2x
59 Guardrail Post Holder Multi	2x
99 Fitting Pin Ø 21 x 120	4x
100 Cotter Pin 4/1	4x
101 TSS-Torx 6 x 60	24x

Assembly

1. Fix Guardrail Post Holder Multi (**59**) to the platform beam (**36**) using 12x TSS-Torx 6 x 60 (**101**).
2. Install Guardrail Post SCS 150 (**57**) using 2x fitting pins Ø 21 x 120 (**99**) respectively and secure with cotter pins 4/1 (**100**).
3. Fix guardrails, see Section B1.5.
4. Fix toe board (**56**) to the Guardrail Post Holder Multi (**59**):
 - Pre-drill (Ø 8 mm) toe board.
 - Fix Toeboard using F.H. bolts DIN 603 M8 x 45 MU (**46**) and washers ISO 7094 200 HV, A8 (**49**).

Fig. B1.25

Fig. B1.25a

B2.1 Initial Use

- Not to be used for transporting site personnel.
- Do not transport any loose materials or other loads.
- Use a guide rope.

Mounting procedure

1. Strike starter formwork after releasing the mounting for the leading anchor (see Section B2.7).
2. Mount Mounting Ring SCS M30 (81) on the Climbing Cone-2 M30/DW20 (70) (see Section B2.8).
3. Pull securing pins (2.3) and insert in climbing position (see Section B6.2).
4. Attach crane lifting gear (see Section B1.5).
5. Lift the working platform unit using the crane and move to designated position.
6. Lower the working platform unit and hook into the Mounting Ring SCS M30 (81) using the crossbeam heads.

Check whether both crossbeam heads are completely and securely in the correct position.

7. Insert securing pins (2.3) in the securing position (see Section B6.2).
8. Release crane lifting gear and re-attach fitting pins $\varnothing 26$ (2.8) to the adjusting unit and secure with cotter pins 5/1 (2.9).

Fig. B2.01

Mounting the wind bracing and formwork

1. Mount wind bracing (if required) on the Tension Anchor Connector CB/SCS (21) and Tension Anchor Connector Wall (31).
2. Install Reducing Bushing $\text{Ø } 26 - 21$ (103) on the spindle connection point (2.2) of the crossbeam unit (1/2) from the inside in the connection plate using a hammer.
3. Mount Strongback SCS 325 (9) on the Adjusting Unit SCS (1.1) or Carriage SCS (2.1) using fitting pins $\text{Ø } 26$ (2.8) and secure with cotter pins 5/1 (2.9).
4. Install Heavy-Duty Spindle SLS (14) on Spindle Connector SCS $\text{Ø } 26-21$ (9.1) and spindle connection point (2.2) using 1 x fitting pin $\text{Ø } 21 \times 120$ (99) respectively, and secure with cotter pins 4/1 (100).
5. Mount the leading anchor on the formwork (see Section B2.6).

- If installation in the mounting ring is unsuccessful or the bracket jams, lift the platform unit and lower again.
- If the bracket spacing does not match that of the mounting rings, check the distance of the leading anchor to the formwork.
- If the mounting procedure is not possible, the bracket spacing must be corrected through re-assembling the platform.
- If the Heavy-Duty Spindle SLS is used, then 2 Reducing Bushings $\text{Ø } 26 - 21$ (103) must be mounted in the spindle connector. Knock in Reducing Bushings with a hammer from the inside. (Fig. B2.02a)

Fig. B2.02

B2.2 Mounting the finishing platform – starting height 3 – 5 m

Assembly

1. Remove 2x Bolts ISO 4014 M20 x 130-8.8 (7.1) and Nuts ISO 70404 M20-8 (7.2) from the connection plate and set aside or mount in the bottom row of holes.
2. Bring the load-bearing point over the centre of gravity by pulling back the carriage or tilting the formwork.
3. If necessary, release the wind bracing from the wall.
4. Mount Limit Stop Platform Post SCS (16) on the Vertical Strut SCS 237 (7) using Bolts ISO 4014 M24 x 130-8.8 (16.1) and Nuts ISO 7040 M24-8 (16.2). (Fig. B2.03a)
5. Fix the Platform Post Double SCS 232 (18) to the Vertical Strut SCS 237 (7) in the top hole using fitting pins \varnothing 21 x 120 (18.1) and secure with cotter pins 4/1 (18.2). (Fig. B2.03a)
6. Fix 2x Scaffold Tube Steel 48.3 x 3.2 (97a) respectively to the Scaffold Tube Connectors SCS 48 (20).
7. Diagonally fix Scaffold Tubes Steel 48.3 x 3.2 (97b) to the horizontal scaffold tubes (97a) using Swivel Couplings DK 48/48 (98) (see Section B1.7). (Fig. B2.03)
8. Position finishing platform (E) by means of the crane and mount using 4x fitting pins \varnothing 21 (17.1) and secure with cotter pins (17.2). (Fig. B2.04a)
9. Fold up guardrails and lock in place using fitting pins. (Fig. B2.04)

Spacers on the Platform Post Double SCS 232 (18.3) must always be positioned under the fixing of the vertical strut (7) and in the third-last hole. In case of any collision with the platform beam position, the spacer must be moved (see Section B3.6).

Fig. B2.03

Fig. B2.04

Danger

Finishing platform unit swings when in a vertical position!

Crushing risk.

⇒ Leave the area of risk.

- For moving the climbing unit (platform with formwork) using 2-sling lifting gear, a compression brace must be placed between the strong-backs (see Section B3.2).

Moving

1. Attach the climbing unit to the crane lifting gear and move to the next casting segment.
2. Attach the climbing unit in the Mounting Ring SCS M30 (**81**).
3. Insert securing pins (**2.3**) in the securing position (see Section B6.2).
4. Fix the Platform Post Double SCS 232 (**18**) using the second fitting pin $\varnothing 21 \times 120$ (**18.1**) and secure with cotter pin 4/1 (**18.2**).
5. Remove the Limit Stop Platform Post SCS (**16**).
6. Dismantle the Mounting Ring SCS M30 (**81a**).
7. If necessary, mount wind bracing.

Fig. B2.05a

Fig. B2.05b

Fig. B2.05c

B2.3 Mounting the finishing platform – starting height 3 – 6 m

Assembly

1. Remove 2x Bolts ISO 4014 M20 x 130-8.8 (**7.1**) and Nuts ISO 70404 M20-8 (**7.2**) from the connection plate and set aside or mount in the bottom row of holes.
2. If necessary, release the wind bracing from the wall.
3. Mount Limit Stop Platform Post SCS (**16**) on the Vertical Strut SCS 237 (**7**) using Bolts ISO 4014 M24 x 130-8.8 (**16.1**) and Nuts ISO 7040 M24-8 (**16.2**).
4. Fix the finishing platform unit to the Vertical Strut SCS 237 (**7**) in the top hole using fitting pins $\varnothing 21 \times 120$ (**18.1**) and secure with cotter pins 4/1 (**18.2**).
5. Fold up guardrails and lock in place using fitting pins.

Spacers on the Platform Post Double SCS 232 (**18.3**) must always be positioned under the fixing of the vertical strut (**7**) and in the third-last hole. In case of any collision with the platform beam position, the spacer must be moved (see Section B3.6).

Fig. B2.06

Fig. B2.07a

Fig. B2.07

Danger

Finishing platform unit swings when in a vertical position!

Crushing risk.

⇒ Leave the area of risk.

- For moving the climbing unit (platform with formwork) using 2-sling lifting gear, a compression brace must be placed between the strong-backs (see Section B3.2).

Moving

1. Attach the climbing unit to the crane lifting gear and move to the next casting segment.
2. Attach the climbing unit in the Mounting Ring SCS M30 (81).
3. Insert securing pins (2.3) in the securing position (see Section B6.2).
4. Fix the Platform Post Double SCS 232 (18) using the second fitting pin $\varnothing 21 \times 120$ (18.1) and secure with cotter pin 4/1 (18.2).
5. Remove the Limit Stop Platform Post SCS (16).

Fig. B2.08a

Fig. B2.08b

Fig. B2.08c

B2.4 Mounting the finishing platform unit – large starting heights

If the starter height is greater than the Platform Unit SCS with finishing platform unit, the entire unit can be pre-assembled on the ground.

Assembly

1. Remove 2x Bolts ISO 4014 M20 x 130-8.8 (**7.1**) and Nuts ISO 70404 M20-8 (**7.2**) from the connection plate and set aside or mount in the bottom row of holes.
2. Fix the finishing platform unit to the Vertical Strut SCS 237 (**7**) in the top hole using fitting pins $\varnothing 21 \times 120$ (**18.1**) and secure with cotter pins 4/1 (**18.2**).
3. Suspend the complete Platform Unit SCS with the crane in the first concreting cycle.

Fig. B2.09

Fig. B2.09a

Fig. B2.10

Danger

When installing the anti-fall protection, there is no existing fall protection!

Risk of falling.

⇒ Use PPE.

Mounting the guardrails

1. Fix Guardrail Post SCS 150 (57) to Crossbeam Unit SCS 250 (1/2) using Bolts ISO M20 x 120-8.8 (2.6) and Nuts ISO 7040 M20-8 (2.7).

Fig. B2.11

B2.5 Wind Bracing

Assemble wind bracing according to static requirements.

Tension belt

- When not in use, wrap the tension belt around the guardrail of the finishing platform and secure.
- A tension belt can be used for concreting heights up to 5.40 m.

Assembly

1. Attach tension belt L = 5.70 m, 2.5 t (30) to the Bolt ISO 4014 M20 x 130-8.8 (4) of the Crossbeam Unit SCS (1) or Platform Beam Support SCS (3) using the hook of the longer end.
2. Fix the Belt Connector Wall M24 (32) to the Climbing Cone using Bolt ISO 4014 M24 x 70-10.9 (33).
3. Insert tension belt L = 5.70 m, 2.5 t (30) on the inner side of the bracket and attach hook to the Tension Belt Connector Wall M24 (32).
4. Adapt length of tension belt L = 5.70 m, 2.5 t (30) and tighten using a ratchet lever (30.1).

Fig. B2.12

Releasing

1. Release tension belt L = 5.70 m, 2.5 t (30) using the ratchet lever (30.1).
2. Remove tension belt L = 5.70 m, 2.5 t (30) from the Tension Belt Connector Wall M24 (32).
3. Release Belt Connector Wall M24 (32) from the climbing cone.
4. Remove the climbing anchor (see B2.9).

Tie Rod DW 15, Anchor M24

When not in use, attach the Tie Rod DW 15 to the finishing platform, e.g. with tie wire.

Assembly

1. Screw Tie Rod DW 15 (**22**) into the Tension Anchor Connector CB/SCS (**21**).
2. Release Turnbuckle CB M20/DW 15 (**28**) from the Tension Anchor Connector Wall (**32**) and screw onto Tie Rod DW 15 (**22**).
3. Fix the Belt Connector Wall (**32**) to the climbing cone using Bolt ISO 4014 M24 x 70-10.9 (**33**).
4. Re-attach Turnbuckle CB M20/DW 15 (**28**) with eye bolt to the Tension Anchor Connector Wall (**32**) using bolts $\varnothing 16 \times 42$ and cotter pins 4/1.
5. Tension the wind bracing by turning the Turnbuckle CB M20/DW 15 (**28**).

Releasing

1. Turn the Tension Anchor Connector Wall (**32**) in order to release the wind bracing.
2. Remove the Tension Anchor Connector Wall (**32**) from the climbing cone.
3. Remove the climbing anchor (see B2.9).

Fig. B2.13

Tie Rod DW 15, Anchor M30

When not in use, attach the Tie Rod DW 15 to the finishing platform, e.g. with tie wire.

Assembly

1. Screw Tie Rod DW 15 (**22**) into the Tension Anchor Connector CB/SCS (**21**).
2. If necessary, couple Tie Rod DW 15 (**22**) with Hex. Nut DW 15 SW 30/108 (**24**).
3. Slide Articulated Spanner RCS DW 15 (**25**) onto the Tie Rod DW 15 (**22**) and secure using the Hex. Nut DW 15 SW 30/50 (**23**).
4. Fix the Bracing Shoe SCS M30/M24 (**34**) to the climbing cone using Bolt ISO 4017-M30 x 080-10.9 (**35**).
5. Install Articulated Spanner RCS DW 15 (**25**) in the Bracing Shoe SCS M30/M24 (**34**) using fitting pins $\varnothing 26 \times 120$ (**107**) and secure with cotter pins 5/1 (**108**).
6. Tension wind bracing by turning the Hex. Nut DW 15 SW 30/50 (**23**) by means of a wrench.

Releasing

1. For releasing the wind bracing, remove the Hex. Nut DW 15 SW 30/50 (**23**) by means of a wrench.
2. Release Bracing Shoe SCS M30/M24 (**34**) from the climbing cone.
3. Remove the climbing anchor (see B2.9).

Fig. B2.14

Tie Rod DW 15, formwork bracing

- When not in use, attach the Tie Rod DW 15 to the finishing platform, e.g. with tie wire.
- If no intermediate platform is available or the platform system of the wall formwork is used, the wind bracing can be directly mounted on the strongback above the Heavy-Duty Spindle SLS.
- Install additional formwork wind bracing according to static requirements.

Assembly

1. Screw Tie Yoke VARIOKIT Ø 22/DW 15 (27) on the Tie Rod DW 15 (22).
2. Bolt Tie Yoke VARIOKIT Ø 22/DW 15 (27) to the Platform Beam SCS 120 (17) using fitting pin Ø 21 x 120 (99) and secure with cotter pins 4/1 (100).
3. Slide Articulated Spanner RCS DW 15 (25) onto the Tie Rod DW 15 (22) and secure using the Hex. Nut DW 15 SW 30/50 (23).
4. Bolt Articulated Spanner RCS DW 15 (25) onto the Crossbeam Unit (1/2) using fitting pins Ø 26 x 120 (107) and secure with cotter pins 5/1 (108).
5. Tension wind bracing by turning the Hex. Nut DW 15 SW 30/50 (23) by means of a wrench.

Fig. B2.15

Releasing

1. For releasing the wind bracing, remove the Hex. Nut DW 15 SW 30/50 (23) by means of a wrench.

B2.6 Mounting the Leading Anchor

Preparation

Measure out the position of the leading anchor and mark on the surface of the formlining.

Standard: Positioning Screw

- Ensure there is sufficient distance to the formwork girder.
- If the distance is insufficient, the positioning disc must be used.
- Check all anchor components, assembly and position before concreting takes place.

Components per climbing anchor

70 Climbing Cone-2 M30/ DW 20	1x
71 Tie Rod DW 20	1x
73 Threaded Anchor Plate DW 20	1x
74 Positioning Screw M30	1x
75 Anchor Positioning Plate M30	1x
76 Hex. Wood Screw DIN 571 6 x 20	4x

Assembly

1. Drill a suitable hole in the formlining (M30 = hole size \varnothing 32 mm)
2. Attach Anchor Positioning Plate M30 (**75**) to the rear side of the formlining matching the drilled hole using 4x hex. wood screws DIN 571 6 x 20 (**76**).
3. Insert the Positioning Screw M30 (**74**) from the rear side through the drilled hole.
4. Screw the Climbing Cone-2 M30/DW 20 (**70**) from the front side on the Positioning Screw M30 (**74**).
5. Screw Tie Rod DW 20 (**71**) onto the Climbing Cone-2 M30/DW 20 (**74**).
6. Screw the Threaded Anchor Plate DW 20 (**73**) onto the Tie Rod DW 20 (**71**).

Fig. B2.16

Fig. B2.17

For ensuring a secure position, fix the Threaded Anchor Plate DW 20 (**73**) to the reinforcement with wire.

Alternatively: Positioning Disc

- Firmly connect the Threaded Anchor Plate DW 20 (**73**) to the reinforcement with wire to ensure a secure position.
- Check all anchor components, assembly and position before concreting takes place.
- If possible, use the mounting with the positioning screw as the connection is more stable.

Components per climbing anchor

70 Climbing Cone-2 M30/ DW 20	1x
71 Tie Rod DW 20	1x
73 Threaded Anchor Plate DW 20	1x
77 Positioning Disc M30	1x
78 Wire Nail 3 x 80	6x

Fig. B2.18

Assembly

1. Nail the Positioning Disc M30 (**77**) to the front side of the formlining using 6x wire nails 3 x 80 (**78**).
2. Screw Climbing Cone-2 M30/DW 20 (**70**) on the Positioning Disc M30 (**77**).
3. Screw Tie Rod DW 20 (**71**) onto the Climbing Cone-2 M30/DW 20 (**70**).
4. Screw the Threaded Anchor Plate DW 20 (**73**) onto the Tie Rod DW 20 (**71**).

B2.7 Releasing the Leading Anchor

Preparation

Remove all connections, e.g. couplings, from the formwork elements of the adjacent climbing units.

Standard: Positioning Screw

Dismantling

1. Release Positioning Screws M30 (74) and remove.
2. Release the formwork using the heavy-duty spindle.
3. Strike formwork with adjusting unit or carriage (see B4.4 or B4.5).

Fig. B2.19

Alternatively: Positioning Disc

Dismantling

1. Straighten wire nails $\varnothing 3 \times 80$ (78).
2. Release the formwork using the heavy-duty spindle.
→ Pull wire nails $\varnothing 3 \times 80$ (78) out of the formlining.
3. Strike formwork with adjusting unit or carriage (see B4.4 or B4.5).
4. Bend wire nails $\varnothing 3 \times 80$ (78) in order to protect hands.
5. Remove Positioning Disc M30 (77) using Allen key SW 14.

Fig. B2.20

Fig. B2.21

B2.8 Mounting Ring

Components per Climbing Anchor

81 Mounting Ring SCS M30	1x
---------------------------------	----

Assembly

1. Screw in and tighten the Mounting Ring SCS M30 (**81**) in the Climbing Cone-2 M30/DW 20.

Dismantling

1. Release the Mounting Ring SCS M30 (**81**) and screw out.

Fig. B2.22

B2.9 Dismantling the Climbing Cones

- If necessary, the anchor hole can be closed using PERI Concrete Cones KK and a suitable adhesive.
- See User Information for Concrete Cones with Sealing Compound-3.

Dismantling

1. Release the Climbing Cone-2 M30/DW 20 (**70**)
2. Manually screw out the Climbing Cone-2 M30/DW 20 (**70**).

Fig. B2.23

Fig. B2.24

B3.1 Assembling the Formwork

Follow Instructions for Assembly and Use for GT 24 Girder Wall Formwork.

Mounting the strongbacks

1. Place strongbacks (9/10) on Steel Waler SRU and align roughly at the planned height h_F .
2. Fix Height Adjusting Unit-2 CB/SCS/RCS (102) on the strongbacks (9/10) using bolts $\varnothing 25 \times 180$ m and clamping sleeve $\varnothing 6$ (102.1) and secure with cotter pins 4/1 (102.2).
3. Ensure that there is a sufficient adjusting range available for the required formwork adjustment.
4. Spacer could need moving (see Section B3.6).
5. Mount Spindle Connector SCS $\varnothing 26-21$ (9.1) with $\varnothing 21$ hole downwards or Spindle Adapter SLS/RCS (105) at the planned height h_{Sp} .
6. Place strongbacks (9/10) on the formwork element so that the bracket arrangement in the ground plan can be maintained.
7. Fix strongbacks (9/10) to the Steel Waler SRU using Waler Fixation U100 – U120 (12).
8. Check strongback spacing and clamp strongbacks using Waler Fixation U100 – U120 (12).
9. Move the climbing unit (platform with formwork). If the crane lifting gear is spread apart, a compression brace must be installed between the strongbacks (9/10) (see Section B3.2).

Fig. B3.01

Fig. B3.01a

Fig. B3.01b

B3.2 Compression Brace

- If the crane lifting gear is spread apart, a compression brace must be installed between the strongbacks (9/10).
- Size of timber 14/14 cm or according to the planning specifications.
- Length of compression brace $L =$ bracket spacing $c - 96$ mm.

Components per side

49 Washer ISO 7094 200 HV, A 8	1x
107 Hex. Wood Screw DIN 571 8 x 160	1x

Assembly

1. Mount the compression brace between the strongbacks using 1x Hex. Wood Screw DIN 571 8 x 160 (107) and Washer ISO 7094 200 HV, A 8 (49) per strongback (9/10).

Attachment points and position

- Attach crane lifting gear to the top Spacer M20-82 of the strongback (9.2/10.1).
- If no compression braces can be used, the angle α is too small due to the bracket spacing or if the platforms are strongly asymmetrical, then the Lifting Beam 9 t must be used.
- Follow Instructions for Use for Lifting Beam 9 t.

Technical data

perm. F = 3.5 t (35 kN)

$c_{max} = 4.0$ m

$\alpha_{min} = 60^\circ$

Maximum cantilever e of compression brace and top edge of the strongback = 30 cm. (Fig. B3.02a)

Fig. B3.02

Fig. B3.02a

Fig. B3.02b

B3.3 Installing the Concreting Platform

Assembly

1. Lift concreting platform over the formwork element using textile straps and crane.
2. Insert concreting platform into the strongbacks (**9/10**).
3. Bolt Platform Beam SCS 120 (**17**) using 2x fitting pins $\varnothing 21 \times 120$ (**17.1**) per strongback (**9/10**) respectively and secure with cotter pins 4/1 (**17.2**). (Fig. B3.03)

Fig. B3.03

B3.4 Fixing the Formwork to the Bracket

Requirements:

The working platform must be correctly mounted and secured against lifting by means of locking pins. If necessary, install wind bracing to prevent tipping (see Section B2.5).

Assembly

1. Only SCS 250: retract carriage (2.1) and fix in position using fitting pins \varnothing 26 mm (see Section B4.5).
2. Turn back the sliding piece (2.11.1) in the Adjusting Unit SCS (see Section B4.4).
3. Adjust the Heavy-Duty Spindle SLS (11) to the required length and mount on the strongback using locking pin \varnothing 21 mm.
4. Attach crane lifting gear to the top spacer on the strongback, and move the formwork to the platform using the crane.
5. Mount strongbacks (9/10) in the sliding piece (2.11.1) on the Adjusting Unit using locking pins \varnothing 26 mm. The crane continues to carry the load.
6. If necessary, mount Reducing Bushing \varnothing 26 - 21 (103).
7. Vertically position the formwork, move the heavy-duty spindle (11) into the Spindle Connector SCS (2.1a) and mount using locking pins \varnothing 21 mm.
8. Release crane from all loads and remove crane lifting gear.
9. Align formwork (see Section B4). (Fig. B3.04)

Fig. B3.04

→
If the Heavy-Duty Spindle SLS is used, then 2 Reducing Bushings \varnothing 26 - 21 (103) must then be mounted in the spindle connector. Knock in Reducing Bushings with a hammer from the inside.

B3.5 Exchanging the Formwork

- Always follow the Instructions for Use of the respective load-carrying equipment!
- Remove load-bearing points from the formwork after the formwork has been exchanged. Otherwise, it may happen that the crane hooks are to be fastened there when moving the climbing unit.

Fig. B3.05

Requirements:

The working platform must be correctly mounted and secured against lifting by means of locking pins. If necessary, install wind bracing to prevent tipping (see Section B2.5).

Preparation

To ensure that the strongbacks remain stable at right angles with the concreting platform, the strongbacks must be reinforced.

1. Cut 2 pieces of scaffold tube (**97a**) to a length of 82 mm.
2. For 1 strongback above, for the other strongback below: release the bolt connection of the spacer (**9.4**) and dismantle the spacer tube.
3. Place the scaffold tube pieces over the spacer tube and re-assemble both parts in the strongback using bolts and nuts.
4. For diagonal bracing, screw 1 scaffold tube (**97**) to the scaffold tube pieces using Swivel Couplers DK 48/48 (**98**).

Fig. B3.06

5. Only SCS 250: retract carriage **(2.1)** and fix in position using fitting pins \varnothing 26 mm (see Section B4.5).
Only SCS 190: incline strongback to the rear (see Section B4.2).
6. Turn back the sliding piece **(2.11.1)** in the Adjusting Unit SCS (see Section B4.4).
7. Fix crane splices or other load-bearing points to the formwork. Attach crane lifting gear, and tension.

Exchanging the formwork

1. Open all Waler Fixations U100-120 **(12)** and dismantle.
2. Carefully lift the formwork with the crane.
3. Adapt or offset the Height Adjustment Unit **(102)** for the new formwork element.
4. Lift in new formwork element with the crane.
5. Lower the formwork waler onto the Height Adjusting Unit. The crane continues to carry the load.
6. Insert Waler Fixation U100-120 **(12)** and clamp the formwork element against the strongback.
7. Release crane from all loads and remove crane lifting gear.
8. Remove load-bearing points from the formwork.
9. Align formwork (see Section B4). (Fig. B3.07)

Fig. B3.07

B3.6 Spacers

It may be necessary to re-position the spacers in the strongbacks.

Re-positioning the Spacer M20

1. Undo Nut ISO 7040 M20-8 (9.4).
2. Remove Bolt ISO 4014 M20 x 130-8.8 (9.3).
3. Remove the tube sleeve of the Spacer M20-82 (9.2).
4. Re-position the tube sleeve with the help of a hammer to a $\varnothing 26$ hole.
5. Insert Bolt ISO 4014 M20 x 130-8.8 (9.3) through the tube sleeve of the Spacer M24-82 (9.2).
6. Fit Nut ISO 7040 M20-8 (9.4) onto the Bolt ISO 4014 M20 x 130-8.8 (9.3) and tighten (tightening torque = 240 Nm).

Fig. B3.08

Fig. B3.09

B4.1 Vertical Alignment

Tools

Ratchet Wrench 1/2"
Socket SW 19-1/2" L

Alignment

1. Slightly open the Waler Fixation U100 – U120 (**12**) or Waler Fixation-2 U100 – U120 (**13**).
2. Adjust the height of the formwork using the Adjusting Bolt (**102.3**) of the Height Adjustment Unit-2 CB/SCS/RCS (**102**).
3. Tighten the Waler Fixation U100 – U120 (**12**) or Waler Fixation-2 U100 – U120 (**13**).

For accurate alignment, place a spirit level on the formwork waler.

Fig. B4.01

B4.2 Aligning the Formwork Inclination

For large angles of inclination, the sliding piece in the adjusting unit might need re-adjusting.

Alignment

1. The inclination can be aligned by turning the Heavy-Duty Spindle.

- For accurate alignment, place a spirit level on the formwork waler.
- During assembly, pay attention to ensuring the same direction of rotation of the Heavy-Duty Spindles SLS. This can be ensured whereby the hole (**11.2**) is mounted below.

Fig. B4.02

B4.3 Horizontal Alignment

Tools

Hammer
Wrench SW 27

or

22 Tie Rod DW 15

Alignment

1. Slightly open the Waler Fixation U100 – U120 (**12**) or Waler Fixation-2 U100 – U120 (**13**) using a hammer or Tie Rod DW 15.
2. Move the formwork.
3. Tighten the Waler Fixation U100 – U120 (**12**) or Waler Fixation-2 U100 – U120 (**13**).

(Fig. B4.03)

Fig. B4.03

B4.4 Operating the Adjusting Unit

The Adjusting Unit SCS is used to position the formwork. The base of the formwork is pressed tightly against the previous concreting section.

When striking, the heavy-duty spindle is released first and then the adjusting unit is placed to the rear.

Tools

Ratchet Wrench
Socket Wrench SW 30

Adjusting the Adjusting Unit

Turn the Adjusting Bolt SW 30 (2.11.2) which allows the sliding piece (2.11.1) to be moved forwards and backwards. Adjusting range = ± 45 mm starting from the middle position. (Fig. B4.04)

In case there is insufficient space for the sliding piece to move as required, the adjusting unit must be re-positioned.

For SCS 190:

Secure the formwork against tipping. For this, attach crane lifting gear to the top walers and hold the formwork in position with the crane.

For SCS 250:

Move the carriage to the rear.

Fig. B4.04

B4.5 Operating the Carriage

The carriage is used for moving forward and retracting the formwork. As a result, this creates sufficient space for working in front of the formwork. The maximum retraction distance depends on the thickness of the formwork being used.

Max. retraction distance:

VARIO: $x_r = 64 \text{ cm}$

MAXIMO/TRIO: $x_r = 78 \text{ cm}$

Tools

Ratchet Wrench
Socket Wrench SW 19

Operating the Carriage

After the required concrete strength has been reached:

1. Release the heavy-duty spindle (**11**) and open the adjusting unit (**2.11**). The formwork is then released from the concrete.
2. Remove fitting pins (**2.8 + 2.10**) from the adjusting unit.
3. Turn the gearwheel drive (**2.2**) of the carriage using a ratchet wrench and Wrench Socket SW 19 thus allowing the carriage to be moved.
4. Bring the carriage (**2.1**) into the end position and insert fitting pins (**2.8 + 2.10**) into the adjusting unit.
5. For shuttering operations, move the carriage up to the previous concreting section. Then move it back to the nearest holes and position the adjusting unit with fitting pins (**2.8 + 2.10**).
6. Use the adjusting unit for pressing the formwork against the previous concreting section (see Section B4.4).

(Fig. B4.05 + B4.05a)

Fig. B4.05

Fig. B4.05a

B5.1 Platforms

Preparing recesses for hatches:

Installation takes place in the same way for all recesses.

Components

- 62a** Plank 1200 x 40 x 120 mm
- 44** TSS-Torx 6 x 80
- 50** Washer ISO 7094 100 HV, A 8
- 96** F.H. Bolt DIN 603 M8 x 100 MU

SCS 250

Arrangement on the guardrail-side platform beam (**36**), hatch opens on the wall side.

1. For installation, a 72 x 57 cm cut-out is made in the planking between the brackets. The platform beams must be mounted at the appropriate distance. Remaining plank width > 13 cm.
2. Support the cut planks with timbers (**36a**), L = 120 cm, min. 120 x 40 mm, and secure with TORX 6 x 80 (**44**).
3. Screw the timbers (**36a**), 2x respectively, to the laterally continuous planks using bolts M8 x 100 (**96**), nuts and washers (**50**). (Fig. B5.01)

Fig. B5.01

SCS 190

- With the Bracket SCS 190, a hatch can only be mounted if there are no platform beams in the middle.
- Provide separate statical proof for the platform beams.
- Install hatch directly next to the bracket. As a result, the ladder descent is between the horizontal and diagonal scaffold tube bracing of the bracket unit. (Fig. B5.02a)
- Hatch opens on the wall side

Dimensions according to Fig. B5.02.
 Assembly takes place in the same way as for the SCS 250.

Fig. B5.02

Fig. B5.02a

B5.2 Mounting the Concreting Platform Hatch

- Minimum plank width 120 mm.
- Install the hatch in the middle of the platform.

For the transition area between the platforms, hatches must be mounted.

Components

45 TSS-Torx 6 x 40	20x
82 Hatch RCS 55 x 60-2, foldable	1x
alternatively:	
Hatch 55 x 60, foldable	1x
Sliding Hatch Cover*	1x

*Attention! The recess of the sliding hatch in the decking has a different size. Details are available on request.

Preparation

1. Cut recess 72 x 57 cm between the crossbeams in the planking. Remaining planking width on crossbeam: 10 cm.
(Fig. B5.03)

Fig. B5.03

Assembly

1. Place Hatch RCS 55 x 60-2, foldable (**82**) in the prepared recess. The opened hatch cover (**82.1**) points towards the wall side. (Fig. B5.04a)
2. Secure frame of the hatch and decking using approx. 16x TSS Torx 6 x 40 (**45**) (**2 per plank**). (Fig. B5.04b)

Mount hatches and access ladders on the corner platforms.
 → Free access to the hatch is possible.

Fig. B5.04a

Fig. B5.04b

B5.3 Ladder Platform for the Finishing Platform

- Take the ladder platform into consideration when assembling the finishing platform (see Section B1.6).
- Clear internal dimensions of the ladder platform: min. 90 cm!

Components

- 36** Lattice Girder GT 24
- 40** Cross Connector GT 24/GT 24
- 42** Hex. Wood Screw DIN 571 8 x 60
- 45** TSS-Torx 6 x 40
- 49** Washer ISO 7094 200 HV, A 8
- 50** Washer ISO 7094 100 HV, A 8
- 54** Angle Bracket 90° reinforced
- 57** Guardrail Post RCS 150
- 59** Guardrail Post Holder Multi
- 68** Screw-On Coupling-2 D48-M20
- 69** L-Angle RCS 120 x 120 x 200
- 96** F.H. Bolt DIN 603 M8 x 100 MU
- 98** Swivel Coupling DK 48/48
- 101** TSS-Torx 6 x 60

Assembly

- For the platform joint, push the cross connectors (**40**) into the chords of the platform beam, position them and screw tightly into the slotted holes using 4 screws 6 x 40 (**45**) respectively.
- Slide the Lattice Girder GT 24, L = 1.80 m (**36**) onto the cross connector, move into position and screw tightly into the slotted holes using 4 screws 6 x 40 (**45**) respectively.
- Mount the Guardrail Post Holder Multi (**59**).

Mount the cross connector only in the area where the girder chord is undamaged.
Load-bearing capacity: see Product Information PI 405.

The claws of the cross connector must rest in the chord of the girder. There is a 10 mm gap between the lattice girders if correctly installed.

Fig. B5.05

Fig. B5.05a

4. Fill the lattice structure of the Lattice Girder GT 24, L = 0.90 m (36b) with formlining strips (37) (300 x 120 x 26) up to the width of the chord.
5. Pre-drill (Ø 8 mm) the prepared lattice girder and attach it to the guardrail post holder (59) with bolts M8 x 100 (96), washers (49) and nuts.
6. Fill the chord of the lattice girder with 10 mm thick wooden strips.
7. Cut planking to required length and mount on each platform beam using 2 screws 6 x 60.
8. Mount Guardrail Posts SCS (57) on the guardrail post holders.
9. Attach scaffold tube Ø 48 to the Guardrail Post SCS.
10. Position L-Angle RCS (69) and pre-drill planking 2x with Ø 6 mm.
10. Mount L-Angle on planking using 2x wood screws 8 x 60 (42) and washers (50) respectively.
11. Mount screw-on coupling (68) on L-Angle RCS.
12. Mount guardrails consisting of scaffold tubes Ø 48 mm and swivel couplers (98) along the complete length of the platform and ladder platform.
13. Mount toe boards on the planking using angle connectors (54) and screws 6 x 40 (45).

(Fig. B5.05 – B5.07)

Take into consideration the guardrail dimensions. (Fig. B5.06 + B5.07)

Fig. B5.06

Fig. B5.07

B5.4 Ladders

Do not use the ladder until it is securely attached at the top and bottom, and the ladder safety cage has been mounted.

Tools

- Ratchet Wrench
- Socket Wrench SW 19
- Ring/Open-End Wrench SW 19

Components

- 45** TSS-Torx 6 x 40
- 83** Bolt ISO 7014 M12 x 40-8.8
- 84** Nut ISO 7040 M12-8
- 85** Ladder 180/6
- 86** Ladder 220/6
- 88** Ladder Base 30, adjustable
- 91** Ladder Safety Cage 75
- 92** Ladder Safety Cage 150

Pre-assembly of ladder

- Permanently mounted ladder:
 1. Push top Ladder 220/6 (**86**) with the connector (**86.1**) as far as possible into the bottom Ladder 180/6 (**85**).
 2. Secure the bottom ladder to the connector using the 4x bolts M12 x 40 and nuts (**86.2**) which have been provided.
 3. Fix ladder base (**88**) to the connector on the bottom ladder in the same way using 4x bolts M12 x 40 and nuts. (Fig. B5.08)

Fixing the ladder base

1. Pull out the bracket (**88.1**) of the ladder base (**88**) as far as the platform decking. Secure bracket to the platform decking using 3x TSS Torx 6 x 40 screws (**45**).

Fig. B5.08

Fig. B5.09

The rungs of the hook-in ladder and top ladder must be positioned at the same height. Otherwise secure the ladder hooks using the correct holes.

Fig. B5.10

■ Bottom ladder as hook-in ladder:

1. Secure ladder hook (90) to the 2 bottom holes on the ladder rail using 4x bolts M12 x 25 and nuts (90.1) which have been provided.
 2. Securely mount the ladder base (88). See above.
 3. Attach hook-in ladder to the top ladder.
- (Fig. B5.09 + B5.10)

Fig. B5.11

Attaching the ladder to the hatch

1. Lift ladder using the crane. Lower ladder through hatch opening (82).
2. Fix ladder to the hatch from above using 2x bolts M12 x 40 and nuts (83 + 84). (Fig. B5.11)

Fig. B5.12

Attaching the End Ladder 180/2

1. Open hatch cover (82.1).
 2. Lift pre-assembled ladders (85 + 87) with the crane into the hatch (82) and lower so that the top rung of the ladder lies in the U-profile of the hatch.
- (Fig. B5.12)

Fig. B5.13

Mounting the ladder safety cage

- The distance from the platform decking to the ladder safety cage ranges from 2.2 m to 3.0 m.
- The opening between 2 ladder safety cages must not exceed 50 cm.

1. Bring and hold the ladder safety cage (91) in position using a rope.
 2. Slightly loosen 4x bolts M12 x 25 on the clamping plate (91.1), position clamping plate on the ladder rail (86), turn and tighten bolts.
- (Fig. B5.13)

Pos.	Name	Concreting height h_b in [m]			
		4.00	6.00		
		Spacing between the decking in [m]	4.052	3.177	6.427
		Qty			
82	Hatch 55 x 60-2, foldable	1	1	1	
85	Ladder 180/6	2 (2)	2 (2)	4 (4)	
90	Ladder Hook	- (2)	2	2	
88	Ladder Base 30, adjustable	1	1	1	
92	Ladder Safety Cage 150	1	-	2	
91	Ladder Safety Cage 75	-	1	-	
87	End Ladder 180/2	(1)	(1)	(1)	

Numbers in brackets indicate the combination with the End Ladder 180/2.

B6.1 Climbing Procedure

Moving

Preparation

Fig. B6.01

Fig. B6.02

Mounting

Fig. B6.03

Finishing work

Fig. B6.04

Warning

Leading edges are created during the moving procedure!

Falling from the structure.

⇒ When working on leading edges, use PPE to prevent falling.

- Use a guide rope to ensure that the moving procedure is fully under control. (Fig. B6.05)
- Secure or cordon off leading edges during the climbing procedure.
- Plan access ways and respective sequences to ensure that safe escape routes are available at all times for all site personnel on the climbing units.
- Transporting site personnel is forbidden.
- Do not transport any loose materials or other loads.

Fig. B6.05

Never attach crane lifting gear to the formwork. (Fig. B6.06a)

- When using 2-sling lifting gear, a compression brace must be installed between the strongbacks (see Section B3.2).
- Determine the load centre of gravity so that the climbing unit tilts approx. 1 – 2° with the trailing platform to the building when being lifted, e.g. through trial and error.

Fig. B6.06a

Fig. B6.06b

Preparation

1. Remove all connection elements and couplings from the formwork elements of the adjacent climbing units.
2. Fix Mounting Ring M30 (81) to the leading anchor.
3. Release wind bracing and remove the wall connection.
4. Remove climbing cone from the finishing platform and close anchor holes where required.
5. Remove all loose components from the climbing unit.

Moving

1. At the top, attach the crane lifting gear to the strongback.
2. Move securing pins to the climbing position and leave the platform (see Section B6.2).
3. Lift climbing unit out of the mounting ring. The pressure point should be approx. 5 – 10 cm away from the wall. If the bracket jams, correct the formwork inclination accordingly.
4. Lift climbing unit to the next climbing anchor.

Mounting

1. Lower the crossbeam and attach to the mounting ring.
2. Enter platform and bring securing pins into the securing position (see Section B6.2).

Are both crossbeam heads suspended in the corresponding mounting rings?

Troubleshooting

- If installation in the mounting ring is unsuccessful or the bracket jams, lift the platform and lower again.
- If the bracket spacing does not match that of the mounting rings, check the distance of the leading anchor to the formwork.
- If the mounting procedure is not possible, the bracket spacing must be corrected through re-assembling the platform.

Finishing work

1. Remove crane lifting gear.
2. Remove mounting ring used in the last cycle from the climbing anchor of the finishing platform.
3. If necessary, mount wind bracing on the climbing cone used in the last cycle from the finishing platform.
4. Mount the leading anchor for the next cycle on the formlining (see Section B2.6).

B6.2 Securing Pins

Securing pins in the securing position

During work operations on the climbing bracket, the brackets must be secured to prevent lifting with securing pins (2.3) in the securing position under the mounting rings (81).

In addition to the side limit-stop plates (2.5), the bolts must be secured with a cotter pin on the opposite side (Fig. B6.07 + B6.07a)

The securing pin is in the securing position when in the transport and storage position of the Crossbeam Unit SCS.

Fig. B6.07

Fig. B6.07a

Securing pins in the climbing position

During the climbing procedure, the securing pins (**2.3**) are stored in the climbing position. The cotter pins are inserted into the shaft of the securing pins. (Fig. B6.08 + B6.08a)

During the mounting procedure, the pins must not collide with the mounting ring (**81**).

Fig. B6.08

Fig. B6.08a

Warning

Leading edges are created during the moving procedure!

Falling from the structure.

- ⇒ These areas must be cordoned off or secured using other suitable measures.
- ⇒ When working on leading edges, use PPE to prevent falling.

B7.1 Formwork

- Environmentally-friendly disposal of non-recyclable material in accordance with regulations.
- Re-attach relevant connection means (screws, fitting pins, etc.) of the individual PERI items as indicated in the programme overview.

Dismantling

1. Strike the formwork.
2. Attach crane lifting gear to the strongbacks (**9/10**).
3. Tension the crane lifting gear.
4. Remove fitting pins \varnothing 21 from the Heavy-Duty Spindle SLS (**11**) and spindle in the Heavy-Duty Spindle SLS.
5. Remove fitting pins \varnothing 26 mm from the Adjusting Unit SCS (**2.11**) and lift the strongback with the crane.
6. Set down formwork unit on dismantling area and disassemble. (Fig. B7.01)

Fig. B7.01

B7.2 Guardrails and Start Roller

Follow Instructions for Use for the Crane Eye CB 240-2 0.7 t.

Dismantling

1. If necessary, dismantle the wind bracing.
2. Dismantle Start Roller ACS (**15**).
3. Mount Crane Eye CB 240-2 0.7 t (**95**) in the top holes of the Guardrail Post SCS 150 (**57**).
4. Attach crane lifting gear to the crane eye (**95**) and tension.
5. Remove Bolts ISO M20 x 120-8.8 (**2.6**) and Nuts ISO 7040 M20-8 (**2.7**).
6. Set guardrail unit down on dismantling area and take apart. (Fig. B7.02)

Fig. B7.02

B7.3 From the building

1. Remove 2x fitting pins \varnothing 26 (**2.8**) and cotter pins 5/1 (**2.9**) from the marked positions on the Adjusting Unit SCS (**2.11**).
2. Insert fitting pins \varnothing 26 (**2.8**) into the holes on the crossbeam and secure with cotter pins 5/1 (**2.9**).
3. Attach crane lifting gear to the fitting pins.
- (Fig. B7.03)
4. Move securing pins to the climbing position and leave the platform (see Section B6.2).
5. Lift platform unit out of the Mounting Rings (**81**) and set down on the dismantling area. (Fig. B7.04)
6. Lower the finishing platform first and place the bracket unit forward on the dismantling support (**260/250 mm**). (Fig. B7.05)
7. Dismantle the climbing anchor from a safe working position.

Fig. B7.03

Fig. B7.04

B7.4 Platform Unit

Dismantling the finishing platform

1. Secure bracket against tipping.
2. Dismantle the guardrail unit.
3. Attach rear end of the finishing platform to the crane lifting gear and tension.
4. Remove fitting pins from the Platform Beam SCS 120 (16) and lift out the finishing platform.
5. Dismantle the scaffold tube bracing on the Platform Post Double SCS 232 (18).
6. Remove Platform Post Double SCS 232 (18) from the Vertical Strut SCS 237 (7).

(Fig. B7.05)

Fig. B7.05

Dismantling the working platform

1. Protect bracket against tipping.
2. Attach Crossbeam Unit SCS (1/2) to the crane lifting gear.
3. Dismantle bracket.
4. Move securing pins (2.3) to the securing position (see Section B6.2).
5. Lower the Crossbeam Unit SCS (1/2).

(Fig. B7.06)

Fig. B7.06

Dismantling the decking

1. Dismantle planking (55) on platform beam (36).
2. Dismantle platform beam (36).
3. Dismantle Platform Beam Support SCS (3) or Platform Beam Support RCS (6).

(Fig. B7.07)

Fig. B7.07

C1.1 General

Climbing units are fixed to circular structures using the Angle Adapter SCS and Swivel-Mounted Pressure Point SCS.

This ensures that the brackets of the platform are in a parallel position and the formwork can be retracted with the carriage.

The Angle Adapter SCS and Swivel-Mounted Pressure Point SCS can be mounted on the Crossbeam Unit SCS 190 and SCS 250 in the same way.

Limits of use

Angle Adapter SCS and Swivel-Mounted Pressure Point SCS:

Max. angle β structure/bracket axis: $\pm 15^\circ$. (Fig. C1.01 + C1.01a)

Connect Brackets SCS as of angle β building structure/bracket axis $> 7.5^\circ$ to the Swivel-Mounted Pressure Point SCS by means of timbers (see Section C1.3).

Fig. C1.01

Fig. C1.01a

C1.2 Angle Adapter SCS

Components:

1	Crossbeam Unit SCS 190	2x
1.3	Locking Pin 25x200 SCS	2x
1.9	Cotter Pin 5/1	2x
1.10	Head Plate	2x
1.11	Securing Plate	2x
7	Vertical Strut SCS 237	2x
108	Angle Adapter SCS	2x
108.1	Locking Pin 25x200 SCS	2x
109	Swivel-Mounted Pressure Point SCS	2x

Assembling the Angle Adapter

1. Remove locking pins (**1.3**) from the Crossbeam Unit (**1**).
2. Mount Angle Adapter (**108**) from below in the Crossbeam Unit. In the process, insert the sleeve of the Angle Adapter behind the head plate (**1.10**) of the Crossbeam Unit (**1**).
3. Insert locking pin (**1.3**) through the hole on the Crossbeam Unit and sleeve of the Angle Adapter.
4. Secure locking pins on the Crossbeam Unit (**1.3**) by means of cotter pins (**1.9**).
5. Turn down the hand grip of the locking pin behind the securing plate (**1.11**) of the Crossbeam Unit.

(Fig. C1.02)

The locking pins of the crossbeam unit and angle adapter are not interchangeable and can be distinguished as follows:

locking pin for the crossbeam unit:
dowel pin protrudes on 1 side.

locking pin for the angle adapter:
dowel pin protrudes on both sides,
hand grip is rectangular.

Fig. C1.02

Fig. C1.02a

Fig. C1.02b

C1.3 Swivel-Mounted Pressure Point

Assembly

1. Slide the swivel-mounted pressure point (**109**) onto the vertical strut.
2. Secure the swivel-mounted pressure point using bolts M24 x 130 (**109.1**) and nuts M24 (**109.2**).

Fig. C1.03

Fig. C1.03a

Fig. C1.03b

Additional measure for angle $\beta > 7.5^\circ$

For force transfer of the horizontal components into the structure, a friction coefficient $\mu \geq 0.2$ (steel/concrete) must be present at the contact point between the base of the bracket and building.

For larger angles β or smaller friction coefficients, connect Brackets SCS by means of timbers.

Fig. C1.04

Assembly

1. Pre-drill timbers (\varnothing 13 mm) for bolts M12.
2. Pre-drill timbers for the screw heads (**109.1**) using a Forstner drill \varnothing 42. Drilling pattern: see Fig. C1.04c.
3. Secure timber 10/10 with bolts M12 x 140, washers A12 and nuts M12 which have been provided with the swivel-mounted pressure point. (Fig. C1.04 – C1.04b)

Fig. C1.04a

Fig. C1.04b

Fig. C1.04c

C1.4 Climbing Procedure

Warning

Never remove the locking pins from the Crossbeam Unit (**1.3**)! Otherwise the Angle Adapter will fall out and can cause a serious injury to site personnel positioned below!

⇒ Secure locking pins to prevent them being accidentally pulled out!

Fig. C1.05

Mounting the Climbing Unit

1. Slightly swing the Climbing Unit against the building just above the Mounting Ring SCS.
→ Angle Adapter rotates in the existing building angle.
2. Lower the Climbing Unit into the Mounting Ring.

Have both Angle Adapters been completely and correctly attached to the Mounting Ring?

3. Enter platform and bring the locking pins (**108.1**) in the securing position so that the Climbing Unit cannot lift off.

Fig. C1.05a

Only use the locking pin for the Angle Adapter. Only this fits through the key-holes (**108.3**) of the Angle Adapter and can be locked in the securing position.

The locking pins of the Crossbeam Unit and Angle Adapter are not interchangeable and can be distinguished as follows:

locking pin for the Crossbeam Unit (**1.3**): dowel pin protrudes on 1 side.

locking pin for the Angle Adapter (**108.1**):
dowel pin protrudes on both sides,
hand grip is rectangular.

On building corners, ensure that there is secure access to the next platform. For this, the platform is cantilevered together with mitred joints.

Select cantilever and mitre so that, on the one hand, movement to the next platform is possible at any time and, on the other, the platform cantilever is not too large.

Components

36	Platform Beam
36a	Timbers
44	TSS-Torx 6 x 80, galv.
54	Angle Bracket 90°
55	Planking
57	Guardrail Post RCS 150
59	Guardrail Post Holder Multi
62	Plank L x 40 x 120 mm

Fitting the platform planking

1. Push Platform Beam (**36**) up to the mitre.
2. Planking (**55**) is mitred accordingly.
3. In the mitred area, reinforce the planking (**55**) from below using timbers (**36a**). Securely fix timbers (**36a**) through the planking (**36**) using Torx 6 x 80 (**44**).

Pay attention to lifting forces on the other side of the platform. Ensure that all platform beams are adequately fixed to the crossbeam.

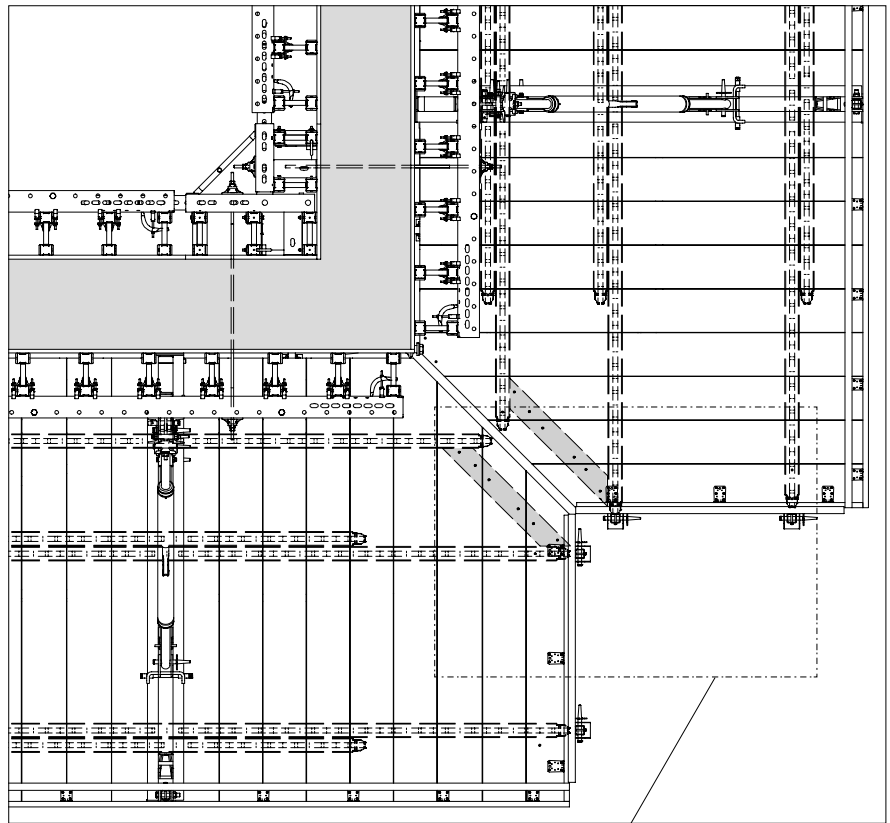

Fig. C2.01

Fig. C2.01a

Assembly of guardrails

For detailed assembly instructions: see Section B1.8.

1. Secure the Guardrail Post Holder Multi (**59**) to the Platform Beam (**36**).
 2. Insert Guardrail Post SCS 150 (**57**) and securely fix in position.
 3. Install planks (**62**) as guardrail boards.
 4. Mount toe boards (**56**) to the planking using angle connectors.
- (Fig. C2.02)

Fig. C2.02

A Climbing Rail RCS can be installed as a strongback instead of a Strongback SCS.

Project-specific planning and dimensioning is required!

Components

- 11** Heavy-Duty Spindle SLS
- 102** Height Adjustment Unit-2 CB/SCS/RCS
- 104** Spindle Adapter SLS/RCS
- 105** Adapter for Adjusting Unit RCS/SCS
- 113** Anchor Plate RCS DW 20
- 114** Wingnut DW 15, galv.
- 115** Wingnut Counterplate DW 15, galv.
- 116** Climbing Rail RCS
- 117** Tie Rod DW 15

Assembly

1. Mount Height Adjustment Unit-2 CB/SCS/RCS (**102**) on the Climbing Rail RCS (**116**) using the bolts \varnothing 25 mm and cotter pins 4/1 which are included in the delivery.
 2. Mount the Adapter for Adjusting Unit SCS/RCS (**105**) on the climbing rail using locking pins 2 x \varnothing 21 mm and 2 x \varnothing 26 mm as well as cotter pins 4/1 and 5/1 which are included in the delivery.
 3. Mount the top side of the Heavy-Duty Spindle SLS (**11**) with the Spindle Adapter (**104**) to the climbing rail.
 4. Mount each formwork waler with Tie Rod DW 15 (**117**), Wingnut DW 15 (**114**), Anchor Plate DW 20 (**113**) and Wingnut Counterplate DW 15 (**115**) to the climbing rail.
 5. Transport the formwork to the SCS Platform using the crane.
 6. Mount the Adapter for Adjusting Unit (**105**) on the Adjusting Unit (**2.11**) using locking pins \varnothing 26 mm and cotter pins 5/1.
 7. Mount the bottom side of the Heavy-Duty Spindle SLS (**11.1**) with Reducing Bushing \varnothing 26 - 21 (**103**), fitting pin \varnothing 21 mm and cotter pin 4/1 on the Crossbeam Unit (**2**).
- (Fig. C3.01 – C3.01b)

Fig. C3.01

Fig. C3.01b

C4.1 TRIO/MAXIMO Panel with Formwork Waler 150 CB

For static reasons, the U-profile of the Formwork Waler 150 CB must be pointing upwards. (Fig. C4.05)

- Project-specific planning and dimensioning is required!
- The Formwork Waler 150 CB (**110**) is attached to the Clamp Adapter MX/TR - SRU (**112**) as standard by means of the Tie Rod DW 15 (**112.3**) and Wingnut Counterplate DW 15 (**112.4**). (Fig. C1.16a)
If the Wingnut Counterplate DW 15 (**112.4**) collides with the strongback, the Clamp Adapter MX/TR - SRU (**112**) can be secured using fitting pins $\varnothing 21 \times 120$ (**84.2**) and cotter pins 4/1.
- Assembly on the Strongback SCS 325 and 550 takes place in the same way.

Components

-
- 9** Strongback SCS
 - 12** Waler Fixation U100 - 200
 - 102** Height Adjustment Unit-2 CB/SCS/RCS
 - 110** Formwork Waler 150 CB
 - 112** Clamp Adapter MX/TR-SRU
alternatively
 - 99** Fitting Pin $\varnothing 21 \times 120$
 - 100** Cotter Pin 4/1
-

Fig. C4.01

Fig. C4.02

Assembly of Formwork Waler 150 CB on the TRIO/MAXIMO Panel

1. Assemble TRIO/MAXIMO Panels on the assembly area to create formwork units.
2. Fix 2x Clamp Adapter MX/TR - SRU (112) to the formwork using bolts ISO 4014 M24 x 80-8.8 (112.1) and nuts ISO 4032 M24-8 (112.2). (Fig. C4.03a)
3. Place the Formwork Waler 150 CB (110) with U-profile pointing upwards on the Clamp Adapter MX/TR-SRU (112).

Fig. C4.03a

4. Brace the Formwork Waler 150 CB (110) on the formwork using Tie Rod DW 15 (112.3) and Wingnut Counterplate DW 15 (112.4). (Fig. C4.03b)

Fig. C4.03b

Alternatively: mount Formwork Waler 150 CB on the Clamp Adapter MX/TR - SRU using fitting pins $\varnothing 21 \times 120$ (99) and secure with cotter pins 4/1 (100).

5. Position the strongback (9) on Formwork Waler 150 CB (110) according to the bracket spacing, and secure. Bottom projecting length: see project drawing or Section C1.

Fig. C4.04a

6. Mount Waler Fixation U100 – U120 (12) and secure in position by tightening the quick jack nut. (Fig. C4.04a + C4.04b)

Fig. C4.04b

- Does the U-profile of the Formwork Waler 150 CB point upwards? (Fig. B2.25a + B2.25b)
- Does the Formwork Waler 150 CB rest against the vertical profiles of the formwork?

Fig. C4.05

SCS Double-Sided

Art no. Weight [kg]

118737 140.000 **Crossbeam SCS 250**

Platform Beam for climbing brackets with Adjusting Unit SCS and Carriage SCS to work for retracting the formwork.

Notes

Wrench Size Carriage SW19, Adjusting Unit SW30.

Accessory (not included)

- 118710 Vertical Strut SCS 237
- 118714 Diagonal Strut SCS 257
- 118579 Guardrail Post SCS 150

Included in delivery

- 118690 Carriage SCS 1 pc
- 118575 Adjusting Unit SCS 1 pc
- 104477 Screw ISO4014-M20x120-8.8-ga 2 pc
- 781053 Nut ISO7040-M20-8-ga 2 pc
- 123692 Lock Pin $\text{Ø}25 \times 200$ mm SCS coat 1 pc
- 022230 Cotter Pin 5/1 ga 1 pc

SCS Double-Sided

Art no.	Weight [kg]	
118730	96.700	Crossbeam SCS 190

Platform Beam for climbing brackets with Adjusting Unit SCS to prevent tipping of the formwork.

Notes

Wrench Size Adjusting Unit SW30.

Accessory (not included)

- 118710 Vertical Strut SCS 237
- 118714 Diagonal Strut SCS 257
- 118579 Guardrail Post SCS 150

Included in delivery

- 118575 Adjusting Unit SCS 1 pc
- 104477 Screw ISO4014-M20x120-8.8-ga 2 pc
- 781053 Nut ISO7040-M20-8-ga 2 pc
- 123692 Lock Pin $\text{Ø}25 \times 200 \text{ mm}$ SCS coat 1 pc
- 022230 Cotter Pin 5/1 ga 1 pc

Art no.	Weight [kg]	
118710	45.800	Vertical Strut SCS 237

Vertical tension strut of the climbing bracket for support heights of 2.58 m and 2.40 m.

Included in delivery

- 711078 Screw ISO4014-M20x130-8.8-ga 4 pc
- 781053 Nut ISO7040-M20-8-ga 4 pc

SCS Double-Sided

Art no. Weight [kg]

118714 41.000 **Diagonal Strut SCS 257**

Diagonal compression strut of the climbing bracket.

Included in delivery

- 017040 Screw-On Coupler DK 48 ga 2 pc
- 125999 Screw M30x140mm-8.8 coat 2 pc
- 725119 Nut ISO7040-M30-8-ga 2 pc

Art no. Weight [kg]

118579 6.280 **Guardrail Post SCS 150**

Guardrail post to connect handrail boards and toeboards.

Accessory (not included)

- 113762 Guardrail Conn. Plate ACS/SCS
- 051160 Handrail Connector CB

SCS Double-Sided

Art no.	Weight [kg]	
131279	19.700	Angle Adaptor SCS

For parallel bracket arrangement in circular structures. For single- and double-sided application.

Included in delivery

131252 Lock Pin Ø25x200mm SCS coat 1 pc

Art no.	Weight [kg]	
129747	11.800	Pressure Point pivoted SCS

For supporting round structures in combination with Angle Adapter SCS.

Art no.	Weight [kg]	
118584	112.000	Strongback SCS 325

Strongback with Spindle Connector SCS to support the formwork.

Accessory (not included)

- 051030 Height Adjusting Unit CB/SCS
- 110059 Waler Fixation U100/U120

Included in delivery

118580 Spindle Connector SCS Ø26/21mm 1 pc

SCS Double-Sided

Art no.	Weight [kg]	
110022	0.491	Spacer M20x82mm

Spacer for Climbing Rails RCS.

Included in delivery

104477 Screw ISO4014-M20x120-8.8-ga 1 pc
130341 Nut ISO7042-M20-8-ga 1 pc

Art no.	Weight [kg]	
129689	6.960	Height Adj. Unit-2 CB/SCS/RCS

For height adjustment of RUNDIFLEX Panels on the Strongbacks CB/RCS/SCS.

Included in delivery

715936 Pin with Clamping Sleeve 1 pc
018060 Cotter Pin 4/1 ga 1 pc

Art no.	Weight [kg]	
110059	2.840	Waler Fixation U100/U120

For fixing VARIO GT 24 Panels to Strongbacks CB, SCS and Steel Waler SRU.

Included in delivery

110055 Cross Strap coat 1 pc
118260 Spherical Nut RD16 coat 1 pc

Art no.	Weight [kg]	
129720	8.040	Waler Fixation U100/U120 doub.

For fixing VARIO GT 24 Panels to Strongbacks CB, SCS, Steel Waler SRU if anchoring is done through the strongback.

Included in delivery

118260 Spherical Nut RD16 coat 2 pc

SCS Double-Sided

Art no. Weight [kg]

129674	178.000	Strongback SCS 550
--------	---------	---------------------------

Strongback for supporting the formwork for double-sided application and formwork heights up to 6 m.

Art no. Weight [kg]

min. L [mm] max. L [mm]

Heavy-Duty Spindles SLS

Art no.	Weight [kg]	Heavy Duty Spindle SLS	min. L [mm]	max. L [mm]
111035	12.000	Heavy Duty Spindle SLS 40-80	400	800
101773	15.300	Heavy Duty Spindle SLS 80-140	800	1400
101774	18.300	Heavy Duty Spindle SLS 100-180	1000	1800
101776	24.900	Heavy Duty Spindle SLS 140-240	1400	2400
101778	32.300	Heavy Duty Spindle SLS 200-300	2000	3000
101779	38.500	Heavy Duty Spindle SLS 260-360	2600	3600
109726	44.800	Heavy Duty Spindle SLS 320-420	3200	4200
109785	51.000	Heavy Duty Spindle SLS 380-480	3800	4800

Used as adjustable spindle for truss beams made of Steel Walers SRU and Climbing Rails RCS.

Notes

Permissible load see PERI Design Tables, Type Test is available.

Accessory (not included)

110477	Spindle Adaptor SLS/RCS
104031	Fitting Pin Ø21x120mm
018060	Cotter Pin 4/1 ga

SCS Double-Sided

Art no. Weight [kg]

118585 46.300 **Heavy Duty Spindle SCS 198-250**

Adjustable diagonal strut to support the strongback.

Included in delivery

111567 Fitting Pin Ø26x120mm 2 pc

022230 Cotter Pin 5/1 ga 2 pc

Art no. Weight [kg]

129695 0.028 **Reducing Sleeve Ø26/Ø21mm ga**

For reducing the hole diameter from Ø 26 to Ø 21 mm in fitting pin connections.

Art no. Weight [kg]

129772 25.600 **Platform Beam SCS 120**

For use as finishing and concreting platform for double-sided application of SCS Climbing Bracket.

Accessory (not included)

118579 Guardrail Post SCS 150

Included in delivery

104031 Fitting Pin Ø21x120mm 2 pc

018060 Cotter Pin 4/1 ga 2 pc

SCS Double-Sided

Art no. Weight [kg]

129708 50.100 **Platform Post Double SCS 232**

For mounting finishing platforms for double-sided application of SCS Climbing Bracket.

Accessory (not included)

- 129699 Scaffold Tube Connector SCS 48
- 129707 Plattform Post Connector SCS
- 129772 Platform Beam SCS 120

Included in delivery

- 118578 Platform Post SCS 232 2 pc
- 129704 Spacer M20-102 2 pc
- 104031 Fitting Pin Ø21x120mm 2 pc
- 018060 Cotter Pin 4/1 ga 2 pc

Art no. Weight [kg]

129707 9.560 **Plattform Post Connector SCS**

For mounting and additional Platform Post Double SCS 232 for formwork heights > 3.9 m up to 6 m.

Included in delivery

- 017040 Screw-On Coupler DK 48 ga 1 pc
- 104031 Fitting Pin Ø21x120mm 2 pc
- 018060 Cotter Pin 4/1 ga 2 pc

SCS Double-Sided

Art no. Weight [kg]

129704 0.645 **Spacer M20-102**

Spacer for Platform Post Double SCS 232.

Art no. Weight [kg]

129699 1.950 **Scaffold Tube Connector SCS 48**

For stiffening Platform Post Double SCS 232 with Scaffold Tubes Ø 48 mm.

Included in delivery

104031 Fitting Pin Ø21x120mm 1 pc
018060 Cotter Pin 4/1 ga 1 pc

Art no. Weight [kg]

129778 1.440 **Platform Post Stop SCS**

Temporary stopper of finishing platform during moving in the first standard cycle.

Included in delivery

109612 Screw ISO4014-M24x130-8.8-ga 1 pc
105032 Nut ISO7040-M24-8-ga 1 pc

Art no. Weight [kg]

127099 12.000 **Adapter Adjusting Unit SCS/RCS**

Adapter for using a Climbing Rail RCS as Strongback with SCS Climbing System.

Included in delivery

104031 Fitting Pin Ø21x120mm 2 pc
111567 Fitting Pin Ø26x120mm 2 pc
018060 Cotter Pin 4/1 ga 4 pc

SCS Double-Sided

Art no.	Weight [kg]	
110477	3.990	Spindle Adaptor SLS/RCS

For connecting the Heavy-Duty Spindle SLS to the Climbing Rail RCS.

Accessory (not included)

104031	Fitting Pin Ø21x120mm
018060	Cotter Pin 4/1 ga
111567	Fitting Pin Ø26x120mm
022230	Cotter Pin 5/1 ga

Included in delivery

104031 Fitting Pin Ø21x120mm 1 pc
018060 Cotter Pin 4/1 ga 1 pc

Art no.	Weight [kg]	
127821	0.957	Crane Eye-2 CB 240 0.7t

For assembly on the Climbing Bracket CB 240 when used as working scaffold.

Notes

Follow Instructions for Use!
Permissible load-bearing capacity 700.0 kg.

Included in delivery

128335 Screw ISO4014-M16x110 mach 1 pc
126248 Castle-Nut DIN935-M16-8-ga 1 pc
722825 Split pin ISO1234-4x30-St 1 pc

Art no.	Weight [kg]	
104031	0.462	Fitting Pin Ø21x120mm

For different connections. High strength.

Accessory (not included)

018060	Cotter Pin 4/1 ga
--------	-------------------

SCS Double-Sided

Art no.	Weight [kg]	
018060	0.014	Cotter Pin 4/1 ga

Art no.	Weight [kg]	
057417	4.080	Supporting Roller ACS

As guiding for working platforms at the building wall. Fixation with screws 8 x 65 mm for planking 40 mm.

Accessory (not included)

- 724553 Screw ISO4014-M8x65-8.8-ga
- 780354 Washer ISO7089-8-200HV-ga
- 710342 Washer ISO7093-1-8-200HV-ga
- 711071 Nut ISO7040-M8-8-ga
- 710709 Screw DIN603-M8x65-4.8-ga-Nut

Art no.	Weight [kg]	
127633	38.700	Formwork Waler CB 150

Horizontal waler for connecting the spindle with the wall formwork.

Accessory (not included)

- 127659 Clamp Adaptor MX TR-SRU

SCS Double-Sided

Art no. Weight [kg]

127650 3.640 **Brace Connector CB**

Connector for the connection of the spindle with the Formwork Waler 150 CB.

Included in delivery

- 111147 Securing Bolt Ø16mm CB240 1 pc
- 104031 Fitting Pin Ø21x120mm 1 pc
- 018060 Cotter Pin 4/1 ga 2 pc

Art no. Weight [kg]

127659 3.980 **Clamp Adaptor MX TR-SRU**

For the connection of Formwork Waler CB 150 to the formwork.

Accessory (not included)

- 127633 Formwork Waler CB 150

Included in delivery

- 105416 Screw ISO4014-M24x80-8.8-ga 1 pc
- 022250 Nut ISO4032-M24-8-ga 1 pc

Art no. Weight [kg]

115378 1.080 **Eye Nut RCS DW15**

As an articulated connection to the Climbing Rail RCS, Steel Waler SRU for bracing with DW15.

Accessory (not included)

- 104031 Fitting Pin Ø21x120mm
- 018060 Cotter Pin 4/1 ga
- 111567 Fitting Pin Ø26x120mm
- 022230 Cotter Pin 5/1 ga

SCS Double-Sided

Art no. Weight [kg]

Tie Rods DW15

030030	1.440	Tie Rod DW15 spec. Length
030050	0.000	Cutting Cost DW15/B15

Notes

Weldable! Observe Approval! Permissible tension force 90,0 kN.

Art no. Weight [kg]

L [mm]

026417	0.000	Cutting Costs Scaffold Tube	1

Art no. Weight [kg]

017010 1.400 **Swivel Coupler SW Ø48/48mm ga**

For Scaffold Tubes Ø 48 mm.

Notes

Coupling category: B.

SCS Double-Sided

Art no.	Weight [kg]	
113762	0.884	Guardrail Conn. Plate ACS/SCS

For assembling Scaffold Tubes \varnothing 48 mm or \varnothing 60 mm as Guardrail by means of Bail Pin A64 on Guardrail Posts ACS, SCS and GT 24. Fixation by Hex. Bolt M8, M12, M16 or Wood Screw \varnothing 8 mm.

Accessory (not included)

- 110296 Clamp A64 DIN3570-M12-ga
- 710330 Nut ISO4032-M12-8.8-ga

Art no.	Weight [kg]	
051160	1.050	Handrail Connector CB

For assembling scaffold tubes on handrail posts.

Accessory (not included)

- 125956 Screw ISO4762-M8x70-8.8-ga
- 711071 Nut ISO7040-M8-8-ga
- 722356 Washer ISO7090-8-200HV

Art no.	Weight [kg]	
126228	0.030	Screw DIN603-M8x70-8.8-ga

SCS Double-Sided

Art no.	Weight [kg]	
110296	0.220	Clamp A64 DIN3570-M12-ga

For assembling Scaffold Tubes on Guardrail Posts RCS.

Notes

Wrench size SW19.

Accessory (not included)

710330 Nut ISO4032-M12-8.8-ga

Art no.	Weight [kg]	
710330	0.017	Nut ISO4032-M12-8.8-ga

Art no.	Weight [kg]	
711071	0.004	Nut ISO7040-M8-8-ga

Self-locking.

SCS Double-Sided

Art no. Weight [kg]

126088 4.390 **Guardrail Post Holder Multi**

For fixing of an end guardrail post on Girders GT 24, VT 20 or KH 80/160. Fixing of the guardrail posts by means of Screws M20.

Notes

Suitable for
 Guardrail Post RCS 226 item no.: 109720
 Guardrail Post RCS/SRU 184 item no.: 114328
 Vertical scaffold tubes
 Special post QR 50x50

Accessory (not included)

- 710285 Screw ISO4014-M8x100-8.8-ga
- 024090 Self-cleaning Nut M8 coat
- 024470 Wood Screw 6x60 SK-TX30 HPI

Art no. Weight [kg]

114328 16.600 **Guardrail Post RCS/SRU 184**

For assembly of the guardrail on the Platform Beam RCS/SRU or Guardrail Post Holder Multi.

Accessory (not included)

- 110296 Clamp A64 DIN3570-M12-ga
- 710709 Screw DIN603-M8x65-4.8-ga-Nut
- 710330 Nut ISO4032-M12-8.8-ga
- 780354 Washer ISO7089-8-200HV-ga
- 057345 Washer 9mm DIN434 ga

Included in delivery

- 114727 Screw ISO4017-M20x100-8.8-ga 2 pc
- 781053 Nut ISO7040-M20-8-ga 2 pc

SCS Double-Sided

Art no. Weight [kg]

116477 10.600 **Platform Beam Support RCS**

Support for additional Platform Beams 2 x GT 24 or VT 20 when used with Cross Beam RCS 220. With connector for Guardrail Post RCS.

Included in delivery

109612 Screw ISO4014-M24x130-8.8-ga 1 pc

105032 Nut ISO7040-M24-8-ga 1 pc

Art no. Weight [kg]

131701 45.700 **Platform Beam Supports SCS**

Bearing for double arranged platform beams. For SCS 250 and SCS 190.

Included in delivery

1 pc 724964 Screw ISO4014-M20x170-8.8-ga

4 pc 781054 Screw ISO4014-M20x160-8.8-ga

5 pc 781053 Hex-Nut ISO7040-M20-8-ga

1 pc 136880 Bolt $\varnothing 16 \times 150$ mm coat

1 pc 18060 Cotter Pin 4/1 ga

Art no. Weight [kg]

110330 0.865 **Girder Connector M20**

For the fixation of 80 mm wide decking supports made of wood on Platform Beams with suitable boring of $\varnothing 21$ mm.

Accessory (not included)

024470 Wood Screw 6x60 SK-TX30 HPI

Included in delivery

706458 Screw ISO4017-M20x40-8.8-ga 1 pc

781053 Nut ISO7040-M20-8-ga 1 pc

SCS Double-Sided

Art no. Weight [kg]

129722 0.746 **Cross Connector GT 24/VT 20**

For connecting a Girder GT 24 to a crossing Girder VT 20.

Accessory (not included)

024540 Wood Screw 6x40 SK-TX30 HPI

024470 Wood Screw 6x60 SK-TX30 HPI

Art no. Weight [kg]

129724 0.817 **Cross Connector GT 24/GT 24**

For the connection of crossing GT 24 Formwork Girders.

Accessory (not included)

024540 Wood Screw 6x40 SK-TX30 HPI

024470 Wood Screw 6x60 SK-TX30 HPI

Art no. Weight [kg]

129817 0.675 **Cross Connector VT 20/VT 20**

For the connection of crossing Girders VT 20.

Accessory (not included)

024540 Wood Screw 6x40 SK-TX30 HPI

024470 Wood Screw 6x60 SK-TX30 HPI

Art no. Weight [kg]

711084 0.420 **Screw ISO4014-M20x150-8-8-ga**

L [mm]

150

Accessory (not included)

781053 Nut ISO7040-M20-8-ga

SCS Double-Sided

Art no.	Weight [kg]	
131404	1.080	Screw-On Cou.-2 HT B Ø48mm M20

For screwing Scaffold Tubes Ø 48 mm to components up to 9 mm thickness.

Art no.	Weight [kg]	
110289	4.260	L-Angle RCS 120x120x200mm

For fixing end handrail posts on the decking.

Accessory (not included)

131404 Screw-On Cou.-2 HT B Ø48mm M20

Art no.	Weight [kg]		L [mm]
024270	0.023	Hex-Wood Screw DIN571-8x60-ga	60

Tie Rods B15

030740	1.550	Tie Rod B15 spec. Length
030050	0.000	Cutting Cost DW15/B15

Notes

Weldable! Observe Approval! Permissible tension force 82,0 kN.

SCS Double-Sided

Art no. Weight [kg]

030840 0.515 **Threaded Anchor Plate DW15**

For use with Tie Rod DW15 or B15. For anchoring in concrete.

Notes

Lost anchor part.

Art no. Weight [kg]

114158 1.030 **Screw-On Cone-2 DW20 M24 ga**

Anchor System M24. For anchoring climbing systems.

Notes

Seperate Design Information on request.

Accessory (not included)

030860 Threaded Anchor Plate DW20

Art no. Weight [kg]

030860 0.792 **Threaded Anchor Plate DW20**

For use with Tie Rod DW20, B20 or Screw-On Cone-2 M24/DW20. For anchoring in concrete.

Notes

Lost anchor part.

Art no. Weight [kg]

029270 0.331 **Advancing Screw M24 ga**

For fixing the Anchor System M24 if the plywood formlining has been drilled through.

Accessory (not included)

029280 Anchor Posit. Plate M24 ga

SCS Double-Sided

Art no. Weight [kg]

029280 0.196 **Anchor Posit. Plate M24 ga**

For fixing the Anchor System M24 if the plywood formlining has been drilled through.

Accessory (not included)

029440 Hex-Wood Screw DIN571-6x20-ga

Art no. Weight [kg]

026420 0.123 **Anchor Posit. Stud M24 ga**

For fixing Anchor System M24 if the plywood formlining is not to be drilled through.

Notes

Allen Key SW14.

Accessory (not included)

027212 Hexag. Recess Wrench SW14 long

710312 Wire Nail 3x80mm

Art no. Weight [kg]

031652 0.247 **Concrete Cone KK M24 Ø67x52mm**

For closing anchor points with Climbing Cone-2, DW15 M24 or Screw-On Cone-2 DW20 M24.

Notes

Delivery unit 50 pieces.

Accessory (not included)

131709 Sealing Adhesive-3 6-Cans-Set

SCS Double-Sided

Art no.	Weight [kg]	
131709	9.980	Sealing Adhesive-3 6-Cans-Set

For bonding PERI Concrete Cones.

Notes

See Safety Data sheet!
 Consisting of: 6 x Component A, 6 x Component B
 Component A = Net quantity / Can 459 ml / 752 g
 Component B = Net quantity / Can 356 ml / 583 g

Included in delivery

131710 Sealing Adhesive-3 Can CO-A 6 pc
 131711 Sealing Adhesive-3 Can CO-B 6 pc

Art no.	Weight [kg]		L [mm]
065027	0.359	Spacer Tube Ø22mm 200 Rough	2000

Plastic spacer tube for DW15 or B15.

Art no.	Weight [kg]	
118582	1.850	Mounting Ring SCS M30

For anchoring of the SCS Bracket at high vertical loads.

Accessory (not included)

030920 Climbing Cone-2 M30 DW20

SCS Double-Sided

Art no.	Weight [kg]	
030920	1.650	Climbing Cone-2 M30 DW20

Anchor System M30. For anchoring climbing systems.

Notes

Separate Design Information on request.

Accessory (not included)

Weldable! Take official Approval into consideration! Permissible tension force 150.0 kN.

SCS Double-Sided

Art no. Weight [kg]

030860 0.792 **Threaded Anchor Plate DW20**

For use with Tie Rod DW20, B20 or Screw-On Cone-2 M24/DW20. For anchoring in concrete.

Notes

Lost anchor part.

Art no. Weight [kg]

031653 0.364 **Concrete Cone KK M30 Ø80x52mm**

For closing anchor points with Climbing Cone-2 M30/DW20 or Screw Cone M30/DW26.

Notes

Delivery Unit 50 pieces.

Accessory (not included)

131709 Sealing Adhesive-3 6-Cans-Set

Art no. Weight [kg]

029450 0.339 **Advancing Screw M30x70 ga**

For fixing the M30 Anchor System if the plywood formlining is drilled through.

Accessory (not included)

029380 Anchor Posit. Plate M30 ga

Art no. Weight [kg]

029380 0.184 **Anchor Posit. Plate M30 ga**

For fixing the M30 Anchor System if the plywood formlining is drilled through.

Accessory (not included)

029440 Hex-Wood Screw DIN571-6x20-ga

SCS Double-Sided

Art no. Weight [kg]

026450 0.214 **Anchor Posit. Stud M30 ga**

For fixing the M30 Anchor System if the plywood formlining is not drilled through.

Accessory (not included)

027212 Hexag. Recess Wrench SW14 long

710312 Wire Nail 3x80mm

Art no. Weight [kg]

118769 1.880 **Mounting Bolt SCS M36**

For anchoring of the SCS Bracket at high tension forces.

Accessory (not included)

030940 Climbing Cone-2 M36 DW26

Art no. Weight [kg]

118772 2.550 **Mounting Ring SCS M36**

For anchoring of the SCS Bracket at high tension forces and vertical loads.

Accessory (not included)

030940 Climbing Cone-2 M36 DW26

SCS Double-Sided

Art no.	Weight [kg]	
030940	2.980	Climbing Cone-2 M36 DW26

Tie System M36. For anchoring of climbing systems.

Notes

Separate Design Information on request.

Accessory (not included)

030870	Threaded Anchor Plate DW26
030340	Tie Rod DW26 spec. Length
029430	Screw ISO4017-M36x70-8.8-ga

Art no.	Weight [kg]	
Tie Rods DW26		
030340	4.480	Tie Rod DW26 spec. Length
030500	0.000	Cutting Costs DW26

Notes

Weldable! Take official approval into consideration! Permissible tension force 250.0 kN.

Art no.	Weight [kg]	
030870	1.260	Threaded Anchor Plate DW26

For use with Tie Rod DW26 or Screw-On Cone M36/DW26. For anchoring in concrete.

Notes

Lost anchor part.

SCS Double-Sided

Art no.	Weight [kg]	
031654	0.512	Concrete Cone KK M36 Ø90x52mm

For closing anchor points with Climbing Cone-2 M36/DW26.

Notes

Delivery unit 50 pieces.

Accessory (not included)

131709 Sealing Adhesive-3 6-Cans-Set

Art no.	Weight [kg]	
029390	0.170	Anchor Posit. Plate M36 ga

For fixing the M36 anchor system if the plywood formlining is drilled through.

Accessory (not included)

029440 Hex-Wood Screw DIN571-6x20-ga

Art no.	Weight [kg]		L [mm]
029430	0.930	Screw ISO4017-M36x70-8.8-ga	70

Bolt for anchoring of climbing systems and as advancing bolt.

Art no.	Weight [kg]	
026460	0.308	Anchor Posit. Stud M36 ga

For fixing the M36 anchor system if the plywood formlining is not drilled through.

Accessory (not included)

027212 Hexag. Recess Wrench SW14 long

710312 Wire Nail 3x80mm

SCS Double-Sided

Art no. Weight [kg]

123819 9.610 **Bracing Shoe SCS DW20 M36**

Used as compression point at starter sections with optional connections to Scaffold Tube Bracing Ø 48 mm, Vertical Tie Rod DW20 Suspension, Climbing Anchor M36, Diagonal Strut SCS or Heavy Duty Spindle SCS.

Accessory (not included)

029420 Screw ISO4017-M30x70-8.8-ga

029430 Screw ISO4017-M36x70-8.8-ga

Included in delivery

017040 Screw-On Coupler DK 48 ga 1 pc

Art no. Weight [kg]

030580 0.371 **Hex-Nut DW20 SW36 60mm weldab**

For anchoring with Tie Rod DW20 or B20.

Notes

Weldable! Permissible load 150.0 kN.

Art no. Weight [kg]

114082 2.860 **Counterplate RCS DW20**

Counterplate with centring for anchoring through the Climbing Rail RCS.

SCS Double-Sided

Art no.	Weight [kg]		L [mm]	N
Climbing Rails RCS				
114166	78.200	Climbing Rail RCS 148	1480	2
135990	105.000	Climbing Rail RCS 198	1980	3
109469	130.000	Climbing Rail RCS 248	2480	4
112102	156.000	Climbing Rail RCS 298	2980	5
109470	182.000	Climbing Rail RCS 348	3480	6
112141	209.000	Climbing Rail RCS 398	3980	7
109471	262.000	Climbing Rail RCS 498	4980	9
109472	393.000	Climbing Rail RCS 748	7480	14
109610	524.000	Climbing Rail RCS 998	9980	19

Steel profile for all-purpose use of climbing application or civil constructions.
With Spacers M20x82mm and M24x82mm.

Notes

Wy = 357.6 cm³, Iy = 3576 cm⁴.

Accessory (not included)

136109 Pin Set RCS MAX

SCS Double-Sided

Art no.	Weight [kg]	
030990	0.786	Wingnut DW20 ga

For anchoring with Tie Rod DW20 or B20.

Notes

Permissible load 150.0 kN.

Art no.	Weight [kg]	
051250	2.790	Tension Belt 570/25kN

For preventing climbing systems tipping over due to the wind.

Notes

Follow relevant Instructions for Assembly and Use for the system.
Permissible tensile force 2.5 t.

Art no.	Weight [kg]	
110469	1.660	Belt Connector Wall M36

To connect Tension Belt to the previous anchor M30 or M36.

Accessory (not included)

029420 Screw ISO4017-M30x70-8.8-ga

SCS Double-Sided

Art no.	Weight [kg]	
129693	3.130	Tension Anchor Connect. CB/SCS

For connecting the wind suspension with Tie Rod DW15 to the Crossbeam Unit SCS 250 / 190 or CB Climbing Bracket.

Accessory (not included)

- 711078 Screw ISO4014-M20x130-8.8-ga
- 781053 Nut ISO7040-M20-8-ga

Art no.	Weight [kg]	
107008	4.120	Tension Anchor Connector Wall

Alternative wall connector to prevent tipping over due to wind loads with Tie Rod DW15. Including Turnbuckle CB M20/DW15.

Accessory (not included)

- 026430 Screw ISO4014-M24x70-10.9

Included in delivery

- 027170 Pin Ø16x42mm ga 1 pc
- 018060 Cotter Pin 4/1 ga 1 pc

Art no.	Weight [kg]		L [mm]
026430	0.334	Screw ISO4014-M24x70-10.9	70

High-strength bolt for anchoring climbing systems.

Art no.	Weight [kg]	
116532	1.890	Tie Yoke VARIOKIT Ø22mm DW15

For assembling in Steel Waler SRU.

SCS Double-Sided

Art no.	Weight [kg]	
115375	6.100	Articulated Spanner RCS DW15

For tensioning and as an articulated connection to the Climbing Rail RCS, Steel Waler SRU or Bracing Shoe RCS for bracing with DW15.

Accessory (not included)

- 030030 Tie Rod DW15 spec. Length
- 030070 Hex-Nut DW15 SW30 50mm ga
- 104031 Fitting Pin Ø21x120mm
- 018060 Cotter Pin 4/1 ga
- 111567 Fitting Pin Ø26x120mm
- 022230 Cotter Pin 5/1 ga

Art no.	Weight [kg]	
116807	1.850	Turnbuckle CB Ø25-M20/DW15

For tensioning of Tie Rod DW15.

Included in delivery

- 711059 Turnbuckle CB coat 1 pc
- 711060 Eyebolt M20 left coat 1 pc

Art no.	Weight [kg]	
051260	3.300	Belt Connector CB

To prevent tipping over due to wind loads with tension belt.

Accessory (not included)

- 051250 Tension Belt 570/25kN
- 051270 Belt Connector Wall M24
- 116752 Belt Connector Wall M24 CB

Included in delivery

- 710219 Screw ISO4014-M16x100-8.8-ga 1 pc
- 070890 Nut ISO7040-M16-8-ga 1 pc

SCS Double-Sided

Art no. Weight [kg]

051270 1.620 **Belt Connector Wall M24**

Wall connector to prevent tipping over due to wind loads with tension belt for Climbing Systems CB and FB.

Accessory (not included)

026430 Screw ISO4014-M24x70-10.9

Art no. Weight [kg]

030090 0.402 **Hex-Nut DW15 SW30 108mm ga**

For coupling Tie Rod DW15 or B15.

Notes

Permissible load 90.0 kN.

Art no. Weight [kg]

030070 0.222 **Hex-Nut DW15 SW30 50mm ga**

For anchoring with Tie Rod DW15 or B15.

Art no. Weight [kg]

129831 2.740 **Bracing Shoe SCS M30/M24**

To connect wind suspension to the previous anchor.

Accessory (not included)

026430 Screw ISO4014-M24x70-10.9

123843 Screw ISO4017-M30x80-10.9

Included in delivery

104031 Fitting Pin Ø21x120mm 1 pc

018060 Cotter Pin 4/1 ga 1 pc

SCS Double-Sided

Art no. Weight [kg]

137280 0.652 **Screw ISO4017-M30x70-10.9**

Bolt for fixing Tension Anchor Connector Wall to M30 cones

Art no. Weight [kg]

030100 0.439 **Wingnut DW15 ga**

For anchoring with Tie Rod DW15 or B15.

Notes

Permissible load 90.0 kN.

Art no. Weight [kg]

030370 1.660 **Wingnut Pivot Plate DW15 ga**

For anchoring with Tie Rod DW15 or B15.

With articulated, captive nut. Maximum inclination of anchor: $\pm 8^\circ$.

Notes

Wrench size SW27.

Permissible load 90,0 kN.

Art no. Weight [kg]

030110 0.799 **Wingnut Counterplate DW15 ga**

For anchoring with Tie Rod DW15 or B15.

Notes

Permissible load 90.0 kN.

SCS Double-Sided

Art no.	Weight [kg]		L [mm]
072180	0.560	Ratchet Wrench 1/2"	300

Art no.	Weight [kg]		L [mm]
029610	5.300	Ratchet Wrench 1"	900

Art no.	Weight [kg]	
123751	0.216	Socket SW19 1/2"

Fits to Hex. Bolts M12. To operate the Carriage SCS with Drive Shaft SW19.

Art no.	Weight [kg]	
104823	0.175	Socket SW30 1/2"

Fits to Hex. Bolts M20. To operate the Adjusting Unit SCS.

Art no.	Weight [kg]	
029630	0.580	Socket SW46 1"

Fits to Hex.Screws M12 or Height Adjusting Unit SCS.

Art no.	Weight [kg]	
029640	1.000	Socket SW55 1"

Fits to DW26 and Hex. Bolts M36.

SCS Double-Sided

Art no. Weight [kg]

123750 0.776 **Hexagon. Socket SW27 1"**

Fits to Screw ISO4762-M36.

Art no. Weight [kg]

027212 0.445 **Hexag. Recess Wrench SW14 long**

Fits PERI Positioning Discs and Allen Key Bolts M16.

Art no. Weight [kg]

118575 16.800 **Adjusting Unit SCS**

Spare part for Crossbeam Unit SCS.

Included in delivery

- 710219 Screw ISO4014-M16x100-8.8-ga 2 pc
- 070890 Nut ISO7040-M16-8-ga 2 pc
- 111567 Fitting Pin Ø26x120mm 3 pc
- 022230 Cotter Pin 5/1 ga 3 pc

Art no. Weight [kg]

118580 5.500 **Spindle Connector SCS Ø26/21mm**

Spare part for Strongback SCS.

Included in delivery

- 104031 Fitting Pin Ø21x120mm 2 pc
- 018060 Cotter Pin 4/1 ga 2 pc

SCS Double-Sided

Art no. Weight [kg]

118690 23.500 **Carriage SCS**

Spare part for Crossbeam Unit SCS 250.

Included in delivery

103740 Screw ISO4016-M16x280-4.6ga-Nu 2 pc
070890 Nut ISO7040-M16-8-ga 2 pc

Art no. Weight [kg]

126431 12.300 **Hatch-2 RCS 55x60 foldable**

Self-closing hatch for ladder access. Clear opening approx. 55 x 60 cm.
Ladder fixation with bolts or by hanging up.

Accessory (not included)

024540 Wood Screw 6x40 SK-TX30 HPI
710224 Screw ISO4017-M12x40-8.8-ga
710381 Nut ISO7040-M12-8-ga

Included in delivery

126785 Hatch Hinge RCS 1 pc
108647 Riv.ISO15979-5x20-St/St 12 pc
022230 Cotter Pin 5/1 ga 2 pc

SCS Double-Sided

Art no.	Weight [kg]	
110608	15.600	Hatch 55x60 foldable

Self-closing hatch for ladder access. Clear opening approx. 55 x 60 cm. Ladder fixation with bolts.

Accessory (not included)

- 710224 Screw ISO4017-M12x40-8.8-ga
- 710381 Nut ISO7040-M12-8-ga

Included in delivery

- 110529 Hatch Artic. Plate le coat 1 pc
- 110535 Hatch Artic. Plate ri coat 1 pc
- 721412 Rivet ISO15979-4.8x12-St/St 8 pc

Art no.	Weight [kg]	
051430	37.900	Sliding Hatch

Non self-closing hatch for ladder access. Clear opening approx. 73 x 55 cm. Ladder fixation with bolts.

Accessory (not included)

- 024540 Wood Screw 6x40 SK-TX30 HPI

Included in delivery

- 710266 Screw ISO4017-M12x25-8.8-ga 4 pc
- 710381 Nut ISO7040-M12-8-ga 4 pc

SCS Double-Sided

Art no. Weight [kg]

051410 11.700 **Ladder 180/6**

For accessing PERI Formwork Systems.

Included in delivery

710224 Screw ISO4017-M12x40-8.8-ga 4 pc

710381 Nut ISO7040-M12-8-ga 4 pc

Art no. Weight [kg]

051420 12.800 **Ladder 220/6**

As access for PERI Formwork Systems.

Included in delivery

710224 Screw ISO4017-M12x40-8.8-ga 4 pc

710381 Nut ISO7040-M12-8-ga 4 pc

Art no. Weight [kg]

103724 10.400 **End Ladder 180/2 cpl**

As access for PERI Formwork Systems.

Included in delivery

710224 Screw ISO4017-M12x40-8.8-ga 4 pc

710381 Nut ISO7040-M12-8-ga 4 pc

SCS Double-Sided

Art no. Weight [kg]

109105 5.070 **Ladder Base 30 ga**

For horizontal fixing of ladders on the platform decking.

Art no. Weight [kg]

051460 2.180 **Ladder Base ga**

As bottom ladder connection and for securing ladders against sliding on the scaffold decks.

Art no. Weight [kg]

103718 0.684 **Ladder Hook**

For adjusting the bottom ladder. Always use in pairs.

Included in delivery

710266 Screw ISO4017-M12x25-8.8-ga 2 pc

710381 Nut ISO7040-M12-8-ga 2 pc

Art no. Weight [kg]

Ladder Safety Cage

104132 15.600 **Ladder Safety Cage 75**

051450 25.200 **Ladder Safety Cage 150**

Ladder cage for PERI Ladder Access.

Included in delivery

710266 Screw ISO4017-M12x25-8.8-ga 4 pc

701763 Clamping Plate FL 25x10x90mm 4 pc

SCS Double-Sided

Art no. Weight [kg]

111165	8.100	Ladder Connector VARIO adj.
--------	-------	------------------------------------

For connecting ladders to Steel Walers SRZ or SRU Profile U100 – U120.

Included in delivery

- 710266 Screw ISO4017-M12x25-8.8-ga 2 pc
- 701763 Clamping Plate FL 25x10x90mm 2 pc

Art no. Weight [kg]

129805	8.800	Ladder Connector VARIO/SCS
--------	-------	-----------------------------------

For connecting ladders to Steel Walers SRZ and SRU (U100 - U120) when using Platform Beam SCS 120.

Art no. Weight [kg] L [mm]

710224	0.047	Screw ISO4017-M12x40-8.8-ga	40
--------	-------	------------------------------------	----

Art no. Weight [kg]

710381	0.017	Nut ISO7040-M12-8-ga
--------	-------	-----------------------------

Self-locking.
